

Navigating Through the Test

During this test, you can use the mouse OR the keyboard to move through the screens.

You can use the following standard keys on the keyboard:

Tab 

Press the Tab key to move from one selectable element on the page to the next. The current selectable element will be indicated by a thin blue border.

Examples of selectable elements:

- Buttons on the menu toolbar
- Answer options for test questions

Shift  and **Tab** 

Press the Shift and Tab keys to reverse direction through the selectable elements.

Spacebar 

Press the spacebar key to select an element. Press the spacebar key again to deselect the element.

Up  and **Down** 

Use the up and down arrows to scroll vertically.

Select **Continue** to proceed.

- Creating a disturbance or disruptive behavior in any form will not be tolerated. The test administrator has sole discretion in determining what constitutes disruptive behavior.
- Attempting to give or receive assistance or communication in any form is not permitted during the test administration. Discussion or sharing of test content or answers during the test administration, including breaks, and after the test administration, is prohibited.
- Removing or attempting to remove test content from the test center. Under no circumstances may test content or any part of the test content be removed, reproduced and/or disclosed by any means (e.g., hard copy, verbally, electronically) to any person or entity.
- Tampering with a computer during a computer-delivered test administration
- Attempting to remove scratch paper (either partially or in its entirety) from the computer-delivered testing room or using scratch paper before the test, during untimed sections of the test or during breaks
- Bringing food, beverages or tobacco into the testing room
- Bringing a weapon or firearm into the test center
- Leaving the test center vicinity during the test session or during breaks
- Leaving the testing room without permission. You are not permitted to go outside the test center building unless it is to use the restroom during the test administration, including breaks.
- Taking excessive or extended unscheduled breaks during the test session. Test center administrators are required to strictly monitor unscheduled breaks and report test takers who take excessive or extended breaks.
- Failing to follow any of the test administration regulations contained in the *GRE Information Bulletin*, on the GRE website, given by the test administrator or specified in any test materials

ETS reserves the right to take action for failure to comply with test administration regulations or the test administrator's directions. Such action may include, but is not limited to, barring you from future testing and/or withholding or canceling your scores. If your scores are canceled, they will not be reported, and your registration and test fees will not be refunded. Reports of cheating or fraud will be investigated thoroughly and offenders may be prosecuted to the full extent of the applicable laws.

Select **Continue** to proceed.

Select one entry for the blank. Fill the blank in the way that best completes the text.

Wood is an environmentally friendly building material because it _____ carbon dioxide, absorbing it during growth and retaining it even after it has been turned into lumber.

disperses
eradicates
sequesters
respires
regulates

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Sports prodigies are often viewed as geniuses whose innate abilities (i)_____ coaching, but the newest sensation in Alpine skiing (ii)_____ that stereotype: she' s as stark an example of nurture over nature, of work over talent, as anyone in the world of sports.

Blank (i)

often inspire
generally demand
nearly obviate

Blank (ii)

condones
scuttles
perpetuates

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Perhaps the best one can say of this new book of criticism is that it is scintillatingly (i)_____. The author is adept at dealing with trivial details in the poets he studies, but he is quite (ii)_____ when it comes to illuminating the overall vision. The verbal intricacy and panache of his writing contrast with its conceptual (iii)_____. If there are very few authentic ideas in the poems under consideration, there is also a shortage of them in the author's commentary.

Blank (i)

perceptive
risqué
shallow

Blank (ii)

indifferent
accomplished
argumentative

Blank (iii)

complexity
rigor
poverty

Select one entry from each column.

Questions 4 and 5 are based on this passage.

Recent studies of ancient Maya water management have found that the urban architecture of some cities was used to divert rainfall runoff into gravity-fed systems of interconnected reservoirs. In the central and southern Maya Lowlands, this kind of water control was necessary to support large populations throughout the year due to the scarcity of perennial surface water and the seasonal availability of rainfall. Some scholars argue that the concentration of water within the urban core of these sites provided a centralized source of political authority for Maya elites based largely on controlled water access. Such an argument is plausible; however, it is less useful for understanding the sociopolitical implications of water use and control in other, water-rich parts of the Maya region.

The author of the passage implies which of the following about the political import of the type of urban water management system described in the passage?

- ☐ Because the system was centralized, it allowed political control over a widely scattered population.
- ☐ The knowledge required to design and maintain the system became the pretext for Maya elites' political authority.
- ☐ By selectively limiting access to water, Maya elites used the system to curb challenges to their authority.
- ☐ The system is not sufficient to explain the sources of centralized political power in all parts of the Maya region.
- ☐ The system's continued maintenance required political authorities to exert control over an increasing proportion of economic resources.

Select one answer choice.

Questions 4 and 5 are based on this passage.

Recent studies of ancient Maya water management have found that the urban architecture of some cities was used to divert rainfall runoff into gravity-fed systems of interconnected reservoirs. Questions 10 to 12 are based on this passage.

Early-twentieth-century scholars who studied Paleolithic cave paintings in Europe could discern in the paintings no principles of composition. In each instance, the vividly rendered animal figures were not represented as though they occupied a common pictorial space in accordance with modern—that is, postmedieval—conventions of Western art, but seemed arbitrarily scattered and presented at varying scales. Influenced by then-fashionable anthropological theories about “savage” peoples, these scholars concluded that Paleolithic imagery was a by-product of “sympathetic magic”—the animal figures had been drawn in order to ensure hunters’ success. In the 1960s, however, Leroi-Gourhan argued that these Paleolithic representations were not random assemblages but rather evinced a systematic pattern in the way animals of different species were grouped. Noting that the animal groupings depicted in the paintings are unlikely to have occurred in nature, Leroi-Gourhan argued that the painted figures reflected a complex body of thought in which the systematic opposition of certain species of animals may represent polarized male and female principles.

The passage suggests that Leroi-Gourhan’s argument that the Paleolithic cave paintings “reflected a complex body of thought” was based partly on which of the following considerations?

- ☐ The paintings seemed to represent imagined rather than observed phenomena.
- ☐ The paintings conformed in certain subtle ways to the conventions of modern Western art.
- ☐ The paintings exhibited no discernible principles of composition.
- ☐ The paintings were probably created in order to ensure hunters’ success.
- ☐ The painted figures were skillfully executed, though arbitrarily arranged.

Select one answer choice.

Questions 10 to 12 are based on this passage.

Early-twentieth-century scholars who studied Paleolithic cave paintings in Europe could discern in the paintings no principles of composition. In each instance, the vividly rendered animal figures were not represented as though they occupied a common pictorial space in accordance with modern—that is, postmedieval—conventions of Western art, but seemed arbitrarily scattered and presented at varying scales. Influenced by then-fashionable anthropological theories about “savage” peoples, these scholars concluded that Paleolithic imagery was a by-product of “sympathetic magic”—the animal figures had been drawn in order to ensure hunters’ success. In the 1960s, however, Leroi-Gourhan argued that these Paleolithic representations were not random assemblages but rather evinced a systematic pattern in the way animals of different species were grouped. Noting that the animal groupings depicted in the paintings are unlikely to have occurred in nature, Leroi-Gourhan argued that the painted figures reflected a complex body of thought in which the systematic opposition of certain species of animals may represent polarized male and female principles.

It can be inferred from the passage that both Leroi-Gourhan and the “early-twentieth-century scholars” would agree with which of the following statements?

- ☐ The Paleolithic painters of the animal figures in caves probably cared relatively little about the placement of the figures in relation to one another.
- ☐ The Paleolithic painters of the animal figures in caves cannot accurately be described as “savage” peoples.
- ☐ Certain aspects of the Paleolithic cave paintings probably reflect a belief in “sympathetic magic.”
- ☐ The animal figures in the cave paintings were placed in such a way that they did not appear to occupy a common pictorial space in accordance with modern conventions of Western art.
- ☐ The vivid rendering of the animal figures in Paleolithic caves suggests that those who painted them placed a higher premium on realism than on other aesthetic principles.

Select one answer choice.

Questions 10 to 12 are based on this passage.

Early-twentieth-century scholars who studied Paleolithic cave paintings in Europe could discern in the paintings no principles of composition. In each instance, the vividly rendered animal figures were not represented as though they occupied a common pictorial space in accordance with modern—that is, postmedieval—conventions of Western art, but seemed arbitrarily scattered and presented at varying scales. Influenced by then-fashionable anthropological theories about “savage” peoples, these scholars concluded that Paleolithic imagery was a by-product of “sympathetic magic”—the animal figures had been drawn in order to ensure hunters’ success. Questions 10 to 12 are based on this passage.

Early-twentieth-century scholars who studied Paleolithic cave paintings in Europe could discern in the paintings no principles of composition. In each instance, the vividly rendered animal figures were not represented as though they occupied a common pictorial space in accordance with modern—that is, postmedieval—conventions of Western art, but seemed arbitrarily scattered and presented at varying scales. Influenced by then-fashionable anthropological theories about “savage” peoples, these scholars concluded that Paleolithic imagery was a by-product of “sympathetic magic”—the animal figures had been drawn in order to ensure hunters’ success. In the 1960s, however, Leroi-Gourhan argued that these Paleolithic representations were not random assemblages but rather evinced a systematic pattern in the way animals of different species were grouped. Noting that the animal groupings depicted in the paintings are unlikely to have occurred in nature, Leroi-Gourhan argued that the painted figures reflected a complex body of thought in which the systematic opposition of certain species of animals may represent polarized male and female principles.

Which of the following best summarizes the approach to the cave paintings taken by the “early-twentieth-century scholars”?

- ☐ They emphasized what they saw as the artistic flaws in the paintings, overlooking the naturalistic rendering of individual animal figures.
- ☐ In order to make sense of the absence of certain formal characteristics of the paintings, they looked for an explanation outside the realm of aesthetics.
- ☐ Because they looked in the paintings for principles of composition common in modern Western art, they assumed that the animal figures depicted must have been intended to appear to occupy a common space.
- ☐ Because they were concerned with the aesthetic characteristics of the paintings, they overlooked the paintings’ anthropological significance.
- ☐ They tried to interpret the paintings in terms of then-fashionable aesthetic theories, assuming that the principles of composition common in Western art would not apply.

Quantitative Reasoning

12 Questions

21 minutes (standard time)

For each question, indicate the best answer, using the directions given. If you need more detailed directions, select **Help** at any time.

An on-screen calculator is available for each question in this section. To use the calculator, select the calculator button.

If a question has answer choices with **ovals** ☐, then the correct answer consists of a single choice. If a question has answer choices with **square boxes** ☐, then the correct answer consists of one or more answer choices. Read the directions for each question carefully. The directions will indicate if you should select one or more answer choices. To answer questions based on a data presentation, you may need to scroll or use your keyboard to access the entire presentation.

All numbers used are real numbers.

All figures are assumed to lie in a plane unless otherwise indicated.

Geometric figures, such as lines, circles, triangles, and quadrilaterals, **are not necessarily** drawn to scale. That is, you should **not** assume that quantities such as lengths and angle measures are as they appear in a figure. You should assume, however, that lines shown as straight are actually straight, points on a line are in the order shown, and more generally, all geometric objects are in the relative positions shown. For questions with geometric figures, you should base your answers on geometric reasoning, not on estimating or comparing quantities by sight or by measurement.

Coordinate systems, such as xy -planes and number lines, **are** drawn to scale; therefore you can read, estimate, or compare quantities in such figures by sight or by measurement.

Graphical data presentations, such as bar graphs, circle graphs, and line graphs, **are** drawn to scale; therefore, you can read, estimate, or compare data values by sight or by measurement.

Select **Continue** to proceed.

$$4^t + 4^t = 2^n$$

Quantity A

$2t$

Quantity B

Questions 5 and 6 are based on this passage.

Astronomers who study planet formation once believed that comets—because they remain mostly in the distant Oort cloud, where temperatures are close to absolute zero—must be pristine relics of the material that formed the outer planets. The conceptual shift away from seeing comets as pristine relics began in the 1970s, when laboratory simulations revealed there was sufficient ultraviolet radiation reaching comets to darken their surfaces and there were sufficient cosmic rays to alter chemical bonds or even molecular structure near the surface. Nevertheless, astronomers still believed that when a comet approached the Sun—where they could study it—the Sun’s intense heat would remove the corrupted surface layer, exposing the interior. About the same time, though, scientists realized comets might contain decaying radioactive isotopes that could have warmed cometary interiors to temperatures that caused the interiors to evolve.

The author suggests that the realization described in the final sentence of the passage had which of the following effects?

- ☐ It introduced a new topic for study by astronomers interested in planetary formation.
- ☐ It led astronomers to adopt a number of different strategies in trying to determine the composition of cometary interiors.
- ☐ It called into question an assumption that astronomers had made about comets.
- ☐ It cast doubt on astronomers’ ability to study the interior parts of comets.
- ☐ It caused astronomers to revise their account of the composition of the outer planets.

Select one answer choice.

Questions 5 and 6 are based on this passage.

Astronomers who study planet formation once believed that comets—because they remain mostly in the distant Oort cloud, where temperatures are close to absolute zero—must be pristine relics of the material that formed the outer planets. The conceptual shift away from seeing comets as pristine relics began in the 1970s, when laboratory simulations revealed there was sufficient ultraviolet radiation reaching comets to darken their surfaces and there were sufficient cosmic rays to alter chemical bonds or even molecular structure near the surface. Nevertheless, astronomers still believed that when a comet approached the Sun—where they could study it—the Sun's intense heat would remove the corrupted surface layer, exposing the interior. About the same time, though, scientists realized comets might contain decaying radioactive isotopes that could have warmed cometary interiors to temperatures that caused the interiors to evolve.

Consider each of the choices separately and select all that apply.

According to the passage, astronomers' belief that comets are pristine relics was

- ☐ overturned by analysis of what happens when comets approach the Sun
- ☐ supported by what observations revealed about the composition of the outer planets
- ☐ based on consideration of the conditions that prevail where comets are located

Select one or more answer choices.

Questions 7 to 9 are based on this passage.

Some archaeologists speculate that the Americas might have been initially colonized between 40,000 and 25,000 years ago. However, to support this theory it is necessary to explain the absence of generally accepted habitation sites for that time interval in what is now the United States. Australia, which has a smaller land area than the United States, has many such sites, supporting the generally accepted claim that the continent was colonized by humans at least 40,000 years ago. Australia is less densely populated (resulting in lower chances of discovering sites) and with its overall greater aridity would have presented conditions less favorable for hunter-gatherer occupation. Proportionally, at least as much land area has been lost from the coastal regions of Australia because of postglacial sea-level rise as in the United States, so any coastal archaeological record in Australia should have been depleted about as much as a coastal record in the United States. Since there are so many resource-rich rivers leading inland from the United States coastline, it seems implausible that a growing population of humans would have confined itself to coasts for thousands of years. If inhabitants were present 25,000 years ago, the chances of their appearing in the archaeological record would seem to be greater than for Australia.

The passage is primarily concerned with doing which of the following?

- ☐ Presenting an objection to a claim
- ☐ Accounting for an apparent anomaly
- ☐ Outlining an alternative interpretation
- ☐ Correcting a particular misconception
- ☐ Questioning the validity of a comparison

Select one answer choice.

Questions 7 to 9 are based on this passage.

Some archaeologists speculate that the Americas might have been initially colonized between 40,000 and 25,000 years ago. However, to support this theory it is necessary to explain the absence of generally accepted habitation sites for that time interval in what is now the United States. Australia, which has a smaller land area than the United States, has many such sites, supporting the generally accepted claim that the continent was colonized by humans at least 40,000 years ago. Australia is less densely populated (resulting in lower chances of discovering sites) and with its overall greater aridity would have presented conditions less favorable for hunter-gatherer occupation. Proportionally, at least as much land area has been lost from the coastal regions of Australia because of postglacial sea-level rise as in the United States, so any coastal archaeological record in Australia should have been depleted about as much as a coastal record in the United States. Since there are so many resource-rich rivers leading inland from the United States coastline, it seems implausible that a growing population of humans would have confined itself to coasts for thousands of years. If inhabitants were present 25,000 years ago, the chances of their appearing in the archaeological record would seem to be greater than for Australia.

The author of the passage notes Australia's "smaller land area" in order to

- ☐ suggest that the number of habitation sites from between 40,000 and 25,000 years ago that have been found in Australia is somewhat surprising
- ☐ help show why the absence of habitation sites from between 40,000 and 25,000 years ago in what is now the United States is problematic
- ☐ indicate that Australia is not exactly comparable to the United States in size
- ☐ emphasize a difference between Australia and the United States in population density
- ☐ help explain a difference between Australia and the United States in the number of habitation sites from between 40,000 and 25,000 years ago

Select one answer choice.

Questions 7 to 9 are based on this passage.

Some archaeologists speculate that the Americas might have been initially colonized between 40,000 and 25,000 years ago. However, to support this theory it is necessary to explain the absence of generally accepted habitation sites for that time interval in what is now the United States. Australia, which has a smaller land area than the United States, has many such sites, supporting the generally accepted claim that the continent was colonized by humans at least 40,000 years ago. Australia is less densely populated (resulting in lower chances of discovering sites) and with its overall greater aridity would have presented conditions less favorable for hunter-gatherer occupation. Proportionally, at least as much land area has been lost from the coastal regions of Australia because of postglacial sea-level rise as in the United States, so any coastal archaeological record in Australia should have been depleted about as much as a coastal record in the United States. Since there are so many resource-rich rivers leading inland from the United States coastline, it seems implausible that a growing population of humans would have confined itself to coasts for thousands of years. If inhabitants were present 25,000 years ago, the chances of their appearing in the archaeological record would seem to be greater than for Australia.

The author of the passage implies that, in what is now the United States, archaeological evidence of inhabitation in the period from 40,000 to 25,000 years ago is lacking because that region

- ☐ had its oldest habitation sites inundated following a postglacial rise in sea level
- ☐ has many resource-rich rivers that facilitated the dispersal of its early inhabitants from an initial concentration in coastal areas
- ☐ was sparsely populated until about 25,000 years ago
- ☐ was colonized less than 25,000 years ago
- ☐ was inhabited only by hunter-gatherers until 25,000 years ago

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The company is so old-fashioned and opposed to innovation that it can seem downright _____.

- ☐ antediluvian
- ☐ flighty
- ☐ archaic
- ☐ chauvinistic
- ☐ capricious
- ☐ patronizing

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Because the political situation seriously impeded international communication, French scientific research was at that time uncharacteristically _____.

- ☐ biased
- ☐ insular
- ☐ competitive
- ☐ misleading
- ☐ deceptive
- ☐ parochial

Select two answer choices.

Select two answer choices.

Question 13 is based on this passage.

In a remote area of Cleland County, there are large, privately owned land parcels with privately constructed and maintained roads crossing them. Drivers use the private roads as shortcuts, so these roads are traveled as much as the area's public roads. Only the public roads are subject to strict safety regulations about construction and upkeep; nevertheless, the two kinds of road have similar accident rates. Clearly, the regulations do nothing to improve safety conditions on these remote public roads.

Which of the following, if true, most seriously weakens the argument?

- ☐ The regulations require the area's public roads to be inspected several times a year to determine whether they meet mandated standards.
- ☐ The area's private roads do not meet the standards that regulations impose on the public roads.
- ☐ Accidents on the area's public roads are more serious on the whole than accidents on the private roads.
- ☐ Almost all drivers on the area's private roads are familiar with these roads.
- ☐ The regulations governing the public roads have generally been written with an eye to safety on roads with high traffic volume rather than on roads in remote areas.

- ☐ The regulations governing the public roads have generally been written with an eye to safety on roads with high traffic volume rather than on roads in remote areas.

Select one answer choice.

Questions 14 and 15 are based on this passage.

In 1961, Julia Child published *Mastering the Art of French Cooking*, frequently described as revolutionary. According to legend, Child inspired Americans to exchange their bland cooking for French cuisine's rich flavors. Yet Child's book was hardly singular among cookbooks. One publishing catalog lists almost as many books about French cooking in the decade before Child's book as in the decade after. While Child's book influenced a particular American cohort, its effect on the American publishing industry was minimal, a fact at odds with popular assumptions both about publishers and about Child's importance. We might expect Child's success to foster many imitators. Instead American cookbooks pursued themes popular before Child's book was published, including a growing interest in the American cooking styles allegedly vanquished by Child.

- The author mentions the "cohort" primarily to
- ☐ refute the supposed homogeneity of American preferences in food
 - ☐ place a particular debate within its relevant historical context
 - ☐ acknowledge some truth in a view that is otherwise inaccurate
 - ☐ emphasize the inadequacy of a common assumption about French cuisine
 - ☐ challenge a particular view of what made Child's book popular

Select one answer choice.

Questions 14 and 15 are based on this passage.

In 1961, Julia Child published *Mastering the Art of French Cooking*, frequently described as revolutionary. According to legend, Child inspired Americans to exchange their bland cooking for French cuisine's rich flavors. Yet Child's book was hardly singular among cookbooks. One publishing catalog lists almost as many books about French cooking in the decade before Child's book as in the decade after. While Child's book influenced a particular American cohort, its effect on the American publishing industry was minimal, a fact at odds with popular assumptions both about publishers and about Child's importance. Questions 14 and 15 are based on this passage.

In 1961, Julia Child published *Mastering the Art of French Cooking*, frequently described as revolutionary. According to legend, Child inspired Americans to exchange their bland cooking for French cuisine's rich flavors. Yet Child's book was hardly singular among cookbooks. One publishing catalog lists almost as many books about French cooking in the decade before Child's book as in the decade after. While Child's book influenced a particular American cohort, its effect on the American publishing industry was minimal, a fact at odds with popular assumptions both about publishers and about Child's importance. We might expect Child's success to foster many imitators. Instead American cookbooks pursued themes popular before Child's book was published, including a growing interest in the American cooking styles allegedly vanquished by Child.

It can be inferred from the passage that the "growing interest"

- ☐ has been mischaracterized by some observers of American culinary trends of the 1960s
- ☐ would not have occurred if Child's book had been the watershed some believed it was
- ☐ reflected Americans' aspirations to be perceived as sophisticated about food and cooking
- ☐ bolstered certain trends in the publishing industry that accelerated the release of new cookbooks
- ☐ confirms Child's influence on at least one segment of the American public

Quantitative Reasoning

15 Questions

26 minutes (standard time)

For each question, indicate the best answer, using the directions given. If you need more detailed directions, select **Help** at any time.

An on-screen calculator is available for each question in this section. To use the calculator, select the calculator button.

If a question has answer choices with **ovals** , then the correct answer consists of a single choice. If a question has answer choices with **square boxes** , then the correct answer consists of one or more answer choices. Read the directions for each question carefully. The directions will indicate if you should select one or more answer choices. To answer questions based on a data presentation, you may need to scroll or use your keyboard to access the entire presentation.

All numbers used are real numbers.

All figures are assumed to lie in a plane unless otherwise indicated.

Geometric figures, such as lines, circles, triangles, and quadrilaterals, **are not necessarily** drawn to scale. That is, you should **not** assume that quantities such as lengths and angle measures are as they appear in a figure. You should assume, however, that lines shown as straight are actually straight, points on a line are in the order shown, and more generally, all geometric objects are in the relative positions shown. For questions with geometric figures, you should base your answers on geometric reasoning, not on estimating or comparing quantities by sight or by measurement.

Coordinate systems, such as xy -planes and number lines, **are** drawn to scale; therefore you can read, estimate, or compare quantities in such figures by sight or by measurement.

Graphical data presentations, such as bar graphs, circle graphs, and line graphs, **are** drawn to scale; therefore, you can read, estimate, or compare data values by sight or by measurement.

Select **Continue** to proceed.

The integer x is positive.

Quantity A

The sum of $0.12x$ and 68% of x

Quantity B

The sum of $\frac{2}{3}x$ and 12% of x

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

A large number of samples of water were tested for the presence of two different minerals, X and Y . Of all the samples tested, 52 percent showed the presence of X , 18 percent showed the presence of Y , and 10 percent showed the presence of both X and Y .

Quantity A

The percent of all the samples tested that showed the presence of neither X nor Y

Quantity B

34%

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The figure in the xy -plane represents two circles, each with radius 2, centered at $(3, 6)$ and $(8, 2)$, respectively.

Quantity A

The distance from a point on one of the circles to a point on the other circle

Quantity B

3

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The area of rectangular region $PRST$ is 5 greater than the area of rectangular region $PQVU$, $RQ = 1$ and $UT = 1$.

Quantity A

The perimeter of rectangular region $PQVU$

Quantity B

8

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$k > m$$

Quantity A

$$|m| - |-k|$$

Quantity B

$$|k| - |-m|$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

Company X sells all of its products to Companies Y , Z , W , and V . Company X sells $\frac{1}{4}$ of its products to Company Y and $\frac{3}{8}$ of its products to Company Z . If Company X sells $\frac{1}{3}$ of the remainder of its products to Company W , what fraction of its products does Company X sell to Company V ?

☐ $\frac{1}{4}$

☐ $\frac{1}{6}$

☐ $\frac{3}{8}$

☐ $\frac{1}{24}$

☐ $\frac{23}{24}$

Select one answer choice.

A data set consists of positive numbers with a mean of m and a standard deviation of $\frac{1}{4}m$. A number x in the data set is 1.5 standard deviations below the mean. What is x in terms of m ?

- ☐ $\frac{5}{8}m$ ☐ $\frac{7}{8}m$ ☐ $\frac{3}{2}m$ ☐ $\frac{8}{5}m$ ☐ $\frac{5}{2}m$

Select one answer choice.

An employee at a parcel delivery company weighs four boxes labeled A , B , C , and D . Box A weighs $\frac{1}{4}$ kilogram and boxes B and C each weigh $\frac{5}{4}$ kilograms. The ratio of the weight of box A to the weight of box B is the same as the ratio of the weight of box C to the weight of box D . What is the weight of box D , in kilograms?

Give your answer as a fraction.

—
 kilograms

Enter your answer as a fraction, with the numerator and denominator in their respective answer boxes. Backspace to erase.

The center of the circle is O , and $RS = ST = 4$. What is the length of arc RWT ?

- ☐ $\frac{4\pi}{3}$ ☐ $\frac{8\pi}{3}$ ☐ $\frac{16\pi}{3}$ ☐ 4π ☐ 8π

Select one answer choice.

If k and n are distinct digits and $k > n$, which of the following numbers is greatest?

- ☐ $1 - 0.\overline{kn}$
- ☐ $1 - 0.\overline{nk}$
- ☐ $1 - 0.\overline{knk}$
- ☐ $1 - 0.\overline{knn}$
- ☐ $1 - 0.\overline{nkn}$

Select one answer choice.

If k and n are distinct digits and $k > n$, which of the following numbers is greatest?

- ☐ $1 - 0.\overline{kn}$
- ☐ $1 - 0.\overline{nk}$
- ☐ $1 - 0.\overline{knk}$
- ☐ $1 - 0.\overline{knn}$
- ☐ $1 - 0.\overline{nk n}$

Select one answer choice.

$$(x + h)(x + j) = x^2 + kx + 12$$

In the equation above, h , j , and k are constants. If h and j are integers, which of the following could be the value of k ?

Indicate all such values.

- ☐ 3
- ☐ 4
- ☐ 6
- ☐ 7
- ☐ 8
- ☐ 13

Select one or more answer choices.

Pat has five matched pairs of socks and no two of the pairs are the same color. If Pat selects two socks simultaneously and at random, what is the probability that the two socks selected will be a matched pair?

☐ $\frac{1}{2}$

☐ $\frac{1}{4}$

☐ $\frac{1}{5}$

☐ $\frac{1}{9}$

☐ $\frac{1}{10}$

Select one answer choice.

Pat has five matched pairs of socks and no two of the pairs are the same color. If Pat selects two socks simultaneously and at random, what is the probability that the two socks selected will be a matched pair?

☐ $\frac{1}{2}$

☐ $\frac{1}{4}$

☐ $\frac{1}{5}$

☐ $\frac{1}{9}$

☐ $\frac{1}{10}$

Select one answer choice.

In a certain town, the median daily noon temperature for a 7-day period was less than 60°F . In the town, which of the following could be the total number of days during the 7-day period on which the daily noon temperature was less than 60°F ?

Indicate all such numbers.

☐ 1

☐ 2

☐ 3

☐ 4

☐ 5

☐ 6

☐ 7

Select one or more answer choices.

For all positive numbers c and d , which of the following is equivalent to $(1 + c^{-1} + d^{-2})^{-1}$?

- ☐ $1 + c + d^2$ ☐ $\frac{1}{cd^2}$ ☐ $\frac{cd^2 + d^2 + c}{cd^2}$ ☐ $\frac{1}{1 + c + d^2}$ ☐ $\frac{cd^2}{cd^2 + d^2 + c}$

Select one answer choice.

Salesperson B' 's compensation for any week is \$400 plus x percent of the portion of B' 's total sales for the week that is above \$1,000. If B' 's total sales last week were \$2,000, then, in terms of x , what was B' 's compensation, in dollars?

- ☐ $400x$
- ☐ $400 + x$
- ☐ $400 + 10x$
- ☐ $400 + 100x$
- ☐ $400 + 1,000x$

Select one answer choice.
