General Test Information

Timing Information

Total testing time on this test is 1 hour and 58 minutes.

If you wish to leave your seat during the test, please raise your hand or otherwise indicate that you need the administrator - timing will not stop.

Test Information

If you have a concern about the wording of a test question, please note the question number and continue the test. Report your concern to the administrator after you complete the test.

No credit will be given for any responses marked on scratch paper. Use the scratch paper to work out your answers. All scratch paper must be turned in to the administrator (or erased in front of the administrator in an at-home test) at the end of the testing session.

Within a timed section you may skip any question and return to it later before you exit the section. You should answer as many questions as possible during the test and manage your time with this in mind. Use the **Review** button at any time during the test to review which questions you have answered and which questions you have skipped.

Select **Continue** to proceed.

Governments should focus on solving the immediate problems of today rather than on trying to solve the anticipated problems of the future.

Write a response in which you discuss the extent to which you agree or disagree with the recommendation and explain your reasoning for the position you take. In developing and supporting your position, describe specific circumstances in which adopting the recommendation would or would not be advantageous and explain how these examples shape your position.

Quantitative Reasoning

12 Questions

21 minutes (standard time)

For each question, indicate the best answer, using the directions given. If you need more detailed directions, select **Help** at any time.

An on-screen calculator is available for each question in this section. To use the calculator, select the calculator button.

If a question has answer choices with **ovals** **O**, then the correct answer consists of a single choice. If a question has answer choices with **square boxes** **D**, then the correct answer consists of one or more answer choices. Read the directions for each question carefully. The directions will indicate if you should select one or more answer choices. To answer questions based on a data presentation, you may need to scroll or use your keyboard to access the entire presentation.

All numbers used are real numbers.

All figures are assumed to lie in a plane unless otherwise indicated.

Geometric figures, such as lines, circles, triangles, and quadrilaterals, **are not necessarily** drawn to scale. That is, you should **not** assume that quantities such as lengths and angle measures are as they appear in a figure. You should assume, however, that lines shown as straight are actually straight, points on a line are in the order shown, and more generally, all geometric objects are in the relative positions shown. For questions with geometric figures, you should base your answers on geometric reasoning, not on estimating or comparing quantities by sight or by measurement.

Coordinate systems, such as xy-planes and number lines, **are** drawn to scale; therefore you can read, estimate, or compare quantities in such figures by sight or by measurement.

Graphical data presentations, such as bar graphs, circle graphs, and line graphs, **are** drawn to scale; therefore, you can read, estimate, or compare data values by sight or by measurement.

Select **Continue** to proceed.

Of the 45 candidates for a certain job, 20 are married. Of the candidates who are married, 8 do not have a PhD. Of the candidates who are not married, 15 have a PhD.

Quantity A

The number of candidates who do not have a PhD

Quantity B

18

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

A rancher uses 240 meters of fencing to build two adjacent rectangular corrals on a flat piece of land along the side of a barn, as shown in the figure. The width of each corral is x meters, the two corrals share one common side, and no fencing is required along the side of the barn. Disregarding the thickness of the fence, what is the total area, in square meters, of the two corrals in terms of x ?

- ☐ $240 - 3x$
- ☐ $240x - 3x^2$
- ☐ $240x - x^2$
- ☐ $720x - 9x^2$
- ☐ $720x$

Questions 6 to 8 are based on the following data.

Temporary Employment in Germany, 1993–1999**Percent of Temporary Employees by Length of Employment Contract, 1999**

In 1998 the ratio of the number of female temporary employees to the number of male temporary employees was 1 to x , where $x > 0$. In terms of x , what was the number, in thousands, of female temporary employees in 1998?

☐ $253(x - 1)$

☐ $253(x + 1)$

☐ $\frac{253}{x}$

☐ $\frac{253}{x - 1}$

☐ $\frac{253}{x + 1}$

Select one answer choice.

Questions 6 to 8 are based on the following data.

Temporary Employment in Germany, 1993–1999**Percent of Temporary Employees by Length of Employment Contract, 1999**

Which of the following is closest to the percent increase in the number of temporary employees from 1993 to 1999?

- ☐ 36% ☐ 58% ☐ 136% ☐ 158% ☐ 236%

Select one answer choice.

Questions 6 to 8 are based on the following data.

Temporary Employment in Germany, 1993-1999

Percent of Temporary Employees by Length of Employment Contract, 1999

If 5 percent of the temporary employees in 1999 were students whose employment contracts had lengths of less than 1 week, then the number of these students was approximately what percent of the total number of temporary employees in 1999 whose contracts had lengths of less than 1 week?

☐ 2%

☐ 10%

☐ 20%

☐ 30%

☐ 40%

Select one answer choice.

If x and y are positive integers such that $xy = 20$, then $x + y$ could have any one of how many values?

- ☐ Two
- ☐ Three
- ☐ Four
- ☐ Five
- ☐ Six

Select one answer choice.

A certain triangle has an area of 7.5. If the length of a base and the corresponding height of the triangle are integers, which of the following values could be the length of the base?

Indicate all such values.

- ☐ 1
- ☐ 2
- ☐ 3
- ☐ 4
- ☐ 5
- ☐ 6
- ☐ 10
- ☐ 15

Select one or more answer choices.

A company announced that next year's annual salary of each of its employees will be 5 percent greater than this year's salary, plus \$500 times the number of years of service that the employee has this year. If next year's annual salary of an employee who has 4 years of service this year will be \$38,330, what is the employee's annual salary this year?

\$

If $xy \neq 0$ and $x - 2y = 3x$, which of the following **CANNOT** be equal to x^2y ?

- ☐ xy^2 ☐ $-xy^2$ ☐ $-x^3$ ☐ y^3 ☐ 1

Select one answer choice.

Questions 4 and 5 are based on this passage.

Academics have been reconsidering the meaning of “wilderness” and its usefulness to conservation strategies. The idea of pristine wilderness is historically inaccurate, argue scholars of Native American history, who have demonstrated that Native Americans shaped their environments with their agricultural practices and residential patterns. Other scholars argue that wilderness is simply a cultural construct created in opposition to modern society, not a real place untouched by humans. Scientists, in turn, have argued that the goal of wilderness preservation is based on a model in which ecosystems progress toward a stable equilibrium state, a model replaced in the 1970s with one stressing constant change. These insights complicate wilderness management, which critics charge aims to preserve a supposedly stable environment that existed prior to human disturbance.

Based on the passage, the “scholars of Native American history” and the “other scholars” would probably agree that

- ☐ it is a mistake to think that Native Americans inhabited a pristine wilderness
- ☐ Native American agricultural practices have helped shape the modern understanding of wilderness
- ☐ modern society is not as much of a threat to pristine wilderness as is commonly thought
- ☐ there is very little pristine wilderness left to preserve
- ☐ the idea of wilderness remains useful to conservation strategies

Questions 4 and 5 are based on this passage.

Academics have been reconsidering the meaning of “wilderness” and its usefulness to conservation strategies. The idea of pristine wilderness is historically inaccurate, argue scholars of Native American history, who have demonstrated that Native Americans shaped their environments with their agricultural practices and residential patterns. Other scholars argue that wilderness is simply a cultural construct created in opposition to modern society, not a real place untouched by humans. Scientists, in turn, have argued that the goal of wilderness preservation is based on a model in which ecosystems progress toward a stable equilibrium state, a model replaced in the 1970s with one stressing constant change. These insights complicate wilderness management, which critics charge aims to preserve a supposedly stable environment that existed prior to human disturbance.

The passage implies which of the following about the “model” ?

- ☐ It has had some influence on scholars of Native American history.
- ☐ It fits poorly with data initially gathered in the 1970s.
- ☐ It has been influential in the reconsideration of the meaning of wilderness.
- ☐ It underlies a conservation strategy that has recently been questioned.
- ☐ It is based on the idea that wilderness is simply a cultural construct.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Pre-Columbian peoples had a significant impact on Amazonian forest diversity; at least 8,000 years ago, they must have begun domesticating plants recently found to be _____ around sites once occupied by humans.

- ☐ hybridized
- ☐ abundant
- ☐ uncommon
- ☐ preserved
- ☐ harvested
- ☐ dominant

Between 1975 and 2005 water use in the United States declined just as the population rose, showing the old assumption that total water consumption is positively correlated with population growth to be _____.

- ☐ ubiquitous
- ☐ specious
- ☐ fallacious
- ☐ controversial
- ☐ unequivocal
- ☐ commonplace

Select two answer choices.

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again.

Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. Raw data are not an intellectual commons, as are collections. The experimental sciences operate more in a market economy than a moral one.

The passage is primarily concerned with

- ☐ resolving a dispute
- ☐ defending a practice
- ☐ summarizing a dilemma
- ☐ delineating a difference
- ☐ explaining an anomaly

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again.

Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. Raw data are not an intellectual commons, as are collections. The experimental sciences operate more in a market economy than a moral one.

The author of the passage would most likely agree with which of the following statements about manufactured data?

- ☐ They are essential to the common good.
- ☐ They cannot be easily replicated.
- ☐ They can play a key role in career advancement.
- ☐ They cannot be adequately interpreted until they have been published.
- ☐ They are often manipulated to support specific hypotheses.

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again.

Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. Raw data are not an intellectual commons, as are collections. The experimental sciences operate more in a market economy than a moral one.

In the context of the passage as a whole, the highlighted sentence serves to

- ☐ warn of the consequences of overlooking a point made in the first sentence of the passage
- ☐ cite an exception to a principle described in the preceding sentence
- ☐ present a conditional scenario that is confirmed in the subsequent sentence
- ☐ provide a rationale for an assertion made in the final sentence of the passage
- ☐ predict an outcome that is refuted in the final sentence of the passage

Questions 5 and 6 are based on this passage.

Merchant guilds—associations of long-distance traders—emerged in Europe in the tenth century to help these traders enforce contracts and protect against crime, warfare, and arbitrary confiscation. Such guilds might be thought to have lost their purpose in the fifteenth and sixteenth centuries when European rulers became committed to the creation of law courts and the protection of trade through diplomacy or outright warfare. However, this strengthening of central political, economic, and legal control was accompanied by military competition between states, which led to increased violence against long-distance traders. This competition harmed not only the merchants whose sovereigns were fighting but also neutral traders. As a result, merchants in many parts of Europe continued to act collectively to ensure safe conduct.

In the context where it occurs, the mention of “outright warfare” primarily serves to

- ☐ indicate why the protection of trade was often quite difficult
- ☐ introduce a possible outcome of the failure of diplomacy
- ☐ account for why European traders continued to act collectively
- ☐ explain why European traders needed the protection provided by rulers
- ☐ identify a mechanism used by European rulers to protect trade

Questions 5 and 6 are based on this passage.

Merchant guilds—associations of long-distance traders—emerged in Europe in the tenth century to help these traders enforce contracts and protect against crime, warfare, and arbitrary confiscation. Such guilds might be thought to have lost their purpose in the fifteenth and sixteenth centuries when European rulers became committed to the creation of law courts and the protection of trade through diplomacy or outright warfare. However, this strengthening of central political, economic, and legal control was accompanied by military competition between states, which led to increased violence against long-distance traders. This competition harmed not only the merchants whose sovereigns were fighting but also neutral traders. As a result, merchants in many parts of Europe continued to act collectively to ensure safe conduct.

Which of the following can be inferred from the passage regarding European merchants who engaged in long-distance trading in the fifteenth and sixteenth centuries?

- ☐ They found that merchant guilds continued to serve a useful purpose.
- ☐ They sometimes engaged in diplomacy on behalf of their rulers.
- ☐ They did not welcome the creation of law courts in Europe.
- ☐ They were seldom neutral parties in the warfare among European states.
- ☐ They were skeptical of the use of diplomacy to protect trade.

Questions 7 to 9 are based on this passage.

The late zoologist Sidnie Manton acknowledged that arthropods—animals with jointed exoskeletons, such as flies, crabs, and spiders—are all descended from soft-bodied segmented worms. Yet he maintained that differences in limb form, musculature, and embryonic development indicate that these three arthropod groups—insects, crustaceans, and chelicerates, respectively—evolved independently from worms rather than from a common arthropod ancestor. Consequently, according to Manton, shared characteristics such as a jointed exoskeleton and large compound eyes represent cases of convergent evolution—similar yet independent developments—in these organisms. But if they evolved convergently, then one would expect significant differences in the neurological systems supporting sight. In fact, however, many nerve cells play virtually identical roles in supporting complex visual responses in both insects and crustaceans, suggesting that their common ancestor already possessed highly developed eyes, and therefore was probably already an arthropod. Yet the compound eyes of chelicerates differ neurologically from those of insects and crustaceans, suggesting that the eyes of chelicerates did evolve independently and providing partial confirmation of Manton's views.

The primary purpose of the passage is to

- ☐ explain how insects and crustaceans differ from chelicerates
- ☐ evaluate an account of the evolution of various types of arthropods
- ☐ illustrate a case of convergent evolution among different types of arthropods
- ☐ discuss various physiological features of insects, crustaceans, and chelicerates
- ☐ identify underlying similarities in two contrasting theories regarding the evolution of certain arthropods

Questions 7 to 9 are based on this passage.

The late zoologist Sidnie Manton acknowledged that arthropods—animals with jointed exoskeletons, such as flies, crabs, and spiders—are all descended from soft-bodied segmented worms. Yet he maintained that differences in limb form, musculature, and embryonic development indicate that these three arthropod groups—insects, crustaceans, and chelicerates, respectively—evolved independently from worms rather than from a common arthropod ancestor. Consequently, according to Manton, shared characteristics such as a jointed exoskeleton and large compound eyes represent cases of convergent evolution—similar yet independent developments—in these organisms. But if they evolved convergently, then one would expect significant differences in the neurological systems supporting sight. In fact, however, many nerve cells play virtually identical roles in supporting complex visual responses in both insects and crustaceans, suggesting that their common ancestor already possessed highly developed eyes, and therefore was probably already an arthropod. Yet the compound eyes of chelicerates differ neurologically from those of insects and crustaceans, suggesting that the eyes of chelicerates did evolve independently and providing partial confirmation of Manton's views.

It can be inferred that the author of the passage and Manton would be most likely to disagree over which of the following claims?

- ☐ Insects and crustaceans are both descended from segmented worms.
- ☐ Insects and crustaceans each have unique limb form, musculature, and embryonic development.
- ☐ The compound eyes of insects and crustaceans are a case of convergent evolution.
- ☐ None of the characteristics common to insects and crustaceans can be found in segmented worms.
- ☐ Insects and crustaceans are the most closely related of all the arthropod groups.

Questions 7 to 9 are based on this passage.

The late zoologist Sidnie Manton acknowledged that arthropods—animals with jointed exoskeletons, such as flies, crabs, and spiders—are all descended from soft-bodied segmented worms. Yet he maintained that differences in limb form, musculature, and embryonic development indicate that these three arthropod groups—insects, crustaceans, and chelicerates, respectively—evolved independently from worms rather than from a common arthropod ancestor. Consequently, according to Manton, **shared characteristics** such as a jointed exoskeleton and large compound eyes represent cases of convergent evolution—similar yet independent developments—in these organisms. But if they evolved convergently, then one would expect significant differences in the neurological systems supporting sight. In fact, however, many nerve cells play virtually identical roles in supporting complex visual responses in both insects and crustaceans, suggesting that their common ancestor already possessed highly developed eyes, and therefore was probably already an arthropod. Yet the compound eyes of chelicerates differ neurologically from those of insects and crustaceans, suggesting that the eyes of chelicerates did evolve independently and providing partial confirmation of Manton's views.

It can be inferred from the passage that Manton believed which of the following about the “shared characteristics” mentioned in the passage?

- ☐ The shared characteristics are not all present in any single ancestor of these three arthropod groups.
- ☐ The shared characteristics could be used to determine which of these three arthropod groups gave rise to the other two arthropod groups.
- ☐ The shared characteristics are a good indication that all three groups of arthropods descended from segmented worms.
- ☐ The shared characteristics are the most compelling evidence to date for the theory of convergent evolution.
- ☐ The shared characteristics do not justify classifying all three animal groups as arthropods.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The vivid, intelligent introduction to fundamental elements of classical music offered by conductor Michael Tilson Thomas in these programs has few precedents: Thomas is truly performing radical acts of _____.

- ☐ elucidation
- ☐ appropriation
- ☐ chicanery
- ☐ inspiration
- ☐ demystification
- ☐ subterfuge

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The fierce drought that is gripping the area—and imminent rationing and steep water price increases—is _____ the area's deep economic divide, as wealthy communities guzzle water while poorer communities nearby conserve by necessity.

- ☐ defining
- ☐ bridging
- ☐ highlighting
- ☐ exacerbating
- ☐ underscoring
- ☐ adjusting

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The team of physicists regarded the data as too _____ not to study with fresh eyes and first questions.

- ☐ anomalous
- ☐ singular
- ☐ implausible
- ☐ incidental
- ☐ confounding
- ☐ ancillary

Question 13 is based on this passage.

When people suffering from zencolia, a highly infectious disease, are given the drug nartol, their symptoms cease and the zencolia virus can no longer be detected. But when some zencolia patients discontinue treatment with nartol, they exhibit zencolia symptoms once more just months later, and the virus is again detectable. This result shows that treatment with nartol sometimes suppresses the zencolia virus below detectable levels without entirely eliminating the virus from the body.

Which of the following, if true, most strengthens the argument?

- ☐ When the zencolia virus enters the body of a person free of the virus, it takes several years from the time of infection before any zencolia symptoms appear.
- ☐ There is no drug that is more effective than nartol in treating the symptoms of zencolia.
- ☐ Taking nartol prevents a patient from becoming infected by the zencolia virus for as long as the drug is used.
- ☐ Researchers have so far not been able to develop a vaccine that would reliably prevent infection or reinfection with the zencolia virus.
- ☐ Some people are allergic to nartol but, thanks to the availability of a simple and effective allergy test, run little risk of having it prescribed for them if they contract zencolia.

Questions 14 and 15 are based on this passage.

In the early nineteenth-century United States, miniature portraits of family members, painted on ivory and typically bestowed on other family members as gifts, became extremely popular, reflecting the growing importance of affection as a family value. The period's expanding market for miniatures was fueled by the labor of female artists, who charged a fraction of the commissions demanded by their male competitors. Especially in urban areas, middle-class families took advantage of the competitive, gendered labor market to amass multiple representations of kin. Miniatures depicting children, parents, siblings, and other kin heightened the genre's broadly domestic associations. So, too, did the growing number of women who commissioned paintings. While full-sized oil paintings were quite expensive, miniatures were generally attainable for middle-class women, making them affordable luxuries.

The passage suggests which of the following about miniature portraits in the nineteenth century?

- ☐ They were painted almost exclusively by female artists.
- ☐ They more often represented female than male family members.
- ☐ Their prices rose because the overall market for paintings by women expanded.
- ☐ Their rising popularity reflected an increasing emphasis on the family.
- ☐ The ivory on which they were painted made the portraits quite valuable.

Questions 14 and 15 are based on this passage.

In the early nineteenth-century United States, miniature portraits of family members, painted on ivory and typically bestowed on other family members as gifts, became extremely popular, reflecting the growing importance of affection as a family value. The period's expanding market for miniatures was fueled by the labor of female artists, who charged a fraction of the commissions demanded by their male competitors. Especially in urban areas, middle-class families took advantage of the competitive, gendered labor market to amass multiple representations of kin. Miniatures depicting children, parents, siblings, and other kin heightened the genre's broadly domestic associations. So, too, did the growing number of women who commissioned paintings. While full-sized oil paintings were quite expensive, miniatures were generally attainable for middle-class women, making them affordable luxuries.

The author discusses "full-sized oil paintings" primarily to

- ☐ qualify a claim about the preferences of middle-class art buyers
- ☐ account for a choice made by certain individuals who commissioned paintings
- ☐ explain how the subject matter of a painting could affect its price
- ☐ note a change in the market for paintings created by female artists
- ☐ rule out one explanation for the popularity of family portraits

End of Section

You have reached the end of this section. You have time remaining to review. As long as there is time remaining, you can check your work. Once you leave this section, you WILL NOT be able to return to it.

Select **Review** to go back to the Review screen.

Select **Return** to go to the last question in this section.

Select **Continue** to proceed to the next section of the test.

Report or Cancel Your Scores

You now have the option to either report or cancel your GRE General Test scores from this testing session.

If you choose to report your scores from this testing session, they will become a part of your cumulative record.

If you choose to cancel your scores from this testing session, **scores will not be reported for any section of this test.**

Select **Report Scores** or **Cancel Scores** now.

Select Your Score Recipients

If you know where you want to send your test scores, you can select up to four (4) institutions now as part of your test fee. You can choose to send scores from your most recent test administration or from all your test administrations. Select the institutions by clicking "Add a Score Recipient" below.

If you prefer, you can select score recipients at a later date for a fee through your ETS Account. At that time, you can choose to send scores from your most recent test administration, from all your test administrations, or from any specific test administration(s).
