Select one entry for the blank. Fill the blank in the way that best completes the text.

The two scientists' achievements are _____ only in a narrowly conceived history of science: although both erred in scientific judgment, both also defended science in its infancy and established it as an intelligible and useful activity.

fundamental
indistinct
progressive
negligible
antithetical

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Although movie critic Pauline Kael had a distaste for sycophancy, she also had a need for (i) _____; as a consequence of these competing feelings, she sent very (ii) _____ signals to friends and colleagues.

Blank (i)

solitude
obeisance
clarity

Blank (ii)

direct
subtle
mixed

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Most movie sound tracks lean so heavily on a few preprocessed musical devices—those swells of strings and cymbals designed to manipulate our emotions in (i)_____ ways—that when a composer (ii)_____ a more personal language, the effect is (iii)_____: an entire dimension of the film experience is liberated from cliché.

Blank (i)

unprecedented
predictable
provocative

Blank (ii)

resists
adopts
eschews

Blank (iii)

meaningless
revelatory
disappointing

Select one entry from each column.

Questions 4 and 5 are based on this passage.

In North America, crows have historically antagonized humans by ravaging corn crops, but advancing urbanization has recently made humans more tolerant of crows, and crows' wariness has accordingly diminished. The future demeanor of the American crow (*Corvus brachyrhynchos*) is suggested by intercontinental analogy to India's house crow (*Corvus splendens*), which has lived for many centuries in an essentially unarmed, animal-friendly, and densely populated culture. Its audacity extends to stealing food from street vendors and entering dwellings to remove food from the table. The extreme watchfulness of the American crow has grown out of a long history of persecution. As people treat crows with insouciance rather than aggression, less wariness results in reproductive success, and another kind of corvine conduct asserts itself.

Which of the following generalizations most directly underlies the author's central point?

- ☐ Two different species of the same genus of birds may differ greatly in their characteristic behavior for reasons that have nothing to do with the environment in which they live.
- ☐ Degrees of wariness tend to differ significantly among individuals of the same animal species as well as between different species within the same genus.
- ☐ As human populations become more urbanized, humans become less attuned to the behavior of animals in their environment in ways that can negatively affect animals' reproductive success.
- ☐ A given behavioral trait can have either a positive or negative effect on an animal's reproductive success depending on the behavior of humans in the animal's environment.
- ☐ Human attitudes toward a given animal species tend to be somewhat arbitrary and are subject to change over time.

Select one answer choice.

Questions 4 and 5 are based on this passage.

In North America, crows have historically antagonized humans by ravaging corn crops, but advancing urbanization has recently made humans more tolerant of crows, and crows' wariness has accordingly diminished. The future demeanor of the American crow (*Corvus brachyrhynchos*) is suggested by intercontinental analogy to India's house crow (*Corvus splendens*), which has lived for many centuries in an essentially unarmed, animal-friendly, and densely populated culture. Its audacity extends to stealing food from street vendors and entering dwellings to remove food from the table. The extreme watchfulness of the American crow has grown out of a long history of persecution. As people treat crows with insouciance rather than aggression, less wariness results in reproductive success, and another kind of corvine conduct asserts itself.

The author implies which of the following about the "insouciance" mentioned in the passage?

- ☐ It reflects an advance in our understanding of crows' behavior.
- ☐ It has increased in one region of the world as urbanization has grown.
- ☐ It is likely to increase in a particular region as farming in that region increases.
- ☐ It reflects the influence of one culture's attitudes toward animals on those of another culture.
- ☐ It can have a positive influence on a given species' reproductive success in some contexts but a negative effect in others.

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In the eighteenth and nineteenth centuries, Native American nations were hardly _____ entities: they waxed and waned, with some gaining power and others losing it.

- ☐ authoritarian
- ☐ static
- ☐ cohesive
- ☐ fragile
- ☐ unvarying
- ☐ despotic

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Many people remember a time when cutting-edge architects, who are these days treated like celebrities, had _____ relationship with the public: for much of the 1960s, big new buildings in cities were often cause for hostility, not celebration.

- ☐ an antagonistic
- ☐ an inimical
- ☐ an autocratic
- ☐ a symbiotic
- ☐ an indifferent
- ☐ an apathetic

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Only novel ideas should be awarded patents; if a concept is _____ to practitioners in a given field or has previously been published in almost any fashion, that fact should invalidate the application.

- ☐ lucrative
- ☐ manifest
- ☐ presented
- ☐ described
- ☐ obvious
- ☐ rewarding

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In modern agriculture, crop growth and crop protection can be viewed as _____ processes: by encouraging rapid growth with generous fertilizer treatments we may in some cases unintentionally reduce the ability of plants to defend themselves.

- ☐ reciprocal
- ☐ autonomous
- ☐ competing
- ☐ harmful
- ☐ antagonistic
- ☐ independent

Select two answer choices.

Questions 10 to 12 are based on this passage.

Pueblo Bonito, the most impressive of the “great houses” at the prehistoric Chaco Canyon site in New Mexico, comprised over 600 rooms and 4 to 5 stories. Traditional interpretations have viewed the great houses as almost entirely residential, with some archaeologists estimating the population of Pueblo Bonito at 1,200. But Windes recently challenged this view by pointing out the paucity of hearths recorded during the excavation of Pueblo Bonito, which revealed only 3 upper-story hearths, in contrast to 59 ground-floor hearths: habitation rooms would have required hearths for cooking and heat.

It is possible, however, that the collapse of upper-story floors disturbed evidence of upper-story hearths to such an extent that they were not revealed by early excavations such as those conducted by Pepper’ s field crews in the 1890s and Judd’ s in the 1920s. Additionally, reliance on room features for early population estimates is complicated by the Chacoans’ later remodeling, especially given Judd’ s disinclination to destroy later structures and features to expose earlier ones. The failure of early excavations to strip off intact floors may have concealed evidence of hearths in upper-story rooms.

The author of the passage would be most likely to agree with which of the following statements about Windes’ argument?

- ☐ It relies on evidence that is irrelevant to the examination of structures as large as Pueblo Bonito.
- ☐ It fails to acknowledge crucial evidence from great houses other than Pueblo Bonito.
- ☐ It fails to incorporate crucial evidence from excavations before the 1920s.
- ☐ It is based on a false notion about the significance of hearths.
- ☐ It is based on evidence that may be incomplete.

Select one answer choice.

Questions 10 to 12 are based on this passage.

Pueblo Bonito, the most impressive of the “great houses” at the prehistoric Chaco Canyon site in New Mexico, comprised over 600 rooms and 4 to 5 stories. Traditional interpretations have viewed the great houses as almost entirely residential, with some archaeologists estimating the population of Pueblo Bonito at 1,200. But Windes recently challenged this view by pointing out the paucity of hearths recorded during the excavation of Pueblo Bonito, which revealed only 3 upper-story hearths, in contrast to 59 ground-floor hearths: habitation rooms would have required hearths for cooking and heat.

It is possible, however, that the collapse of upper-story floors disturbed evidence of upper-story hearths to such an extent that they were not revealed by early excavations such as those conducted by Pepper’ s field crews in the 1890s and Judd’ s in the 1920s. Additionally, reliance on room features for early population estimates is complicated by the Chacoans’ later remodeling, especially given Judd’ s disinclination to destroy later structures and features to expose earlier ones. The failure of early excavations to strip off intact floors may have concealed evidence of hearths in upper-story rooms.

According to the passage, archaeologists have traditionally believed which of the following about the great houses of Chaco Canyon?

- ☐ Few of their upper-story rooms had hearths.
- ☐ Few of their rooms were used for food preparation.
- ☐ Some of their habitation rooms lacked hearths.
- ☐ Most of them were larger than Pueblo Bonito.
- ☐ Most of their rooms were habitation rooms.

Select one answer choice.

Questions 10 to 12 are based on this passage.

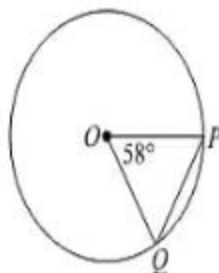

Pueblo Bonito, the most impressive of the “great houses” at the prehistoric Chaco Canyon site in New Mexico, comprised over 600 rooms and 4 to 5 stories. Traditional interpretations have viewed the great houses as almost entirely residential, with some archaeologists estimating the population of Pueblo Bonito at 1,200. But Windes recently challenged this view by pointing out the paucity of hearths recorded during the excavation of Pueblo Bonito, which revealed only 3 upper-story hearths, in contrast to 59 ground-floor hearths: habitation rooms would have required hearths for cooking and heat.

It is possible, however, that the collapse of upper-story floors disturbed evidence of upper-story hearths to such an extent that they were not revealed by early excavations such as those conducted by Pepper’ s field crews in the 1890s and Judd’ s in the 1920s. Additionally, reliance on room features for early population estimates is complicated by the Chacoans’ later remodeling, especially given Judd’ s disinclination to destroy later structures and features to expose earlier ones. The failure of early excavations to strip off intact floors may have concealed evidence of hearths in upper-story rooms.

It can be inferred from the passage that Windes would be most likely to agree with which of the following statements about room usage in Pueblo Bonito?

- ☐ Upper-story rooms were rarely used as storage areas.
- ☐ Rooms that were remodeled were most likely to have been residential rooms.
- ☐ The majority of residential rooms were located on the ground floor.
- ☐ Early excavations of Pueblo Bonito disturbed much of the evidence indicating room usage.
- ☐ Upper-story rooms with hearths were probably used for different purposes than were lower-story rooms with hearths.

Select one answer choice.

The circle with center O has radius r .

Quantity A

The length of chord PQ

Quantity B

r

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$x = 10^{10}$$

$$y = 10^{-10}$$

Quantity A

$$\frac{x+y}{x+2y}$$

Quantity B

$$\frac{1}{2}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

x and y are positive.
 a is 80 percent of x .
 b is 70 percent of y .

Quantity A

The average (arithmetic mean) of
 a and b

Quantity B

$$\frac{0.75(x + y)}{2}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Jean used a total of w cans of cat food last week to feed the several cats that she owns. The number of cans of cat food per day that Jean used last week to feed each cat was z , where $z > 0$.

Quantity A

The number of cats that Jean owns

Quantity B

$$\frac{w}{7z}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

k , m , and p are consecutive positive integers, and $k < m < p$. If $k + p$ is a multiple of 3, which of the following must also be a multiple of 3?

- ☐ k
- ☐ m
- ☐ p
- ☐ $k - 1$
- ☐ $p + 1$

Questions 6 to 8 are based on the following data.

Selected Statistics for Five European Airlines, June 2007

Airline	Passengers		Flights		Passenger Kilometers* (in millions)
	Number (in thousands)	Percent Increase from June 2006	Number (in thousands)	Percent on Time	
<i>A</i>	1,111	9%	25	75%	654
<i>B</i>	614	10%	14	74%	410
<i>C</i>	508	9%	13	83%	260
<i>D</i>	436	19%	5	80%	255
<i>E</i>	404	52%	10	70%	284

*Passenger kilometers for an airline are computed by multiplying for each flight the number of passengers on the flight by the number of kilometers flown and then adding these products for all flights of the airline.

Of all the passengers carried in June 2007 by the airlines shown, approximately what fraction was carried by Airline *A*?

☐ $\frac{1}{3}$

☐ $\frac{1}{4}$

☐ $\frac{1}{5}$

☐ $\frac{1}{8}$

☐ $\frac{1}{10}$

Select one answer choice.

Questions 6 to 8 are based on the following data.

Selected Statistics for Five European Airlines, June 2007

Airline	Passengers		Flights		Passenger Kilometers* (in millions)
	Number (in thousands)	Percent Increase from June 2006	Number (in thousands)	Percent on Time	
<i>A</i>	1,111	9%	25	75%	654
<i>B</i>	614	10%	14	74%	410
<i>C</i>	508	9%	13	83%	260
<i>D</i>	436	19%	5	80%	255
<i>E</i>	404	52%	10	70%	284

*Passenger kilometers for an airline are computed by multiplying for each flight the number of passengers on the flight by the number of kilometers flown and then adding these products for all flights of the airline.

For the airlines shown, what was the median of the percents of flights that were not on time in June 2007?

- ☐ 20%
 ☐ 25%
 ☐ 30%
 ☐ 70%
 ☐ 75%

Select one answer choice.

Questions 6 to 8 are based on the following data.

Selected Statistics for Five European Airlines, June 2007

Airline	Passengers		Flights		Passenger Kilometers* (in millions)
	Number (in thousands)	Percent Increase from June 2006	Number (in thousands)	Percent on Time	
<i>A</i>	1,111	9%	25	75%	654
<i>B</i>	614	10%	14	74%	410

<i>D</i>	436	19%	5	80%	255
<i>E</i>	404	52%	10	70%	284

*Passenger kilometers for an airline are computed by multiplying for each flight the number of passengers on the flight by the number of kilometers flown and then adding these products for all flights of the airline.

For which of the airlines shown was the average number of passengers per flight in June 2007 greatest?

☐ *A*

☐ *B*

☐ *C*

☐ *D*

☐ *E*

Select one answer choice.

Two sprinklers, R and T , disperse water over separate circular regions. Sprinkler R covers a circular region with a radius of 18 feet, while sprinkler T covers a circular region with a radius of 4 feet. What is the ratio of the area of the region covered by sprinkler R to the area of the region covered by sprinkler T ?

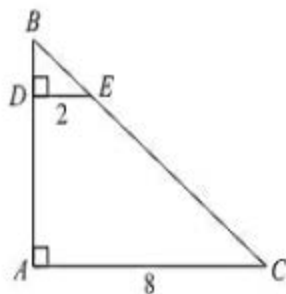

- ☐ $\frac{81}{4}$ ☐ $\frac{9}{2}$ ☐ $\frac{3\sqrt{2}}{2}$ ☐ $\frac{2}{9}$ ☐ $\frac{4}{81}$

The ratio of a to $a + b$ is 4 to 7. If a and b are positive integers, which of the following is NOT a possible value of b ?

- ☐ 9
- ☐ 15
- ☐ 27
- ☐ 42
- ☐ 50

Select one answer choice.

In the figure shown, if $AB = 6$, what is the length of EC ?

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

Carlos owns twice as many books as Surya and one-third as many books as Ian. Ian owns 10 more books than Emma.

Which of the following statements individually provide(s) sufficient additional information to determine how many books Carlos owns?

Indicate all such statements.

- ☐ Emma owns 5 times as many books as Surya.
- ☐ Emma owns 50 books.
- ☐ Emma owns 30 more books than Carlos.

Many readers today consider the moral sentiments expressed in the ancient writer' s work to be quite vapid, and in the seventeenth century they were similarly regarded as _____.

jejune
didactic
dogmatic
tendentious
arcane

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

When an ideologue of one persuasion reverses course and embraces the views of erstwhile opponents, those whose views the convert adopts may feel vindicated. Still, one wants a person making a political about-face to (i)_____ of his or her previous allegiances: a reversal without a (ii)_____ is less than satisfying.

Blank (i)

Blank (ii)

acknowledge the erroneousness	recantation
rationalize the value	reconciliation
downplay the importance	recapitulation

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Critics of the company' s senior management will be (i)_____ by Hays' s careful and meticulous account of its actions. Despite the book' s (ii)_____ title, the author has no designs on scandal; in fact, if anything, her account tends toward (iii)_____, applauding the company' s all-conquering success without reservation.

Blank (i)

emboldened
disappointed
charmed

Blank (ii)

ominous
fawning
insipid

Blank (iii)

cynicism
pretentiousness
hagiography

Select one entry from each column.

Questions 5 and 6 are based on this passage.

The graphic elements of Mesoamerican codex writing appear as figural representations, icons, and symbols that signify thought, ideas, and imagery rather than visible speech. Although ancient Mexicans designated some symbols to voice specific words, their larger graphic system did not correspond directly with spoken language. Because the symbols did not replicate any single linguistic system, speakers of various languages could translate the pictographs into their own respective tongues. Readers evaluated a combination of naturalistic images, pictorial conventions, and abstract symbols recorded within an organized structure. By knowing the basic conventions and the meanings of the symbols and recognizing their general arrangement, readers interpreted the pictographic messages. Precise reading orders are not always set, however; thus, different readings and interpretations remain possible.

According to the passage, which of the following is true regarding the symbols of the Mesoamerican codex graphic system?

- ☐ Some of the symbols represent multiple concepts.
- ☐ Some of the symbols correspond with particular words.
- ☐ Most of the symbols originate from a single spoken language.
- ☐ The symbols were primarily made up of abstract images.
- ☐ The individual symbols were hard to translate because their arrangement varied.

Select one answer choice.

Questions 5 and 6 are based on this passage.

The graphic elements of Mesoamerican codex writing appear as figural representations, icons, and symbols that signify thought, ideas, and imagery rather than visible speech. Although ancient Mexicans designated some symbols to voice specific words, their larger graphic system did not correspond directly with spoken language. Because the symbols did not replicate any single linguistic system, speakers of various languages could translate the pictographs into their own respective tongues. Readers evaluated a combination of naturalistic images, pictorial conventions, and abstract symbols recorded within an organized structure. By knowing the basic conventions and the meanings of the symbols and recognizing their general arrangement, readers interpreted the pictographic messages. Precise reading orders are not always set, however; thus, different readings and interpretations remain possible.

Consider each of the choices separately and select all that apply.

It can be inferred from the passage that the nature of the Mesoamerican codex graphic system enabled which of the following?

- ☐ The sharing of the system among speakers of different languages
- ☐ The visible representation of different language systems
- ☐ The changing of the system's conventions by speakers of different languages

激活 Windows
转到“设置”以激活 Windows。

Questions 7 to 9 are based on this passage.

What accounts for the low-lying, flat surface of Mars' s north? On Earth' s surface, higher- and lower-lying areas have different types of crust: one, thin and dense, is pulled toward Earth' s center more strongly by gravity, and the planet' s water naturally comes to sit over it, creating oceans. The processes that generate this oceanic crust drive plate tectonics.

Is Mars' s north similarly characterized by a sort of crust different from other areas of the planet? Some researchers do see signs of tectonic activity surrounding the northern basin that suggest that it was created through the formation of new crust, like ocean basins on Earth. However, McGill points to northern bedrock structures that predate the features said to mark the start of the tectonic process. McGill instead believes that through some novel mechanism the ancient surface sank to its current depth as a single unit. This would explain why features around the basin' s edge, which would have formed as the surface dropped, seem to be younger than structures at its floor.

The third possibility is that the northern lowlands result from impacts. Some researchers suggest they formed as a series of big overlapping impact craters. Others, arguing that the odds against such a pattern of impacts are large, postulate a single event—the impact of an object bigger than any asteroid the solar system now contains.

The primary purpose of the passage is to

- ☐ explore an analogy between aspects of the geology of Mars and the geology of Earth
- ☐ describe how a certain feature of Mars' s surface formed
- ☐ point out the effect that new data has had on a scientific investigation
- ☐ summarize potential explanations of a large-scale geological feature
- ☐ present the rationale for a scientist' s theory and expose some of its weaknesses

Select one answer choice.

Questions 7 to 9 are based on this passage.

What accounts for the low-lying, flat surface of Mars' s north? On Earth' s surface, higher- and lower-lying areas have different types of crust: one, thin and dense, is pulled toward Earth' s center more strongly by gravity, and the planet' s water naturally comes to sit over it, creating oceans. The processes that generate this oceanic crust drive plate tectonics.

Is Mars' s north similarly characterized by a sort of crust different from other areas of the planet? Some researchers do see signs of tectonic activity surrounding the northern basin that suggest that it was created through the formation of new crust, like ocean basins on Earth. However, McGill points to northern bedrock structures that predate the features said to mark the start of the tectonic process. McGill instead believes that through some novel mechanism the ancient surface sank to its current depth as a single unit. This would explain why features around the basin' s edge, which would have formed as the surface dropped, seem to be younger than structures at its floor.

The third possibility is that the northern lowlands result from impacts. Some researchers suggest they formed as a series of big overlapping impact craters. Others, arguing that the odds against such a pattern of impacts are large, postulate a single event—the impact of an object bigger than any asteroid the solar system now contains.

The passage implies that McGill points to certain “northern bedrock structures” in order to

- ☐ establish the maximum and minimum bounds for the age of the northern basin of Mars
- ☐ contrast the geological characteristics of the northern basin with the characteristics of the terrain at its rim
- ☐ question the role of impacts in the formation of Mars' s surface features
- ☐ dispute the idea that the northern basin of Mars was formed by the creation of new crust
- ☐ argue that their elevation now must be lower than it was at the time the structures formed

Select one answer choice.

Questions 7 to 9 are based on this passage.

What accounts for the low-lying, flat surface of Mars' s north? On Earth' s surface, higher- and lower-lying areas have different types of crust: one, thin and dense, is pulled toward Earth' s center more strongly by gravity, and the planet' s water naturally comes to sit over it, creating oceans. The processes that generate this oceanic crust drive plate tectonics.

Is Mars' s north similarly characterized by a sort of crust different from other areas of the planet? Some researchers do see signs of tectonic activity surrounding the northern basin that suggest that it was created through the formation of new crust, like ocean basins on Earth. However, McGill points to northern bedrock structures that predate the features said to mark the start of the tectonic process. McGill instead believes that through some novel mechanism the ancient surface sank to its current depth as a single unit. This would explain why features around the basin' s edge, which would have formed as the surface dropped, seem to be younger than structures at its floor.

The third possibility is that the northern lowlands result from impacts. Some researchers suggest they formed as a series of big overlapping impact craters. Others, arguing that the odds against such a pattern of impacts are large, postulate a single event—the impact of an object bigger than any asteroid the solar system now contains.

As presented in the passage, McGill' s account of the formation of Mars' s northern basin differs from the others mentioned in that it alone

- ☐ explains the formation of certain northern bedrock features
- ☐ does not specify the force that caused the northern basin to be lower than its surroundings
- ☐ takes the northern basin to be a landform that is not analogous to any found on Earth
- ☐ denies that features around the northern basin are the result of tectonic activity
- ☐ attributes the creation of the northern lowlands to processes occurring within the planet

Smil' s analysis of climate change is even more _____ than that supplied by most well-informed writers, and thus deserves serious consideration.

- ☒ nuanced
- ☐ unoriginal
- ☒ complex
- ☐ derivative
- ☐ partisan
- ☐ compelling

Select two answer choices.

Question 13 is based on this passage.

A plant-based automobile fuel has just become available in Ternland. A car can be driven as far on a gallon of the new plant-based fuel as a car can be driven on a gallon of gasoline, but a gallon of the plant-based fuel both costs less and results in less pollution. Therefore, drivers in Ternland who switch to it will reduce the amount they spend on fuel in a year while causing less environmental damage.

Which of the following is an assumption on which the argument relies?

- ☐ There is no expense associated with operating an automobile that is higher when the automobile uses the plant-based fuel than when it uses gasoline.
- ☐ Automobiles that have been operated using the plant-based fuel can no longer be operated using regular gasoline.
- ☐ The environmental damage attributable to automobiles is due almost entirely to the production and combustion of fuel automobiles use.
- ☐ The advantages of the plant-based fuel over gasoline will not lead those who switch to the plant-based fuel to do more driving.
- ☐ Most drivers in Ternland will switch from gasoline to the plant-based fuel.

Select one answer choice.

Questions 14 and 15 are based on this passage.

An Irish newspaper editorial encouraging women to participate in the nonimportation movement launched in Ireland in 1779 appears consistent with a perception that the political use of the consumer boycott originated in North America and spread eastwards across the Atlantic to Ireland. This is a view that most historians have concurred with. For example, T. H. Breen argued that the consumer boycott was a "brilliantly original American invention." Breen did acknowledge that "a few isolated boycotts may have taken place in other countries." However, Mary O' Dowd argues that from the late seventeenth century, Irish political discourse advocated for the nonconsumption of imported goods and support for home manufactures by women in ways that were strikingly similar to those used later in North America.

The passage is primarily concerned with

- ☐ resolving a dispute
- ☐ advocating a course of action
- ☐ tracing the evolution of a practice
- ☐ citing competing views of an issue
- ☐ chronicling a series of events

Select one answer choice.

Questions 14 and 15 are based on this passage.

An Irish newspaper editorial encouraging women to participate in the nonimportation movement launched in Ireland in 1779 appears consistent with a perception that the political use of the consumer boycott originated in North America and spread eastwards across the Atlantic to Ireland. This is a view that most historians have concurred with. For example, T. H. Breen argued that the consumer boycott was a “brilliantly original American invention.” Breen did acknowledge that “a few isolated boycotts may have taken place in other countries.” However, Mary O’ Dowd argues that from the late seventeenth century, Irish political discourse advocated for the nonconsumption of imported goods and support for home manufactures by women in ways that were strikingly similar to those used later in North America.

It can be inferred from the passage that Breen and O’ Dowd would most likely disagree about

- ☐ the effectiveness of the nonimportation movement
- ☐ the accuracy of the perception encouraged by the Irish newspaper mentioned in the first sentence
- ☐ how similar the economies of Ireland and North America were in 1779
- ☐ whether or not women were politically active in Ireland in 1779
- ☐ the impact that nonconsumption of imported goods had on home manufacturing

Select one answer choice.

$$x > 0$$

Quantity A

$$x^{11}$$

Quantity B

$$x^9$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

a , b , and c are positive numbers such that $a = \frac{1}{10}b$ and $b = \frac{1}{100}c$.

Quantity A

$$1,000a + b$$

Quantity B

$$10b + c$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

Thirty percent of the members of Club A are also members of Club B . Forty percent of the members of Club B are also members of Club A .

Quantity A

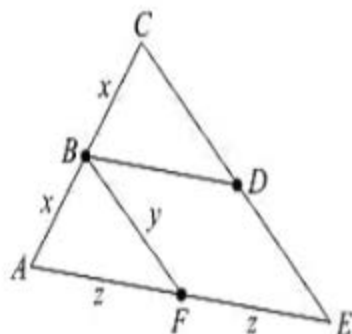

The total number of members of Club
 A

Quantity B

The total number of members of Club
 B

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

In triangle ACE , point D is the midpoint of side CE .

Quantity A

The sum of the perimeters of triangles ABF and BCD

Quantity B

The perimeter of triangle ACE

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The volume of a rectangular solid is 60, and the area of one of its faces is 11.

Quantity A

The surface area of the solid

Quantity B

100

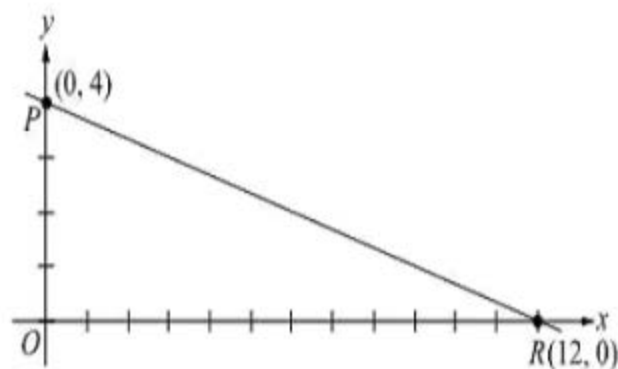

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

If a shirt company reduced its stock of shirts 40 percent to 60,000 dozen shirts, what was the number of shirts in stock before the reduction?

- ☐ 1,800,000
- ☐ 1,200,000
- ☐ 360,000
- ☐ 240,000
- ☐ 100,000

Select one answer choice.

In the rectangular coordinate system shown, how many points on line segment PR have coordinates (x, y) , such that both x and y are integers?

- ☐ Four
- ☐ Five
- ☐ Six
- ☐ Seven
- ☐ Eight

Select one answer choice.

$x, 6, 14, 10, 11$

In the list shown, x is an integer less than or equal to 6. If the range of the numbers in the list is greater than the median, what is the greatest possible value of x ?

- ☐ 5 ☐ 4 ☐ 3 ☐ -3 ☐ -4

Select one answer choice.

How many values of x are there such that x is an integer and $|3x - 2| < 8$?

- ☐ One
- ☐ Two
- ☐ Three
- ☐ Four
- ☐ Five

Select one answer choice.

Method of Transportation	Percent of Workers	
	2000	2010
Private vehicle	85.9%	88.0%
Public transportation	6.2%	5.1%
Walk	5.6%	3.9%
None (work at home)	2.3%	3.0%

The table above shows four categories of methods of transportation to work, including the category None for people who work at home. For each category and for the years 2000 and 2010, the table shows the percent of workers in a certain city who used that method most of the time during the year. Based on the information given, which of the following statements must be true?

Indicate all such statements.

- ☐ In 2010 the ratio of the number of workers in the private vehicle category to the number of workers who were not in that category was 22 to 3.
- ☐ The number of workers in the public transportation category in 2010 was less than that in 2000.
- ☐ The number of workers in the category None in 2010 was greater than that in 2000.

Select one or more answer choices.

An artist will arrange 5 identical plastic apples in 3 wooden bowls—one made of maple, one of oak, and one of pine. How many different arrangements are possible such that each bowl will contain at least one apple?

- ☐ 6
- ☐ 9
- ☐ 10
- ☐ 15
- ☐ 60

Select one answer choice.

Which of the following values of x satisfies the equation $\frac{x}{2} = n!$ for some positive integer n ?

- ☐ 160
- ☐ 360
- ☐ 580
- ☐ 720
- ☐ 1,440

Select one answer choice.

Machines A , B , and C produce widgets at their respective constant rates. Machine A produces n widgets in x hours, machine B produces n widgets in $2x$ hours, and machine C produces n widgets in $3x$ hours. In terms of x , how many hours does it take the three machines, working simultaneously at their respective constant rates, to produce n widgets?

- ☐ $\frac{1}{11}x$ ☐ $\frac{1}{6}x$ ☐ $\frac{6}{11}x$ ☐ $\frac{11}{6}x$ ☐ $2x$

Select one answer choice.

Last year the value of one share of a stock increased by 10 percent during the first half of the year, and the value of one share of the stock increased by 50 percent during the entire year. What was the percent increase in the value of one share of the stock during the second half of the year?

Give your answer to the nearest whole percent.

 %

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

x	5	3	1	-1
$f(x)$	-7	-3	1	5

The table above shows the values of $f(x)$ for selected values of x , where $f(x)$ is a linear function. What is the value of $f(-10)$?

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.
