

Navigating Through the Test

During this test, you can use the mouse OR the keyboard to move through the screens.

You can use the following standard keys on the keyboard:

Tab 

Press the Tab key to move from one selectable element on the page to the next. The current selectable element will be indicated by a thin blue border.

Examples of selectable elements:

- Buttons on the menu toolbar
- Answer options for test questions

Shift  and Tab 

Press the Shift and Tab keys to reverse direction through the selectable elements.

Spacebar 

Press the spacebar key to select an element. Press the spacebar key again to deselect the element.

Up  and Down 

Use the up and down arrows to scroll vertically.

Select **Continue** to proceed.

- Using any aids in connection with the test, including, without limitation: mechanical pencils, mechanical erasers, pens, pagers, beepers, all watches, including digital, analog and smartwatches, books, pamphlets, notes, unauthorized scratch paper, rulers, highlighter pens, scan pens or scanning devices, dictionaries, translators, compasses, protractors and any handheld electronic scanning, listening, recording or photographic devices
- Creating a disturbance or disruptive behavior in any form will not be tolerated. The test administrator has sole discretion in determining what constitutes disruptive behavior.
- Attempting to give or receive assistance or communication in any form is not permitted during the test administration. Discussion or sharing of test content or answers during the test administration, including breaks, and after the test administration, is prohibited.
- Removing or attempting to remove test content from the test center. Under no circumstances may test content or any part of the test content be removed, reproduced and/or disclosed by any means (e.g., hard copy, verbally, electronically) to any person or entity.
- Tampering with a computer during a computer-delivered test administration
- Attempting to remove scratch paper (either partially or in its entirety) from the computer-delivered testing room or using scratch paper before the test, during untimed sections of the test or during breaks
- Bringing food, beverages or tobacco into the testing room
- Bringing a weapon or firearm into the test center
- Leaving the test center vicinity during the test session or during breaks
- Leaving the testing room without permission. You are not permitted to go outside the test center building unless it is to use the restroom during the test administration, including breaks.
- Taking excessive or extended unscheduled breaks during the test session. Test center administrators are required to strictly monitor unscheduled breaks and report test takers who take excessive or extended breaks.
- Failing to follow any of the test administration regulations contained in the *GRE Information Bulletin*, on the GRE website, given by the test administrator or specified in any test materials

Analytical Writing

This section consists of a timed Analyze an Issue writing task. Standard timing for this section is 30 minutes. The timer displays the time remaining for the task.

Important Notice

Your essay response on the Analytical Writing section will be reviewed by ETS essay-similarity-detection software and by experienced essay readers during the scoring process. In light of the high value placed on independent intellectual activity within graduate schools and universities, your essay response should represent your original work. ETS reserves the right to cancel test scores of any test taker when an essay response includes, but is not limited to, any of the following:

- text that is unusually similar to that found in one or more other test essay responses;
- quoting or paraphrasing, without attribution, language that appears in published or unpublished sources; including sources from the Internet and/or sources provided by any third party;
- unacknowledged use of work that has been produced through collaboration with others without citation of the contribution of others;
- essays submitted as work of the test taker that appear to have been borrowed in whole or in part from elsewhere or prepared by another person.

When one or more of the preceding circumstances occurs, ETS may conclude, in its professional judgment, that the essay response does not reflect the independent writing skills that this test seeks to measure. When ETS reaches that conclusion, it cancels the Analytical Writing score, and because Analytical Writing scores are an integral part of the GRE General Test scores, those scores are canceled as well.

Select **Continue** to proceed.

Universities should require every student to take a variety of courses outside the student's field of study.

Write a response in which you discuss your views on the policy and explain your reasoning for the position you take. In developing and supporting your position, you should consider the possible consequences of implementing the policy and explain how these consequences shape your position.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Knowing how (i)_____ she was at work, her colleagues were surprised at her (ii)_____ throughout dinner.

Blank (i)

dependable
diffident
diligent

Blank (ii)

timidity
assertiveness
punctiliousness

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Many writers are (i)_____ the term “unauthorized biography” because it sounds so (ii)_____. Admittedly, biography by its very nature is (iii)_____ a life—an intimate and possibly unflattering examination by the biographer, who burrows deeper and deeper to reveal the unseen and illuminate the unexpected—but unauthorized biographies can be a public service and a boon to future historians.

Blank (i)

uncomfortable with
indebted to
conciliated by

Blank (ii)

platitudinous
nefarious
lachrymose

Blank (iii)

a postscript to
a vindication of
an invasion of

Select one entry from each column.

Questions 4 and 5 are based on this passage.

There are two schools of thought about the relationship between self-esteem and the ability to tolerate inner conflict about one's own acts or beliefs. Spencer, Josephs, and Steele's affirmational resources view posits that people with high self-esteem have self-concepts that are more positive, making it easier for them to tolerate actions they have taken that are dissonant with their beliefs or attitudes. On the other hand, Thibodeau and Aronson's self-consistency view holds that people with high self-esteem will view a dissonant act as more discrepant with their positive self-image. According to this latter view, people with high self-esteem are likely to feel more dissonance than those with low self-esteem and are more prone to employ strategies to reduce cognitive dissonance, such as rationalization and self-justification.

The passage suggests which of the following about Thibodeau and Aronson?

- ☐ They hold that high self-esteem correlates with a relatively higher sensitivity to dissonance.
- ☐ They believe that dissonant acts are more characteristic of people with low self-esteem than of people with high self-esteem.
- ☐ They regard rationalization and self-justification as ineffective strategies for reducing dissonance.
- ☐ They reject Spencer, Josephs, and Steele's definition of a positive self-concept.
- ☐ They share the view of Spencer, Josephs, and Steele about the sources of a person's self-esteem.

Select one answer choice.

Questions 4 and 5 are based on this passage.

There are two schools of thought about the relationship between self-esteem and the ability to tolerate inner conflict about one's own acts or beliefs. Spencer, Josephs, and Steele's affirmational resources view posits that people with high self-esteem have self-concepts that are more positive, making it easier for them to tolerate actions they have taken that are dissonant with their beliefs or attitudes. On the other hand, Thibodeau and Aronson's self-consistency view holds that people with high self-esteem will view a dissonant act as more discrepant with their positive self-image. According to this latter view, people with high self-esteem are likely to feel more dissonance than those with low self-esteem and are more prone to employ strategies to reduce cognitive dissonance, such as rationalization and self-justification.

Which of the following is true about dissonant actions according to the affirmational resources view?

- ☐ An individual would be unlikely to engage in such actions if he or she did not have a sufficiently positive self-concept to make them tolerable.
- ☐ An individual might not experience such actions as dissonant with his or her beliefs if that individual were not surrounded by others who shared those beliefs.
- ☐ Such actions would be experienced as more disturbing by people who have relatively low self-esteem than by people who have relatively high self-esteem.
- ☐ Such actions tend to have a negative effect on an individual's self-concept, so they are likely to result in a decline in self-esteem.
- ☐ Such actions are rare because of the psychological difficulty of tolerating them.

Questions 10 to 12 are based on this passage.

Researchers suspect that meteorites (particles of matter that fall to Earth's surface from space) are pieces of asteroids, the many minor planets primarily inhabiting the region between Mars and Jupiter called the asteroid belt. The most common meteorites are ordinary chondrites—rocks containing tiny flecks of metal. By analyzing the spectrums of sunlight reflected by asteroids to determine the asteroids' chemical composition, researchers have found that most of the brighter asteroids contain the same silicates and other compounds that dominate chondrites. These siliceous, or S-type, asteroids are the most abundant type in the inner asteroid belt, the part of the asteroid belt from which objects are most likely to escape and travel to Earth. However, S-type asteroids reflect red and infrared light much better than they reflect green, blue, and violet light, suggesting that they have a higher metal content than do ordinary chondrites. This has led at least one researcher to posit that meteorites come from other types of asteroids that are too small and too dim to be detected. However, S-type asteroids could be ordinary chondrites that have been weathered by the effects of the space environment, making them seem redder and more metallic than they really are.

The primary purpose of the passage is to

- ☐ discuss the defining characteristics of chondrites
- ☐ compare the spectrums of light reflected by chondrites and S-type asteroids
- ☐ chronicle changes in the accepted interpretation of data concerning the chemical composition of asteroids
- ☐ weigh evidence for and against a particular hypothesis on the origin of meteorites
- ☐ question a current theory on the chemical composition of the most common type of meteorite

Select one answer choice.

Questions 10 to 12 are based on this passage.

Researchers suspect that meteorites (particles of matter that fall to Earth's surface from space) are pieces of asteroids, the many minor planets primarily inhabiting the region between Mars and Jupiter called the asteroid belt. The most common meteorites are ordinary chondrites—rocks containing tiny flecks of metal. By analyzing the spectrums of sunlight reflected by asteroids to determine the asteroids' chemical composition, researchers have found that most of the brighter asteroids contain the same silicates and other compounds that dominate chondrites. These siliceous, or S-type, asteroids are the most abundant type in the inner asteroid belt, the part of the asteroid belt from which objects are most likely to escape and travel to Earth. However, S-type asteroids reflect red and infrared light much better than they reflect green, blue, and violet light, suggesting that they have a higher metal content than do ordinary chondrites. This has led at least one researcher to posit that meteorites come from other types of asteroids that are too small and too dim to be detected. However, S-type asteroids could be ordinary chondrites that have been weathered by the effects of the space environment, making them seem redder and more metallic than they really are.

The author of the passage most likely mentions that the inner asteroid belt is “the part of the asteroid belt from which objects are most likely to escape and travel to Earth” in order to

- ☐ distinguish between two important sources of meteorites that travel to Earth
- ☐ suggest that S-type asteroids are likely to be a source of meteorites
- ☐ call into question an assumption about the compounds that dominate chondrites
- ☐ explain why S-type asteroids do not reflect green, blue, and violet light as well as they reflect red and infrared light
- ☐ provide evidence to support an assertion about the abundance of S-type asteroids

Select one answer choice.

Questions 10 to 12 are based on this passage.

Researchers suspect that meteorites (particles of matter that fall to Earth's surface from space) are pieces of asteroids, the many minor planets primarily inhabiting the region between Mars and Jupiter called the asteroid belt. The most common meteorites are ordinary chondrites—rocks containing tiny flecks of metal. By analyzing the spectrums of sunlight reflected by asteroids to determine the asteroids' chemical composition, researchers have found that most of the brighter asteroids contain the same silicates and other compounds that dominate chondrites. These siliceous, or S-type, asteroids are the most abundant type in the inner asteroid belt, the part of the asteroid belt from which objects are most likely to escape and travel to Earth. However, S-type asteroids reflect red and infrared light much better than they reflect green, blue, and violet light, suggesting that they have a higher metal content than do ordinary chondrites. This has led at least one researcher to posit that meteorites come from other types of asteroids that are too small and too dim to be detected. However, S-type asteroids could be ordinary chondrites that have been weathered by the effects of the space environment, making them seem redder and more metallic than they really are.

It can be inferred from the passage that one reason for considering S-type asteroids to be likely sources of meteorites is that S-type asteroids

- ☐ are brighter than other types of asteroids
- ☐ are the most common type of asteroid throughout the asteroid belt
- ☐ reflect red and infrared light better than they reflect green, blue, and violet light
- ☐ contain the same silicates and other compounds that dominate chondrites
- ☐ are the only type of asteroid found in the inner asteroid belt

Quantitative Reasoning

12 Questions

21 minutes (standard time)

For each question, indicate the best answer, using the directions given. If you need more detailed directions, select **Help** at any time.

An on-screen calculator is available for each question in this section. To use the calculator, select the calculator button.

If a question has answer choices with **ovals** ☐, then the correct answer consists of a single choice. If a question has answer choices with **square boxes** ☐, then the correct answer consists of one or more answer choices. Read the directions for each question carefully. The directions will indicate if you should select one or more answer choices. To answer questions based on a data presentation, you may need to scroll or use your keyboard to access the entire presentation.

All numbers used are real numbers.

All figures are assumed to lie in a plane unless otherwise indicated.

Geometric figures, such as lines, circles, triangles, and quadrilaterals, **are not necessarily** drawn to scale. That is, you should **not** assume that quantities such as lengths and angle measures are as they appear in a figure. You should assume, however, that lines shown as straight are actually straight, points on a line are in the order shown, and more generally, all geometric objects are in the relative positions shown. For questions with geometric figures, you should base your answers on geometric reasoning, not on estimating or comparing quantities by sight or by measurement.

Coordinate systems, such as xy -planes and number lines, **are** drawn to scale; therefore you can read, estimate, or compare quantities in such figures by sight or by measurement.

Graphical data presentations, such as bar graphs, circle graphs, and line graphs, **are** drawn to scale; therefore, you can read, estimate, or compare data values by sight or by measurement.

Select **Continue** to proceed.

$$x > 0$$

Quantity A

Questions 5 and 6 are based on this passage.

Because densely populated urban centers concentrate human activity, we think of them as pollution crisis zones. Ecology-minded discussions often focus on ways to make cities seem somewhat less oppressively man-made, such as increasing the area devoted to parks or easing the intensity of development. But most such changes would actually undermine cities' extraordinary energy efficiency. Per unit of area, cities in the United States generate more greenhouse gases, use more energy, and produce more solid waste than most other American regions of comparable size. On a map depicting negative environmental impacts in relation to surface area, therefore, cities would look like intense hot spots. If you plotted the same negative impacts by resident or household, however, the reverse would hold.

Which of the following best expresses the main idea of the passage?

- ☐ Increasing the space devoted to parks in urban areas would not necessarily make cities seem less man-made.
- ☐ Because they are densely populated, cities tend to have a disproportionately negative impact on the environment.
- ☐ Although densely populated cities are relatively energy efficient, they are still the largest contributors to environmental pollution.
- ☐ Decreasing the density of urban populations might in some respects worsen their environmental impact.
- ☐ The extraordinary energy efficiency of cities suggests that concerns about the environment in urban areas may be unwarranted.

Select one answer choice.

Questions 5 and 6 are based on this passage.

Because densely populated urban centers concentrate human activity, we think of them as pollution crisis zones. Ecology-minded discussions often focus on ways to make cities seem somewhat less oppressively man-made, such as increasing the area devoted to parks or easing the intensity of development. But most such changes would actually undermine cities' extraordinary energy efficiency. Per unit of area, cities in the United States generate more greenhouse gases, use more energy, and produce more solid waste than most other American regions of comparable size. On a map depicting negative environmental impacts in relation to surface area, therefore, cities would look like intense hot spots. If you plotted the same negative impacts by resident or household, however, the reverse would hold.

Consider each of the choices separately and select all that apply.

The passage implies that in the United States relatively sparsely populated areas exceed cities in per capita rate of

- ☐ solid-waste production
- ☐ intensity of development
- ☐ greenhouse-gas emissions

Select one or more answer choices.

Questions 7 to 9 are based on this passage.

Recently, Pyare and Longland conducted a three-year study of the mechanisms employed by northern flying squirrels to detect truffles—subterranean, edible fungi that serve as a primary food source for the squirrels. In a foraging area, squirrels successfully retrieved buried truffles that lacked aboveground, visual clues in 19 of 30 trials and did not search near sites that lacked truffles altogether, confirming the importance of olfaction (sense of smell) as the primary factor in the squirrels' foraging behavior. The study also sought to evaluate the effect of the presence of decaying logs and woody debris, since such material is often associated with fungi such as truffles. Sites with a single log, but no truffle, failed to elicit a search attempt in nearly all trials. However, the initial detection rate at truffle-and-log sites was significantly greater than at truffle-only sites. Thus, although olfaction remains primary, squirrels may also benefit by foraging near woody debris as an aboveground clue to truffle locations. Pyare and Longland also note that during the course of their study, truffles often appeared to fruit in the same locations each year; hence, squirrels may improve their foraging efficiency by returning to fruiting sites on a year-to-year basis.

The primary purpose of the passage is to discuss

- ☐ the utility of a study regarding truffle-foraging behavior in northern flying squirrels
- ☐ contradictory results from a study of the truffle-detection mechanisms used by northern flying squirrels
- ☐ certain findings from a study examining the truffle-foraging behavior of northern flying squirrels
- ☐ a study examining the distribution and fruiting patterns of truffles in areas frequented by northern flying squirrels
- ☐ a study examining the various olfactory strategies employed by northern flying squirrels when foraging for truffles

Select one answer choice.

Questions 7 to 9 are based on this passage.

Recently, Pyare and Longland conducted a three-year study of the mechanisms employed by northern flying squirrels to detect truffles—subterranean, edible fungi that serve as a primary food source for the squirrels. In a foraging area, squirrels successfully retrieved buried truffles that lacked aboveground, visual clues in 19 of 30 trials and did not search near sites that lacked truffles altogether, confirming the importance of olfaction (sense of smell) as the primary factor in the squirrels' foraging behavior. The study also sought to evaluate the effect of the presence of decaying logs and woody debris, since such material is often associated with fungi such as truffles. Sites with a single log, but no truffle, failed to elicit a search attempt in nearly all trials. However, the initial detection rate at truffle-and-log sites was significantly greater than at truffle-only sites. Thus, although olfaction remains primary, squirrels may also benefit by foraging near woody debris as an aboveground clue to truffle locations. Pyare and Longland also note that during the course of their study, truffles often appeared to fruit in the same locations each year; hence, squirrels may improve their foraging efficiency by returning to fruiting sites on a year-to-year basis.

It can be inferred from the passage that the fact that sites with a single log, but no truffle, almost always failed to elicit a search attempt is significant to Pyare and Longland because this finding

- ☐ provides evidence suggesting that olfaction is a greater factor in some search attempts than in others
- ☐ undermines the notion that visual clues play a significant role in squirrels' foraging behavior
- ☐ indicates that only certain squirrels are capable of exploiting the presence of visual clues
- ☐ indicates that woody debris is less important in truffle foraging than other visual clues are
- ☐ suggests that the presence of woody debris is not the determining factor in the decision to forage

Select one answer choice.

Questions 7 to 9 are based on this passage.

Recently, Pyare and Longland conducted a three-year study of the mechanisms employed by northern flying squirrels to detect truffles—subterranean, edible fungi that serve as a primary food source for the squirrels. In a foraging area, squirrels successfully retrieved buried truffles that lacked aboveground, visual clues in 19 of 30 trials and did not search near sites that lacked truffles altogether, confirming the importance of olfaction (sense of smell) as the primary factor in the squirrels' foraging behavior. The study also sought to evaluate the effect of the presence of decaying logs and woody debris, since such material is often associated with fungi such as truffles. Sites with a single log, but no truffle, failed to elicit a search attempt in nearly all trials. However, the initial detection rate at truffle-and-log sites was significantly greater than at truffle-only sites. Thus, although olfaction remains primary, squirrels may also benefit by foraging near woody debris as an aboveground clue to truffle locations. Pyare and Longland also note that during the course of their study, truffles often appeared to fruit in the same locations each year; hence, squirrels may improve their foraging efficiency by returning to fruiting sites on a year-to-year basis.

It can be inferred from the passage that the fact that sites with a single log, but no truffle, almost always failed to elicit a search attempt is significant to Pyare and Longland because this finding

- ☐ provides evidence suggesting that olfaction is a greater factor in some search attempts than in others
- ☐ undermines the notion that visual clues play a significant role in squirrels' foraging behavior
- ☐ indicates that only certain squirrels are capable of exploiting the presence of visual clues
- ☐ indicates that woody debris is less important in truffle foraging than other visual clues are
- ☐ suggests that the presence of woody debris is not the determining factor in the decision to forage

Questions 7 to 9 are based on this passage.

Recently, Pyare and Longland conducted a three-year study of the mechanisms employed by northern flying squirrels to detect truffles—subterranean, edible fungi that serve as a primary food source for the squirrels. In a foraging area, squirrels successfully retrieved buried truffles that lacked aboveground, visual clues in 19 of 30 trials and did not search near sites that lacked truffles altogether, confirming the importance of olfaction (sense of smell) as the primary factor in the squirrels' foraging behavior. The study also sought to evaluate the effect of the presence of decaying logs and woody debris, since such material is often associated with fungi such as truffles. Sites with a single log, but no truffle, failed to elicit a search attempt in nearly all trials. However, the initial detection rate at truffle-and-log sites was significantly greater than at truffle-only sites. Thus, although olfaction remains primary, squirrels may also benefit by foraging near woody debris as an aboveground clue to truffle locations. Pyare and Longland also note that during the course of their study, truffles often appeared to fruit in the same locations each year; hence, squirrels may improve their foraging efficiency by returning to fruiting sites on a year-to-year basis.

Based on Pyare and Longland's study as it is presented in the passage, which of the following can be inferred about truffle-foraging among northern flying squirrels?

- ☐ When using only olfactory clues, squirrels will sometimes fail to retrieve buried truffles.
- ☐ When visual clues are present, squirrels will often initiate a search attempt even if there are no truffles.
- ☐ The rate at which squirrels successfully retrieve truffles is unrelated to the presence of visual clues.
- ☐ An exclusive reliance on olfaction can often lead squirrels to search in areas where there are no truffles.
- ☐ Squirrels that forage in the same locations every year are less likely to be successful than are squirrels that vary their foraging sites.

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In happier times, ours is a raucous, rude, cacophonous city, _____ cursing, good-natured complaining, and laughing aloud.

- ☐ an abyss of
- ☐ an oasis from
- ☐ a reminder of
- ☐ a hodgepodge of
- ☐ a refuge from
- ☐ a pastiche of

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Using elaborate costumes and lighting, dancer Loie Fuller transformed herself multiple times during a performance, thereby emphasizing the _____ of character.

- ☐ fluidity
- ☐ honesty
- ☐ universality
- ☐ sincerity
- ☐ complexity
- ☐ mutability

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Because chemistry' s position as one of the natural sciences has long seemed _____, historians have generally treated the foundation of chemical professorships as an inevitable component of the progression of universities.

- ☐ manifest
- ☐ impregnable
- ☐ relevant
- ☐ predictable
- ☐ germane
- ☐ self-evident

Select two answer choices.

Question 13 is based on this passage.

In Stanton the average number of people injured per automobile accident is consistently higher for accidents involving a taxicab than for those not involving a taxicab. Although all Stanton taxicabs are equipped with passenger seat belts, taxicab drivers report that passengers tend not to use them. It is likely, therefore, that if taxicab passengers were required to use seat belts, the number of people injured per accident would soon be no higher for taxicabs than for other automobiles.

Which of the following, if true about Stanton, most seriously weakens the argument?

- ☐ The number of automobile accidents has been declining in recent years.
- ☐ Since taxicabs are driven more miles annually than most other vehicles, they are more likely to be in an accident during any given year than is the average vehicle.
- ☐ There are more taxicabs in operation, relative to the overall number of motor vehicles, than there are in most cities of Stanton's size.
- ☐ The number of people, including the driver, who occupy a vehicle is generally greater for taxicabs than for other vehicles.
- ☐ Not all passengers in automobiles other than taxicabs use seat belts.

Select one answer choice.

Questions 14 and 15 are based on this passage.

The intense self-awareness in the soliloquies of Shakespeare's *Hamlet* (1599) is a breakthrough that was given tremendous impetus by the playwright's interest in a new literary form, the essay. Although Montaigne, the form's originator, published his first volumes of personal essays in France in 1580, English writers such as Shakespeare did not discover Montaigne until the late 1590s. Shakespeare could easily have turned to the essay earlier in his career—his French was good enough to read Montaigne in the original—but he didn't. Only at the end of the century, a cultural moment marked by a deepening interest in how subjective experience could be expressed, did Montaigne begin to speak to Shakespeare and other English writers with great immediacy.

In the passage, the function played by the highlighted portion is to

- ☐ support the contention that Montaigne influenced Shakespeare's early writings
- ☐ emphasize the extent to which writers of Shakespeare's time borrowed ideas and plotlines from one another
- ☐ argue that Shakespeare's interest in Montaigne was shaped by the prevailing cultural concerns of his time
- ☐ introduce a discussion of the factors that discouraged most English writers from reading French works in the original language
- ☐ point out that Shakespeare's education was superior to that of most other English playwrights of his time

Select one answer choice.

Questions 14 and 15 are based on this passage.

The intense self-awareness in the soliloquies of Shakespeare's *Hamlet* (1599) is a breakthrough that was given tremendous impetus by the playwright's interest in a new literary form, the essay. Although Montaigne, the form's originator, published his first volumes of personal essays in France in 1580, English writers such as Shakespeare did not discover Montaigne until the late 1590s. Shakespeare could easily have turned to the essay earlier in his career—his French was good enough to read Montaigne in the original—but he didn't. Only at the end of the century, a cultural moment marked by a deepening interest in how subjective experience could be expressed, did Montaigne begin to speak to Shakespeare and other English writers with great immediacy.

Consider each of the choices separately and select all that apply.

According to the passage, interest in the essay in England was spurred during the late 1590s by

- ☐ an increasing attention to and knowledge of French language and culture
- ☐ a wider interest in experimenting with new literary forms
- ☐ the culture's growing fascination with giving voice to the intricacies of personal experience

Quantitative Reasoning

15 Questions

26 minutes (standard time)

For each question, indicate the best answer, using the directions given. If you need more detailed directions, select **Help** at any time.

An on-screen calculator is available for each question in this section. To use the calculator, select the calculator button.

If a question has answer choices with **ovals** ☐, then the correct answer consists of a single choice. If a question has answer choices with **square boxes** ☐, then the correct answer consists of one or more answer choices. Read the directions for each question carefully. The directions will indicate if you should select one or more answer choices. To answer questions based on a data presentation, you may need to scroll or use your keyboard to access the entire presentation.

All numbers used are real numbers.

All figures are assumed to lie in a plane unless otherwise indicated.

Geometric figures, such as lines, circles, triangles, and quadrilaterals, **are not necessarily** drawn to scale. That is, you should **not** assume that quantities such as lengths and angle measures are as they appear in a figure. You should assume, however, that lines shown as straight are actually straight, points on a line are in the order shown, and more generally, all geometric objects are in the relative positions shown. For questions with geometric figures, you should base your answers on geometric reasoning, not on estimating or comparing quantities by sight or by measurement.

Coordinate systems, such as xy -planes and number lines, **are** drawn to scale; therefore you can read, estimate, or compare quantities in such figures by sight or by measurement.

Graphical data presentations, such as bar graphs, circle graphs, and line graphs, **are** drawn to scale; therefore, you can read, estimate, or compare data values by sight or by measurement.

Select **Continue** to proceed.

$$x > y > 0$$

Quantity A

$$|1 - x|$$

Quantity B

$$|x - y|$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The figure represents a cube.

Quantity A

The length of line segment AD

Quantity B

$\sqrt{2}$ times the length of line segment AC

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The number of feet in the perimeter of a rectangular game board is equal to the number of square feet in the area of the game board.

Quantity A

The width of the game board

Quantity B

2 feet

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The number of feet in the perimeter of a rectangular game board is equal to the number of square feet in the area of the game board.

Quantity A

The width of the game board

Quantity B

2 feet

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

2 feet

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The function f is defined for all numbers x by $f(x) = 2 + 3x$.

Quantity A

$$f(x+4) - f(x)$$

Quantity B

$$12$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

Interval	Frequency
$0 \leq x < 2$	2
$2 \leq x < 4$	8
$4 \leq x < 6$	7
$6 \leq x < 8$	4
$8 \leq x < 10$	11

The table shows a frequency distribution for the 32 values of x in a data set, where the values are grouped into five intervals.

Quantity A

The range of the values in the data set

Quantity B

9

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

Of the 312 employees of Company X , $\frac{1}{3}$ are in division A and the rest are in division B . Women account for $\frac{2}{3}$ of all employees, and the rest are men. If $\frac{5}{8}$ of the women are in division B , how many men are in division A ?

- ☐ 26
- ☐ 35
- ☐ 78
- ☐ 104
- ☐ 130
