Questions 6 to 8 are based on the following data.

Trade Between China and the United States in 2002

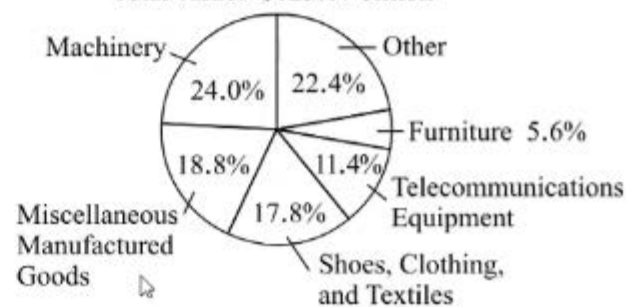

Exports from the United States to China

Total value: \$22.05 billion

Exports from China to the United States

Total value: \$125.17 billion

For exports from the United States to China, which of the categories had a value that was closest to $\frac{1}{14}$ of the total value of all such exports?

- ☐ Machinery
 ☐ Transportation Equipment
 ☐ Chemicals
 ☐ Animal and Plant Products
 ☐ Telecommunications Equipment

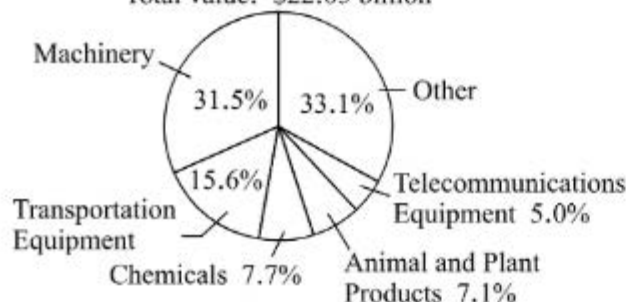

Select one answer choice.

Questions 6 to 8 are based on the following data.

Trade Between China and the United States in 2002

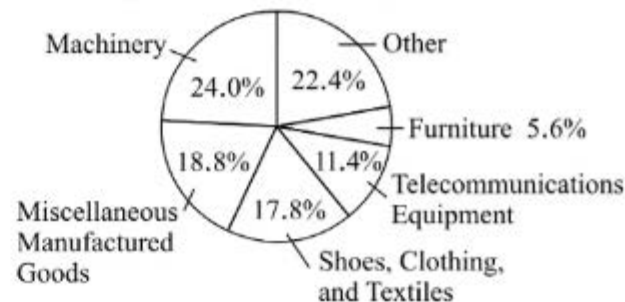

Exports from the United States to China

Total value: \$22.05 billion

Exports from China to the United States

Total value: \$125.17 billion

What was the value of transportation equipment exported from the United States to China, in billions of dollars?

Give your answer to the nearest tenth of a billion dollars.

\$ billion

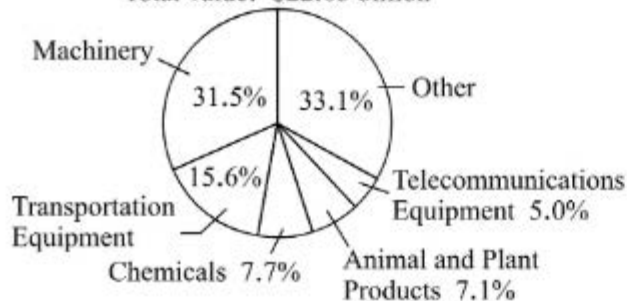

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

Questions 6 to 8 are based on the following data.

Trade Between China and the United States in 2002

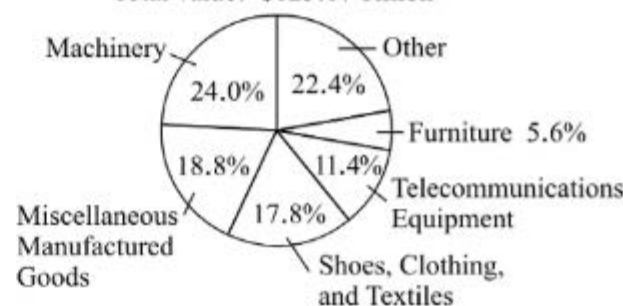

Exports from the United States to China

Total value: \$22.05 billion

Exports from China to the United States

Total value: \$125.17 billion

The value of miscellaneous manufactured goods exported from China to the United States was approximately what percent greater than the value of telecommunications equipment exported from China to the United States?

- ☐ 40%
 ☐ 45%
 ☐ 55%
 ☐ 60%
 ☐ 65%

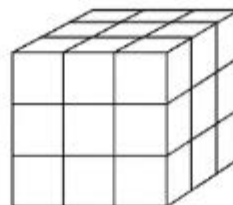

Select one answer choice.

A robot processes orders in a warehouse, where the least and greatest possible processing times per order are 2 minutes and 5 minutes, respectively. Based on these times, which of the following could be the number of orders processed during a time period that is between 110 minutes and 130 minutes in length?

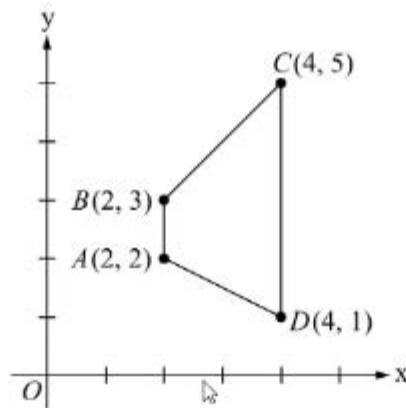

Indicate all such numbers.

- ☐ 20
- ☐ 40
- ☐ 60
- ☐ 80
- ☐ 100

A large cube is to be formed by placing together 27 identical white cubes as shown. The large cube will then be placed on a floor, and the 5 exposed faces will be painted black. How many of the original 27 cubes will have exactly 2 black faces?

- ☐ 8
- ☐ 9
- ☐ 12
- ☐ 16
- ☐ 18

In the xy -plane, what is the area of the quadrilateral region $ABCD$?

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

If $|a| = b - c$ and $c = a + b$, where a , b , and c are nonzero numbers, which of the following numbers must be negative?

- ☒ a only
- ☐ b only
- ☐ c only
- ☐ a and c
- ☐ b and c

redundantly detailed
off-puttingly genteel

trivial
deliberate
eloquent

Select one entry from each column.

Questions 4 and 5 are based on this passage.

Native Americans' Traditional Ecological Knowledge (or TEK) can reveal connections between species unrecognized by non-Native ecologists. For example, in Western scientific literature, the relationship between foraging marine mammals and gulls was usually assumed to be competition, or at best commensalism (an association between two organisms or species in which one benefits and the other derives neither benefit nor harm). Drawing on TEK, however, Pierotti and Wildcat found that sea lions, dolphins, and whales use conspicuous gulls to locate rich concentrations of patchily distributed fish and squid. The mammals' foraging activities then serve to concentrate the prey at the ocean's surface, where it is much more accessible to gulls. As a result of their cooperation, both groups experience greater feeding success.

The passage suggests that Pierotti and Wildcat departed from "Western scientific literature" in which of the following ways?

- ☐ They argued that hierarchical relationships prevail among mixed-species animal groups that foraged together.
- ☐ They recognized that marine mammals and gulls were vying for limited food resources.
- ☐ They were receptive to the idea that mixed-species animal groups might derive mutual benefit from foraging together.
- ☐ They disregarded the competitive aspects of the relationship between marine mammals and fish and squid.
- ☐ They challenged the assumption that marine mammals and gulls profit equally from foraging cooperatively.

Select one answer choice.

Questions 4 and 5 are based on this passage.

Native Americans' Traditional Ecological Knowledge (or TEK) can reveal connections between species unrecognized by non-Native ecologists. For example, in Western scientific literature, the relationship between foraging marine mammals and gulls was usually assumed to be competition, or at best commensalism (an association between two organisms or species in which one benefits and the other derives neither benefit nor harm). Drawing on TEK, however, Pierotti and Wildcat found that sea lions, dolphins, and whales use conspicuous gulls to locate rich concentrations of patchily distributed fish and squid. The mammals' foraging activities then serve to concentrate the prey at the ocean's surface, where it is much more accessible to gulls. As a result of their cooperation, both groups experience greater feeding success.

It can be inferred from the passage that "fish and squid" are

- ☐ less appealing to foraging gulls than they are to marine mammals
- ☐ less readily detected by certain marine mammals than by foraging gulls
- ☐ more richly concentrated in areas where marine mammals are present
- ☐ more likely to feed at the ocean's surface than are most marine mammals
- ☐ more important as a food source for marine mammals than they are for gulls

It is troubling that blogs, which may be among the least reliable sources of information in human history, occupy such _____ positions in Internet search engine results.

- ☐ enviable
- ☐ conspicuous
- ☐ suspect
- ☐ dubious
- ☐ controversial
- ☐ prominent

Select two answer choices.

Questions 10 to 12 are based on this passage.

Among many historians a belief persists that Cotton Mather's biographies of some of the settlers of the Massachusetts Bay Colony (published 1702) are exercises in hagiography, endowing their subjects with saintly piety at the expense of historical accuracy. Yet modern studies have profited both from the breadth of information that Mather provides—in, for example, his discussions of colonial medicine—and from his critical observations of such leading figures as Governor John Winthrop. Mather's wry humor—as demonstrated by his detailed descriptions of events such as Winthrop's efforts to prevent wood-stealing—is overlooked by those charging Mather with presenting his subjects as extremely pious. The charge also obscures Mather's concern with the settlers' material, not just spiritual, prosperity. Further, this pejorative view underrates the biographies' value as chronicles: Mather amassed all sorts of published and unpublished documents as sources, and his selection of key events shows a marked sensitivity to the nature of the colony's development.

It can be inferred from the passage that many historians believe that Mather's biographies primarily

- ☐ disclose important historical data from the settlers' private diaries
- ☐ glorify the early colonists of the Massachusetts Bay Colony
- ☐ provide a fuller picture of the multifaceted characters of such historical figures as John Winthrop
- ☐ indicate the salutary effects of the settlers' religious practices on colonial life
- ☐ reveal that the settlers considered their lives to be similar to those of the saints

Select one answer choice.

Questions 10 to 12 are based on this passage.

Among many historians a belief persists that Cotton Mather's biographies of some of the settlers of the Massachusetts Bay Colony (published 1702) are exercises in hagiography, endowing their subjects with saintly piety at the expense of historical accuracy. Yet modern studies have profited both from the breadth of information that Mather provides—in, for example, his discussions of colonial medicine—and from his critical observations of such leading figures as Governor John Winthrop. Mather's wry humor—as demonstrated by his detailed descriptions of events such as Winthrop's efforts to prevent wood-stealing—is overlooked by those charging Mather with presenting his subjects as extremely pious. The charge also obscures Mather's concern with the settlers' material, not just spiritual, prosperity. Further, this pejorative view underrates the biographies' value as chronicles: Mather amassed all sorts of published and unpublished documents as sources, and his selection of key events shows a marked sensitivity to the nature of the colony's development.

The author of the passage implies that an argument for the historical accuracy of Mather's works is most strongly supported by which of the following?

- ☐ Surviving documents that corroborate Mather's detailed descriptions of his subjects
- ☐ Mather's firsthand personal acquaintance with those about whom he wrote
- ☐ Mather's frank and straightforward accounts of the lives and times of people about whom he had conducted extensive research
- ☐ Mather's ability to detail important historical events in the religious context of which they were a part
- ☐ The quantity and nature of the sources from which Mather obtained his information

Select one answer choice.

Questions 10 to 12 are based on this passage.

Among many historians a belief persists that Cotton Mather's biographies of some of the settlers of the Massachusetts Bay Colony (published 1702) are exercises in hagiography, endowing their subjects with saintly piety at the expense of historical accuracy. Yet modern studies have profited both from the breadth of information that Mather provides—in, for example, his discussions of colonial medicine—and from his critical observations of such leading figures as Governor John Winthrop. Mather's wry humor—as demonstrated by his detailed descriptions of events such as Winthrop's efforts to prevent wood-stealing—is overlooked by those charging Mather with presenting his subjects as extremely pious. The charge also obscures Mather's concern with the settlers' material, not just spiritual, prosperity. Further, this pejorative view underrates the biographies' value as chronicles: Mather amassed all sorts of published and unpublished documents as sources, and his selection of key events shows a marked sensitivity to the nature of the colony's development.

Information in the passage best supports which of the following statements about Mather's biographies of the settlers of the Massachusetts Bay Colony?

- ☐ Annals written by Mather and others were censored by later historians, thus detracting from their value as full and accurate accounts of the period.
- ☐ Mather's description of Governor Winthrop includes all of Winthrop's shortcomings, such as a tendency toward levity at inappropriate times.
- ☐ Mather's descriptions of the Massachusetts Bay colonists were based primarily on firsthand experiences.
- ☐ Many historians believe that Mather's biographies are poor sources of historical information because biography is an inherently unreliable genre of historical writing.
- ☐ Mather's writings reflect an interest in the degree of economic success achieved by early Massachusetts Bay colonists.

Questions 5 and 6 are based on this passage.

The operational complexity (number of steps and decisions made during a process) of Acheulean tool production technologies emerging around 1.8 million years ago far exceeds that of the earlier Oldowan artifacts and suggests to some researchers a significant increase in toolmakers' cognitive capacity. However, we should not assume that a more sophisticated production technology will always be more complex: it is possible that better planning or problem solving leads to simpler, more efficient solutions rather than to more complex ones. For instance, late Acheulean flake tools known as the Kombewa type were made by removing large sharp flakes from a boulder core. Such tools are an elegant but simple solution to the problem of producing a cleaver-like tool without the thousands of steps involved in making a typical Acheulean hand axe.

Which of the following can be inferred about the "Oldowan artifacts" mentioned in the passage?

- ☐ They were most likely in use for a shorter period of time than were Kombewa flake tools.
- ☐ They are identical in appearance to Acheulean stone tools but were made by a different method.
- ☐ Their construction required fewer decisions than did the construction of Acheulean hand axes.
- ☐ They were too crudely designed to be of use in the more sophisticated operations of the Acheulean period.
- ☐ Their intended purposes are more difficult to determine than are the purposes of Kombewa flake tools.

Select one answer choice.

Questions 5 and 6 are based on this passage.

The operational complexity (number of steps and decisions made during a process) of Acheulean tool production technologies emerging around 1.8 million years ago far exceeds that of the earlier Oldowan artifacts and suggests to some researchers a significant increase in toolmakers' cognitive capacity. However, we should not assume that a more sophisticated production technology will always be more complex: it is possible that better planning or problem solving leads to simpler, more efficient solutions rather than to more complex ones. For instance, late Acheulean **flake tools** known as the Kombewa type were made by removing large sharp flakes from a boulder core. Such tools are an elegant but simple solution to the problem of producing a cleaver-like tool without the thousands of steps involved in making a typical Acheulean hand axe.

The author mentions Kombewa "flake tools" most likely in order to argue that

- ☐ the production of cleaver-like tools required more careful planning than did the production of other kinds of tools
- ☐ Oldowan artifacts were much more sophisticated than previously thought
- ☐ reducing the operational complexity of tool production methods tends to increase the utility of the tools produced
- ☐ Acheulean and Oldowan toolmakers may not have been as cognitively different as some believe
- ☐ tool production technology did not change much throughout the Acheulean period

Select one answer choice.

Questions 7 to 9 are based on this passage.

For the past twenty years, most interpretations of Native American literature have focused on either theories, texts, or territories. Theories of reading, such as postcolonialism, postmodernism, the oral tradition, and cultural recovery, have served as major modes of inquiry for both Native American and non-Native American critics who try to make sense of Native American literary texts. Other scholars put the texts themselves in the foreground. In the case of Native American literature, text-based approaches accentuate the work of writers such as Silko, Momaday, and Ortiz over a particular theory or idea. A third group of scholars root their analysis of texts, whether they be myths, songs, poems, or prose, in the land that is fundamental to the works under consideration. Rather than focusing on a theory or a writer, a critic engaged in a territory-based reading focuses on the healing or recuperative or symbolic properties of culturally specific geographical locations. None of these strategies is any more important than another, and it is impossible to conceive of Native American literary criticism without each, as all three contribute to understanding the complexity of Native American discourses.

The primary purpose of the passage is to

- ☐ propose a new way of understanding a particular literary tradition
- ☐ advocate a synthesis of various approaches to the study of a particular literary tradition
- ☐ identify leading strategies used to interpret a particular literary tradition
- ☐ discuss important methodological similarities among various interpretive approaches to a particular literary tradition
- ☐ distinguish between opposing critical approaches to a particular literary tradition

Select one answer choice.

Questions 7 to 9 are based on this passage.

For the past twenty years, most interpretations of Native American literature have focused on either theories, texts, or territories. Theories of reading, such as postcolonialism, postmodernism, the oral tradition, and cultural recovery, have served as major modes of inquiry for both Native American and non-Native American critics who try to make sense of Native American literary texts. Other scholars put the texts themselves in the foreground. In the case of Native American literature, text-based approaches accentuate the work of writers such as Silko, Momaday, and Ortiz over a particular theory or idea. A third group of scholars root their analysis of texts, whether they be myths, songs, poems, or prose, in the land that is fundamental to the works under consideration. Rather than focusing on a theory or a writer, a critic engaged in a territory-based reading focuses on the healing or recuperative or symbolic properties of culturally specific geographical locations. None of these strategies is any more important than another, and it is impossible to conceive of Native American literary criticism without each, as all three contribute to understanding the complexity of Native American discourses.

The passage suggests that a theory-based approach to Native American literature and a territory-based approach have which of the following characteristics in common?

- ☐ Neither is exclusively concerned with the text itself.
- ☐ Neither is well suited to writers such as Silko, Momaday, or Ortiz.
- ☐ Both focus primarily on the act of reading.
- ☐ Both are strategies that work better with some literary genres than with others.
- ☐ Both have recently gained in popularity at the expense of text-based approaches.

Select one answer choice.

Questions 7 to 9 are based on this passage.

For the past twenty years, most interpretations of Native American literature have focused on either theories, texts, or territories. Theories of reading, such as postcolonialism, postmodernism, the oral tradition, and cultural recovery, have served as major modes of inquiry for both Native American and non-Native American critics who try to make sense of Native American literary texts. Other scholars put the texts themselves in the foreground. In the case of Native American literature, text-based approaches accentuate the work of writers such as Silko, Momaday, and Ortiz over a particular theory or idea. A third group of scholars root their analysis of texts, whether they be myths, songs, poems, or prose, in the land that is fundamental to the works under consideration. Rather than focusing on a theory or a writer, a critic engaged in a territory-based reading focuses on the healing or recuperative or symbolic properties of culturally specific geographical locations. None of these strategies is any more important than another, and it is impossible to conceive of Native American literary criticism without each, as all three contribute to understanding the complexity of Native American discourses.

The author of the passage mentions postcolonialism, postmodernism, the oral tradition, and cultural recovery primarily in order to

- ☐ identify certain theories of reading that the author believes are more sophisticated than others
- ☐ identify certain interpretive strategies that are most effective when used in conjunction with other strategies
- ☐ identify the modes of inquiry that have been used most successfully by both Native American and non-Native American critics of Native American literature
- ☐ provide examples of theoretical approaches that are incompatible with more text-based approaches
- ☐ provide examples of one of three major types of interpretive strategies that are applied to Native American literature

Question 13 is based on this passage.

Certain nonantibiotic medications are ineffective when antibiotics are taken along with them. CYP3A4, an enzyme produced by the liver, has been found to inactivate these same nonantibiotic medications when it is present in the body in higher-than-normal levels. CYP3A4, however, is chemically quite dissimilar from any antibiotic in current use.

The statements given, if true, best support which of the following as a hypothesis?

- ☐ CYP3A4, when present in the body in higher-than-normal levels, reduces the effectiveness of at least some antibiotics.
- ☐ CYP3A4 inactivates certain toxins and prevents them from being absorbed into body tissues.
- ☐ When taken in combination with other medications, antibiotics reduce the level of CYP3A4 in the body.
- ☐ Antibiotics boost the liver's production of the enzyme CYP3A4.
- ☐ Medications used to treat liver disorders are likely to be the ones whose effectiveness is most seriously compromised when patients take them in combination with antibiotics.

Select one answer choice.

Questions 14 and 15 are based on this passage.

Why does so much of our coal and petroleum date from the Carboniferous period? The orthodox view is that Carboniferous swamps provided optimal conditions for fossil fuel formation. After the Carboniferous, the world became drier, and conditions became less favorable. But is that all there is to it? Forests didn't disappear after the Carboniferous. If anything, there were even more trees, growing ever more widely at higher elevations, and growing to greater heights over the Mesozoic and Cenozoic. After the Carboniferous, the continents may have been drier inland, but they still had lots of streams, rivers, and coastal wetlands. Trees from dry highlands could easily have washed into rivers and accumulated in lowland marshes. Something other than a change in climate must have occurred.

In the passage, the author is questioning the prevailing view regarding

- ☐ how coal and petroleum form
- ☐ where most of Earth's coal and petroleum formed
- ☐ what the optimal conditions for fossil fuel formation are
- ☐ the reason that coal and petroleum formed when they did
- ☐ how much coal and petroleum formed during the Carboniferous period

Select one answer choice.

Questions 14 and 15 are based on this passage.

Why does so much of our coal and petroleum date from the Carboniferous period? The orthodox view is that Carboniferous swamps provided optimal conditions for fossil fuel formation. After the Carboniferous, the world became drier, and conditions became less favorable. But is that all there is to it? Forests didn't disappear after the Carboniferous. If anything, there were even more trees, growing ever more widely at higher elevations, and growing to greater heights over the Mesozoic and Cenozoic. After the Carboniferous, the continents may have been drier inland, but they still had lots of streams, rivers, and coastal wetlands. Trees from dry highlands could easily have washed into rivers and accumulated in lowland marshes. Something other than a change in climate must have occurred.

Consider each of the choices separately and select all that apply.

The author would probably agree with which of the following statements about climatic conditions in the Carboniferous period?

- ☐ There appears to be less continuity than has been thought between the climatic conditions that prevailed during the Carboniferous period and those that followed.
- ☐ Climatic conditions alone do not explain the extent of fossil fuel formation in the Carboniferous.
- ☐ The climatic conditions that prevailed during the Carboniferous were somewhat less conducive to fossil fuel formation than scientists tend to think.
