

Select one entry for the blank. Fill the blank in the way that best completes the text.

Groundwater responds slowly to droughts and floods and, as a result, is much more _____ to such climate variability than are water supplies drawn from rivers or ponds.

conductive
vital
resilient
indebted
susceptible

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

If newspaper consumers are concerned about more than (i)_____ and prefer to read news that is consistent with their beliefs, then (ii)_____ is not a journalistic flaw, but, rather, a cultivated feature. In a competitive news market, producers can use slant to differentiate their products and stave off price competition.

Blank (i)

politics
accuracy
expense

Blank (ii)

bias
sensationalism
inconsistency

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Pauline Kael' s first movie review tore into Charlie Chaplin for taking up the mantle of comic artist rather than claiming his roots as slapstick clown. It might seem strange that a reviewer with such highbrow reading tastes as Kael had would attack upward-reaching film entertainers for their pretensions and champion films that were mainstream entertainments. Yet such a stance could itself be seen as (i)_____, as it (ii)_____ a certain idea of true art from (iii)_____, as if only literature should aspire to seriousness.

Blank (i)

ascetic
elitist
egalitarian

Blank (ii)

guards
redeems
displaces

Blank (iii)

enervating refinement
popular encroachment
revolutionary claims

Select one entry from each column.

Questions 4 and 5 are based on this passage.

Many people assume that artists working in the city of New York during the 1940s and 1950s looked first and foremost to European masters for their inspiration. That Eurocentric scenario, however, neglects the multicultural nature of New York and the notion of American artists as individuals. Native American artist Leon Polk Smith, who spent much of his life in the Southwest and was introduced to European modernism while a student in New York, understood what he saw from his unique cross-cultural vantage. For example, he saw the geometric style of Piet Mondrian, a European master, as an extension of the Native American art of the Southwest. The dimensions, colors, and interwoven lines of Smith's own abstract paintings resemble those of Navajo blanket wall hangings.

Consider each of the choices separately and select all that apply.

The author implies that artists working in the city of New York during the 1940s and 1950s might NOT have looked first and foremost to the European masters for their inspiration because

- ☐ New York was a multicultural city
- ☐ the artists each had their own distinctive interests
- ☐ New York was Eurocentric in nature

Select one or more answer choices.

Questions 4 and 5 are based on this passage.

Many people assume that artists working in the city of New York during the 1940s and 1950s looked first and foremost to European masters for their inspiration. That Eurocentric scenario, however, neglects the multicultural nature of New York and the notion of American artists as individuals. Native American artist Leon Polk Smith, who spent much of his life in the Southwest and was introduced to European modernism while a student in New York, understood what he saw from his unique cross-cultural vantage. For example, he saw the geometric style of Piet Mondrian, a European master, as an extension of the Native American art of the Southwest. The dimensions, colors, and interwoven lines of Smith's own abstract paintings resemble those of Navajo blanket wall hangings.

In the context in which it appears, "neglects" most nearly means

- ☐ distorts
- ☐ debases

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The rate of sediment deposition may be _____ desertification in Central Asia: data from a Tajik site show the rate to have increased during Pleistocene glacial periods as aridity increased.

- ☐ a restraint on
- ☐ a gauge of
- ☐ an indicator of
- ☐ a factor in
- ☐ a hedge against
- ☐ a consequence of

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In this otherwise _____ study, the internal tensions resulting from the increasing integration of the United States with the world economy are simply mentioned rather than analyzed.

- ☐ tedious
- ☐ thorough
- ☐ biased
- ☐ exhaustive
- ☐ superficial
- ☐ shallow

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

When Kim Dae Jung was decisively elected South Korea's president in December 1997, he was considered something of _____, but nevertheless the right man for the time and the job.

- ☐ an unknown
- ☐ an expert
- ☐ a maverick
- ☐ a nonconformist
- ☐ a dilettante
- ☐ an authority

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The action in Zadie Smith's novel *On Beauty* is mediated by an unabashedly _____ narrator who does not hesitate to inform us, as once upon a time the narrators of novels were wont to do, how we behave in general and how society usually works.

- ☐ knowing
- ☐ obtrusive
- ☐ conspicuous
- ☐ antiquated
- ☐ mysterious
- ☐ secretive

Select two answer choices.

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again. Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. Raw data are not an intellectual commons, as are collections. The experimental sciences operate more in a market economy than a moral one.

The passage is primarily concerned with

- ☐ resolving a dispute
- ☐ defending a practice
- ☐ summarizing a dilemma
- ☐ delineating a difference
- ☐ explaining an anomaly

Select one answer choice.

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again. Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. Raw data are not an intellectual commons, as are collections. The experimental sciences operate more in a market economy than a moral one.

The author of the passage would most likely agree with which of the following statements about manufactured data?

- ☐ They are essential to the common good.
- ☐ They cannot be easily replicated.
- ☐ They can play a key role in career advancement.
- ☐ They cannot be adequately interpreted until they have been published.
- ☐ They are often manipulated to support specific hypotheses.

Select one answer choice.

Questions 10 to 12 are based on this passage.

Only in the collecting sciences are raw data—specimens, fossils, artifacts—regarded as communal property, to which legitimate practitioners have rights of access. Collections are an intellectual commons on which all producers depend, and the owners or keepers of collections are understood to be responsible for keeping them in good order and accessible to users. These moral precepts doubtless reflect the fact that important collections tend to end up in public museums. But I think they also derive from the reality that found objects, unlike manufactured data, are a unique and irreplaceable resource, the loss of which deprives all practitioners of the means of best practice.

The moral economy of facts is quite different in sciences that generate facts artificially by measuring or experimenting. In these sciences raw data are regarded as private: because, I think, they are in principle unlimited and if lost can be produced again. Manufactured data become public only when published, and though publishing is expected, it is also understood to be selective and a personal matter, impelled more by imperatives of ambition and career than moral obligation. Individuals may perish professionally if they neglect to publish, but if they do perish someone else can always produce equivalent data, so there is no loss to the common good. In the context of the passage as a whole, the highlighted sentence serves to

- ☐ warn of the consequences of overlooking a point made in the first sentence of the passage
- ☐ cite an exception to a principle described in the preceding sentence
- ☐ present a conditional scenario that is confirmed in the subsequent sentence
- ☐ provide a rationale for an assertion made in the final sentence of the passage
- ☐ predict an outcome that is refuted in the final sentence of the passage

Select one answer choice.

The average (arithmetic mean) of 12, x , y , and 20 is equal to the average of 16, m , r , and 16.

Quantity A

The average of x and y

Quantity B

The average of m and r

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

$$x \neq 0$$

Quantity A

$$0.2x^2$$

Quantity B

$$\left(\frac{3}{7}x\right)^2$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$x^2 + x - 6 = 0$$

Quantity A

$$\frac{1}{1+3^x}$$

Quantity B

$$\frac{1}{1+5^x}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

A certain type of code is a list of 4 identical asterisks and 2 identical dots in any order. For example, * * • • * * is one such code.

Quantity A

Quantity B

The number of possible codes of this type

15

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

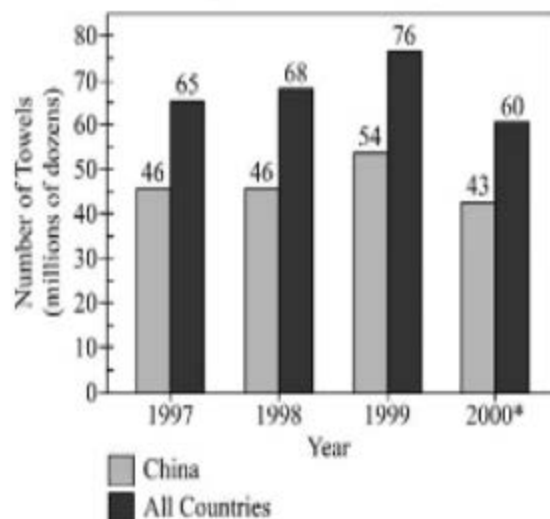

If w , x , y , and z are the coordinates of the points on the number line shown, which of the following products is the greatest?

- ☐ wx
- ☐ wy
- ☐ wz
- ☐ xy
- ☐ xz

Questions 6–8 are based on the following data.

For each of the years 1997 through 2000,* the graph shows the number of towels imported to Japan from China, and the total number of towels imported to Japan from all countries, including China.

Number of Towels Imported to Japan,
1997–2000*
(in millions of dozens**)

* For the first nine months of 2000

** 1 dozen = 12

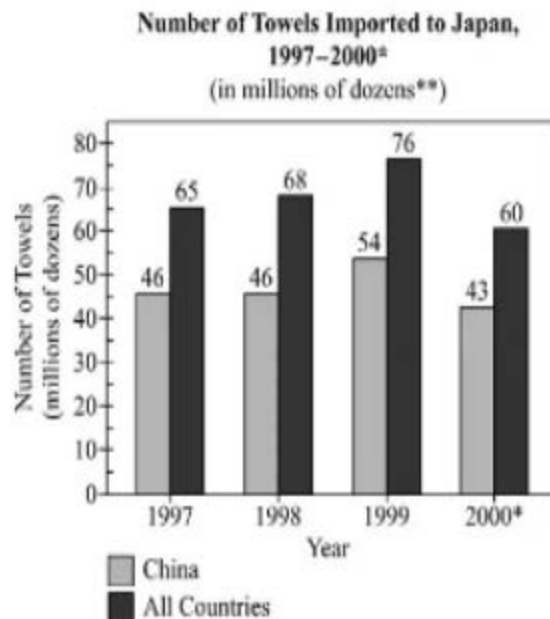

In 1998, how many of the imported towels were not imported from China?

- ☐ 260 million
- ☐ 264 million
- ☐ 268 million
- ☐ 272 million
- ☐ 276 million

Select one answer choice.

Questions 6–8 are based on the following data.

For each of the years 1997 through 2000,* the graph shows the number of towels imported to Japan from China, and the total number of towels imported to Japan from all countries, including China.

* For the first nine months of 2000

** 1 dozen = 12

If the average (arithmetic mean) number of towels imported from China per month was the same for the last 3 months of 2000 as it was for the first 9 months of 2000, approximately how many million dozen towels were imported from China during the 12 months of 2000?

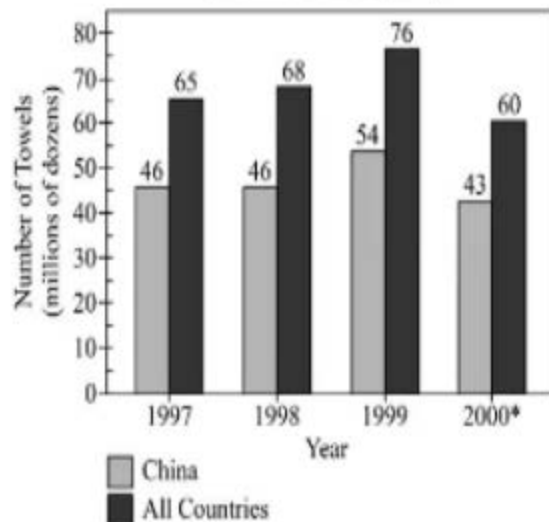

- ☐ 57
☐ 63
☐ 76
☐ 80
☐ 86

Select one answer choice.

Questions 6–8 are based on the following data.

For each of the years 1997 through 2000,* the graph shows the number of towels imported to Japan from China, and the total number of towels imported to Japan from all countries, including China.

**Number of Towels Imported to Japan,
1997–2000***
(in millions of dozens**)

* For the first nine months of 2000

** 1 dozen = 12

In 1999, the ratio of the number of towels imported from China to the total number of towels imported from countries other than China was closest to which of the following?

- ☐ 7 to 2
- ☐ 3 to 1
- ☐ 5 to 2
- ☐ 2 to 1
- ☐ 3 to 2

Select one answer choice.

How many integer values of x satisfy the inequality $|(-x)^{-3}| < -1,000$?

- ☐ None
- ☐ One
- ☐ Two
- ☐ Three
- ☐ More than three

Select one answer choice.

Cylindrical can A contains five servings of soup when full. How many servings of the soup are contained in a full cylindrical can with 2 times the diameter and 3 times the height of can A ?

- ☐ 30
- ☐ 60
- ☐ 90
- ☐ 120
- ☐ 210

Select one answer choice.

A furniture store purchased sofas for a wholesale price of \$400 each and sold most of them for a retail price of \$560 each. In a summer sale, the retail price of the last few sofas was reduced by x dollars, and they were sold at this reduced price. The store's profit from selling the last sofa was more than 15 percent of its wholesale price. Which of the following could be the value of x ?

Indicate all such values.

☐ 50

☐ 75

☐ 100

☐ 125

If the degree measures of the three angles of a triangle are consecutive even integers, what is the measure of the smallest angle of the triangle?

degrees

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

Select one entry for the blank. Fill the blank in the way that best completes the text.

The fanciful notion that the legislative initiative would bring unlimited social benefits has soured into an equally _____ mood of skepticism and distrust.

valid
pessimistic
unanticipated
pragmatic
baseless

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

The pronghorn antelope in northern Mexico may be viewed as (i) _____ species, as most of the North American prairie, its chief historical habitat, has (ii) _____.

Blank (i)

a relict
an endemic
a hybrid

Blank (ii)

been closely scrutinized
been taken for granted
disappeared over time

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

It is true that with too much exposure, one can weary of visionary poems; their rhetoric can become (i)_____. And yet, there are few among us who are completely (ii)_____ visionary rhetoric for the obvious reason that we do, on rare occasions, have an experience that (iii)_____ and leaves us baffled, deeply moved, and ready to believe things we hadn' t dreamed of.

Blank (i)

engaging
insufferable
prescient

Blank (ii)

immune to
immersed in
comfortable with

Blank (iii)

passes by unnoticed
lifts us out of the ordinary
fits all expectations

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Statistics is the branch of applied mathematics that studies ways of drawing inferences from limited and imperfect data. Of course, if all data sources were totally (i)_____, statisticians could do little but (ii)_____ every conclusion with “but we could be wrong about this.” A mathematical science of statistics is possible because, although repeating an experiment numerous times may not yield uniform results, some results are more (iii)_____ than others.

Blank (i)

empirical
capricious
defensible

Blank (ii)

qualify
affirm
substantiate

Blank (iii)

dubious
unexpected
common

Select one entry from each column.

Questions 5 and 6 are based on this passage.

Bowles et al. posit a positive relationship between Scandinavian settlement locations during the period of Viking expansion, beginning in the 8th century, and availability of bog iron at these locations. They cite Eriksson' s 1961 map that plots locations of major settlements in relation to known areas where bog iron could have been extracted. Two settlements in particular, Telemark and Bergslagen, were near numerous pockets of available bog iron. The map shows a lack of settlements where evidence for bog iron deposits is lacking. Trondheim is the only settlement of a noticeable distance from any deposit. It may be that our knowledge is incomplete regarding the location of bog iron deposits at that time, or Trondheim may have been used to gather other resources.

The author mentions "other resources" primarily in order to

- ☐ acknowledge that bog iron was only one of many resources required by Viking settlements
- ☐ provide an interpretation of a particular ambiguity in Eriksson' s map of Viking settlements
- ☐ offer a possible explanation for differences in the ways in which various Viking settlements exploited natural resources
- ☐ challenge a particular assumption about the resemblance of Trondheim to Telemark and Bergslagen
- ☐ introduce a possible explanation for a discrepancy between the evidence provided by Eriksson' s map and the view put forth by Bowles et al.

Select one answer choice.

Questions 5 and 6 are based on this passage.

Bowles et al. posit a positive relationship between Scandinavian settlement locations during the period of Viking expansion, beginning in the 8th century, and availability of bog iron at these locations. They cite Eriksson's 1961 map that plots locations of major settlements in relation to known areas where bog iron could have been extracted. Two settlements in particular, Telemark and Bergslagen, were near numerous pockets of available bog iron. The map shows a lack of settlements where evidence for bog iron deposits is lacking. Trondheim is the only settlement of a noticeable distance from any deposit. It may be that our knowledge is incomplete regarding the location of bog iron deposits at that time, or Trondheim may have been used to gather other resources.

The author of the passage would be most likely to agree with which of the following assertions about Trondheim?

- ☐ It was likely established as a settlement before the Vikings began to use bog iron.
- ☐ It could possibly have resembled Telemark and Bergslagen in its proximity to bog iron deposits.
- ☐ It was more distant from other population centers than were Telemark and Bergslagen.
- ☐ Its inhabitants likely had access to a wider range of natural resources than did those who lived in Telemark and Bergslagen.
- ☐ Its location may have prevented it from becoming as important a settlement as were those nearer to bog iron deposits.

Select one answer choice.

Questions 7 to 9 are based on this passage.

The standard way to hard-boil eggs—ten minutes in boiling water—is far from ideal, according to physical chemist Hervé This. Egg whites and yolks are made up of protein and water; yolks contain fat as well. As eggs cook, their balled-up proteins uncoil into strands, and the strands bind together to form an intricate mesh that traps water. In essence, the proteins form a gel, a liquid dispersed in a solid. Boiling causes too many egg proteins to bind and form dense meshes, yielding rubbery egg whites and sandy, grayish yolks.

But exploiting egg-protein chemistry allows egg cooking to be very precisely calibrated. Ovotransferrin, the first of the egg-white proteins to uncoil, begins to set at around 61°C. Ovalbumin, the most abundant egg-white protein, coagulates at 84°C. Yolk proteins mostly fall in between, with most starting to solidify when they approach 70°C. Using a laboratory oven, Dr. This cooks eggs at 65°C for about an hour, timing not being critical. The results, with the whites delicately set and the yolks still orange and soft, make it clear why 65-degree eggs are becoming the rage among chefs in France. (Salmonella cannot survive more than a few minutes at 60°C, so a 65-degree egg cooked for an hour should be quite safe.)

In the context of the passage, the highlighted sentence presents

- ☐ an undesirable consequence that can be avoided by adopting a particular method
- ☐ the fundamental process that underlies the subject matter of the passage
- ☐ the new insight that allowed an improved process to be conceived
- ☐ an explanation for why an established method is seriously defective
- ☐ the method that was used prior to the work the passage describes

Select one answer choice.

Questions 7 to 9 are based on this passage.

The standard way to hard-boil eggs—ten minutes in boiling water—is far from ideal, according to physical chemist Hervé This. Egg whites and yolks are made up of protein and water; yolks contain fat as well. As eggs cook, their balled-up proteins uncoil into strands, and the strands bind together to form an intricate mesh that traps water. In essence, the proteins form a gel, a liquid dispersed in a solid. Boiling causes too many egg proteins to bind and form dense meshes, yielding rubbery egg whites and sandy, grayish yolks.

But exploiting egg-protein chemistry allows egg cooking to be very precisely calibrated. Ovotransferrin, the first of the egg-white proteins to uncoil, begins to set at around 61°C. Ovalbumin, the most abundant egg-white protein, coagulates at 84°C. Yolk proteins mostly fall in between, with most starting to solidify when they approach 70°C. Using a laboratory oven, Dr. This cooks eggs at 65°C for about an hour, timing not being critical. The results, with the whites delicately set and the yolks still orange and soft, make it clear why 65-degree eggs are becoming the rage among chefs in France. (Salmonella cannot survive more than a few minutes at 60°C, so a 65-degree egg cooked for an hour should be quite safe.)

It can be inferred from the passage that in a 65-degree egg

- ☐ the ovotransferrin has not yet formed a gel
- ☐ the yolk has not reached as high a temperature as the white
- ☐ most of the yolk proteins have started to solidify
- ☐ most of the ovalbumin remains balled up
- ☐ the fats in the yolk have not undergone any change

Questions 7 to 9 are based on this passage.

The standard way to hard-boil eggs—ten minutes in boiling water—is far from ideal, according to physical chemist Hervé This. Egg whites and yolks are made up of protein and water; yolks contain fat as well. As eggs cook, their balled-up proteins uncoil into strands, and the strands bind together to form an intricate mesh that traps water. In essence, the proteins form a gel, a liquid dispersed in a solid. Boiling causes too many egg proteins to bind and form dense meshes, yielding rubbery egg whites and sandy, grayish yolks.

But exploiting egg-protein chemistry allows egg cooking to be very precisely calibrated. Ovotransferrin, the first of the egg-white proteins to uncoil, begins to set at around 61°C. Ovalbumin, the most abundant egg-white protein, coagulates at 84°C. Yolk proteins mostly fall in between, with most starting to solidify when they approach 70°C. Using a laboratory oven, Dr. This cooks eggs at 65°C for about an hour, timing not being critical. The results, with the whites delicately set and the yolks still orange and soft, make it clear why 65-degree eggs are becoming the rage among chefs in France. (Salmonella cannot survive more than a few minutes at 60°C, so a 65-degree egg cooked for an hour should be quite safe.)

It can be inferred from the passage that Hervé This would likely agree that in cooking eggs it is best to

- ☐ cause certain of the proteins to uncoil
- ☐ prevent the proteins from forming a gel
- ☐ pay more attention to the whites than the yolks
- ☐ precisely control both time and temperature
- ☐ ensure that fats and proteins are all transformed

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The second group of volunteer excavators was far more _____ than the first, and consequently the obstructing material was removed much more rapidly during the second shift.

- ☐ diligent
- ☐ incapacitated
- ☐ experienced
- ☐ punctual
- ☐ debilitated
- ☐ industrious

Tender yet never _____, the memoir engages the reader without resorting to clichés.

- ☐ saccharine
- ☐ unsentimental
- ☐ cloying
- ☐ long-winded
- ☐ pragmatic
- ☐ affecting

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

One of the incongruities of modern industry, according to Reck and Graedel, is that we manufacture modern products with the most sophisticated technologies available yet generally adopt relatively _____ approaches to recycling them.

- ☐ economical
- ☐ basic
- ☐ crude
- ☐ conventional
- ☐ inefficient
- ☐ inexpensive

Select two answer choices.

Question 13 is based on this passage.

Sportfishers introduced the zander, a type of perch, to Britain's rivers and canals in the 1970s. Because zander eat large numbers of smaller fish, they have had a devastating effect on native fish populations. To protect the native fish, a government program removed a significant proportion of the zander from Britain's waterways last year. Surprisingly, this year the loss of native fish to zander has been greater than ever before.

Which of the following, if true, would most help to explain the greater effect of zander on the native fish population?

- ☐ The climate in Britain is very similar to the climate in regions to which zander are native.
- ☐ Most of the zander removed were fully grown, and fully grown zander eat large numbers of smaller zander.
- ☐ Every year a large number of zander are caught by sportfishers in Britain's waterways.
- ☐ Previous government programs designed to remove nonnative species from Britain's waterways have failed.
- ☐ Zander are just one of several nonnative fish that prey on the other fish found in Britain's waterways.

Select one answer choice.

Questions 14 and 15 are based on this passage.

Elizabeth Bishop's *Complete Poems, 1927–1979* has come to seem to most readers so achieved and sufficient a life's work that it is hard not to lose sight of how slowly Bishop wrote poems and of how few poems, finally, she completed. But the size and pace of her output were always in her own eyes a failing (vaguely moral in complexion) for which she apologized throughout her career. The small, manageable size of Bishop's body of work has facilitated its extraordinary critical reception since her death. Yet the size of her work is also a sign of Bishop's alienation; that is, her uneasy, resistant relation to the literary culture that today claims her as the major poet of her generation.

Consider each of the choices separately and select all that apply.

The passage indicates that the small size of Bishop's body of work contributed to bringing about which of the following?

- ☐ Bishop's alienation from the literary culture of her generation
- ☐ The favorable scholarly attention that Bishop's work has received since her death
- ☐ An interest among readers regarding why Bishop wrote so slowly

Select one or more answer choices.

Questions 14 and 15 are based on this passage.

Elizabeth Bishop's *Complete Poems, 1927–1979* has come to seem to most readers so achieved and sufficient a life's work that it is hard not to lose sight of how slowly Bishop wrote poems and of how few poems, finally, she completed. But the size and pace of her output were always in her own eyes a failing (vaguely moral in complexion) for which she apologized throughout her career. The small, manageable size of Bishop's body of work has facilitated its extraordinary critical reception since her death. - ☐ hue
- ☐ intricacy
- ☐ personality

Select one answer choice.

$$\frac{1}{x} < 0$$

Quantity A

$$x$$

Quantity B

$$-\frac{1}{x}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

At a car dealership, Jason earned a total of N dollars in commissions for making 15 sales. If the commission on Jason's last sale had been \$210 greater, his average (arithmetic mean) commission on the 15 sales would have been x dollars greater.

Quantity A

x

Quantity B

16

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Quantity A

The number of integers n , where $100 < n < 200$, that are multiples of both 3 and 5

Quantity B

7

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

$$x^2 - x > 0 \text{ and } |x| < 1$$

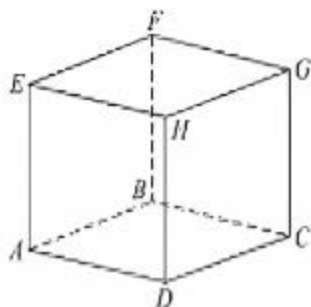

Quantity A

$$|x|$$

Quantity B

$$x$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

The cube has vertices A , B , C , D , E , F , G , and H and edges of length 1. Line segments BH and EG are not shown.

Quantity A

The measure of angle BHD

Quantity B

The measure of angle FGE

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Antonia is driving a bus to City A. When she has driven half the total distance to the city, she notices that she has driven for 12 hours and averaged 35 miles per hour. She was scheduled for 19 hours driving time for the entire journey to City A. If she is to arrive exactly on schedule, at what average speed, in miles per hour, must she drive the second half of the distance?

- ☐ 40
- ☐ 45
- ☐ 50
- ☐ 55
- ☐ 60

6			3
	p	x	
	y	q	
11			14

In the table above, if the sum of the numbers on each main diagonal is equal to the sum of the numbers in the four corners, what is the value of $(p + q) - (x + y)$?

- ☐ -6
- ☐ 0
- ☐ 6
- ☐ 16
- ☐ It cannot be determined from the information given.

In a certain election, $\frac{3}{5}$ of the voters in District K and $\frac{1}{2}$ of the voters in District P voted for the candidate Miguel Garcia. If 4 times as many people voted in District K as voted in District P , what percent of the voters in both districts combined voted for Miguel Garcia?

- ☐ 52%
- ☐ 54%
- ☐ 55%
- ☐ 56%
- ☐ 58%

Select one answer choice.

Which of the following represents the solution of $|x - 1| < 2$?

Select one answer choice.

By draining 40 gallons of water from a tank, the amount of water in the tank was decreased from $\frac{1}{5}$ of the tank's full capacity to $\frac{2}{11}$ of the tank's full capacity. Water was then added to the tank until the tank was full. How many gallons of water were added to the tank?

☐ 1,800

☐ 2,000

☐ 2,200

☐ 2,400

☐ 2,600

Select one answer choice.

A college student purchased textbooks in three subjects—biology, calculus, and economics. The price of the biology textbook was 25 percent less than the price of the calculus textbook and 5 percent greater than the price of the economics textbook. The price of the calculus textbook was what percent greater than the price of the economics textbook?

- ☐ 20%
- ☐ 30%
- ☐ 40%
- ☐ 80%
- ☐ 140%

Select one answer choice.

What is the least integer that can be expressed as a product of four different integers, each of which has a value between -5 and 4 , inclusive?

- ☐ -60 ☐ -120 ☐ -180 ☐ -240 ☐ -500

Select one answer choice.

In a group of 10 people, the median height is 70 inches, the average (arithmetic mean) height is 70.5 inches, and the range of the heights is 12 inches. If an additional person who is 74 inches tall joins the group, which of the three statistics must change?

- ☐ Average only
- ☐ Median only
- ☐ Range only
- ☐ Average and median
- ☐ Average and range

An ice-cream shop features 6 flavors of ice cream each month. The shop offers a monthly special in which a customer can select a combination of 2, 3, or 4 of the featured flavors. Which of the following statements are true?

Indicate all such statements.

- ☐ The number of combinations of 2 featured flavors is 15.
- ☐ The number of combinations of 3 featured flavors is 20.
- ☐ The number of combinations of 4 featured flavors is 24.

In the xy -plane, the point $(3p, 5p - 1)$ lies on the line with equation $y = -\frac{1}{2}x - \frac{5}{3}$.

What is the value of p ?

Give your answer as a fraction.

Enter your answer as a fraction, with the numerator and denominator in their respective answer boxes. Backspace to erase.
