Questions 4 and 5 are based on this passage.

While export prices remained robust, British India's Tea Cess Committee (TCC) made only sporadic, small-scale attempts to create demand for tea in India by giving away pre-brewed cups in selected locations and selling small packets of leaf fragments. Still, by 1930 only a fraction of the Indian population had tasted tea, and more than 90 percent of the crop was exported. The Great Depression decisively changed the picture, however. International tea prices plunged, and by 1935 growers faced an unsold surplus of more than a hundred million pounds. The prospect of a huge "uninitiated" market suddenly seemed appealing, and the TCC, reorganized as the Indian Tea Market Expansion Board (ITMEB) and provided with an expanded budget, began the largest marketing campaign in Indian history.

The passage suggests that "small packets of leaf fragments" were

- ☐ preferred by Indian consumers over other forms of tea
- ☐ too valuable to be sold in large packets to consumers
- ☐ marketed in response to a local surplus of unsold tea leaves
- ☐ likely to sell for high prices if exported
- ☐ an ineffective way to expand the local tea market

Select one answer choice.

Questions 4 and 5 are based on this passage.

While export prices remained robust, British India's Tea Cess Committee (TCC) made only sporadic, small-scale attempts to create demand for tea in India by giving away pre-brewed cups in selected locations and selling small packets of leaf fragments. Still, by 1930 only a fraction of the Indian population had tasted tea, and more than 90 percent of the crop was exported. The Great Depression decisively changed the picture, however. International tea prices plunged, and by 1935 growers faced an unsold surplus of more than a hundred million pounds. The prospect of a huge "uninitiated" market suddenly seemed appealing, and the TCC, reorganized as the Indian Tea Market Expansion Board (ITMEB) and provided with an expanded budget, began the largest marketing campaign in Indian history.

Consider each of the choices separately and select all that apply.

According to the passage, the Great Depression had which of the following effects on the Indian tea trade?

- ☐ A large proportion of harvested tea was ultimately wasted.
- ☐ The TCC was motivated to seek new potential tea buyers.
- ☐ Prices for tea sold internationally declined.

Smil' s analysis of climate change is even more _____ than that supplied by most well-informed writers, and thus deserves serious consideration.

- ☐ nuanced
- ☐ unoriginal
- ☐ complex
- ☐ derivative
- ☐ partisan
- ☐ compelling

Select two answer choices.

Questions 10 to 12 are based on this passage.

MacArthur and Wilson suggested that the biodiversity of an island will vary in direct proportion to a function of the island's size (i.e., larger islands can support a greater number of species) and in inverse proportion to a function of its distance from the mainland (i.e., more remote islands will tend to support fewer species). Reduced biodiversity in an island context is likely to require significant adaptation on the part of colonizing human populations. Evans argues that this limitation makes islands ideal laboratories for the study of human adaptations to the natural environment, whilst Renfrew and Wagstaff, in the introduction to their study of Melos, focus on this limitation in biodiversity as a "significant characteristic of the island ecosystem." For human communities, however, this limitation may potentially be offset by other factors. The reduced biodiversity of an island ecosystem applies only to terrestrial resources: the resources of the sea will be as rich as on any other coastal area, and may be equally important to human communities. A small island such as Malta or Melos allows all communities direct access to the sea, providing an important nutritional "safety net," as well as an element of dietary diversity, which may actually give island communities an advantage over their landlocked counterparts. Islands may also have specific nonbiological resources (such as obsidian on Melos), which may be used in exchange with communities on other islands and adjacent mainlands.

Which of the following would NOT be consistent with MacArthur and Wilson's theory as presented in the passage?

- ☐ A large island close to the mainland supporting many more terrestrial species than a smaller island nearby supports
- ☐ A small, remote island supporting very few terrestrial species
- ☐ A large island supporting fewer terrestrial species than a nearby coastal area of the mainland supports
- ☐ A small island far from the mainland supporting more terrestrial species than a large island close to the mainland supports
- ☐ A small island supporting fewer terrestrial species than a large island slightly further from the mainland supports

Select one answer choice.

Questions 10 to 12 are based on this passage.

MacArthur and Wilson suggested that the biodiversity of an island will vary in direct proportion to a function of the island's size (i.e., larger islands can support a greater number of species) and in inverse proportion to a function of its distance from the mainland (i.e., more remote islands will tend to support fewer species). Reduced biodiversity in an island context is likely to require significant adaptation on the part of colonizing human populations. Evans argues that this limitation makes islands ideal laboratories for the study of human adaptations to the natural environment, whilst Renfrew and Wagstaff, in the introduction to their study of Melos, focus on this limitation in biodiversity as a "significant characteristic of the island ecosystem." For human communities, however, this limitation may potentially be offset by other factors. The reduced biodiversity of an island ecosystem applies only to terrestrial resources: the resources of the sea will be as rich as on any other coastal area, and may be equally important to human communities. A small island such as Malta or Melos allows all communities direct access to the sea, providing an important nutritional "safety net," as well as an element of dietary diversity, which may actually give island communities an advantage over their landlocked counterparts. Islands may also have specific nonbiological resources (such as obsidian on Melos), which may be used in exchange with communities on other islands and adjacent mainlands.

The passage implies which of the following about the biodiversity of terrestrial species on islands?

- ☐ It may be negatively affected by colonizing human populations.
- ☐ It tends to be much richer for most small islands than Renfrew and Wagstaff imply.
- ☐ It generally has little to do with the size or remoteness of an island.
- ☐ It often fluctuates in ways that MacArthur and Wilson failed to predict.
- ☐ It is not necessarily indicative of the biodiversity of marine species nearby.

Select one answer choice.

Questions 10 to 12 are based on this passage.

MacArthur and Wilson suggested that the biodiversity of an island will vary in direct proportion to a function of the island's size (i.e., larger islands can support a greater number of species) and in inverse proportion to a function of its distance from the mainland (i.e., more remote islands will tend to support fewer species). Reduced biodiversity in an island context is likely to require significant adaptation on the part of colonizing human populations. Evans argues that this limitation makes islands ideal laboratories for the study of human adaptations to the natural environment, whilst Renfrew and Wagstaff, in the introduction to their study of Melos, focus on this limitation in biodiversity as a "significant characteristic of the island ecosystem." For human communities, however, this limitation may potentially be offset by other factors. The reduced biodiversity of an island ecosystem applies only to terrestrial resources: the resources of the sea will be as rich as on any other coastal area, and may be equally important to human communities. A small island such as Malta or Melos allows all communities direct access to the sea, providing an important nutritional "safety net," as well as an element of dietary diversity, which may actually give island communities an advantage over their landlocked counterparts. Islands may also have specific nonbiological resources (such as obsidian on Melos), which may be used in exchange with communities on other islands and adjacent mainlands.

The author implies which of the following about large islands?

- ☐ The large size of some islands may make it difficult for some inhabitants to exploit the sea's resources.
- ☐ It is unlikely that large islands will have more biodiversity overall than will small islands.
- ☐ For most large islands, size will outweigh distance from the mainland as a factor in biodiversity.
- ☐ Large islands will probably have less marine biodiversity than small islands will have.
- ☐ Large islands will have many more types of non-biological resources than will small islands.

Select one answer choice.

The median of the five numbers 50, 52, 52, 49, and x is 50.

Quantity A

Quantity B

The greatest possible value of x

50

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$x^3 - x^2 - 2x = 0$$

Quantity A

x

Quantity B

0

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.

- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

x copies of a certain news magazine cost a total of \$50.

y copies of a certain art magazine cost a total of \$80.

Quantity A

The ratio of the cost of 1 copy of the news magazine to the cost of 1 copy of the art magazine

Quantity B

$$\frac{5}{8}$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

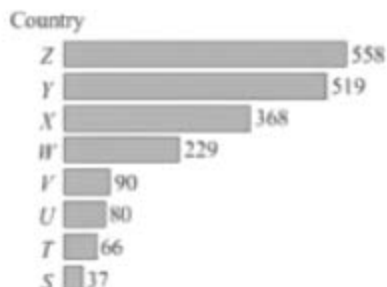

In the xy -plane, what is the equation of the line that contains the point $(0, 0)$ and is parallel to the line $y = 5x + 1$?

- ☐ $y = \frac{1}{5}x$
- ☐ $y = x + 1$
- ☐ $y = x + 5$
- ☐ $y = 5x$
- ☐ $y = 5x + 2$

Questions 6 to 8 are based on the following data.

Number of Prisoners per 100,000 People in Selected Countries

The number of prisoners is approximately what percent of the total population of Country *W*?

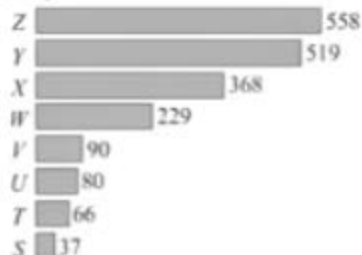

- ☐ 0.003%
- ☐ 0.2%
- ☐ 0.3%
- ☐ 2%
- ☐ 3%

Select one answer choice.

Questions 6 to 8 are based on the following data.

Number of Prisoners per 100,000 People in Selected Countries

Country

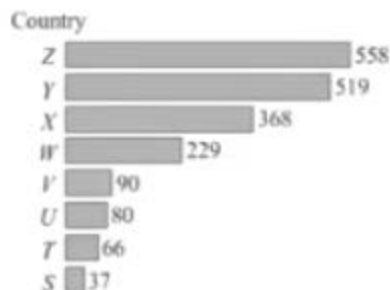

Country X has approximately how many more prisoners per 1,000 people than does Country V ?

- ☐ 0.3
- ☐ 2.8
- ☐ 4.1
- ☐ 28
- ☐ 41

Select one answer choice.

Questions 6 to 8 are based on the following data.

Number of Prisoners per 100,000 People in Selected Countries

If the population of Country *Y* is 250 million, then approximately how many prisoners does Country *Y* have?

- ☐ 125,000
- ☐ 130,000
- ☐ 250,000
- ☐ 1,250,000
- ☐ 1,300,000

Select one answer choice.

If a two-digit number that has x as the tens' digit and y as the units' digit is multiplied by 5, then the value of the product is

- ☐ $5xy$
- ☐ $5x + 5y$
- ☐ $5x + 50y$
- ☐ $50x + 5y$
- ☐ $50x + 50y$

Select one answer choice.

The width of a rectangular playground is 75 percent of the length. If the perimeter of the playground is 280 meters, how long, in meters, is a straight path that cuts diagonally across the playground from one corner to another?

- ☐ 80
- ☐ 85
- ☐ 90
- ☐ 95
- ☐ 100

A child-care center has a supply of bicycles, each with 2 wheels, and tricycles, each with 3 wheels, for the children to use. The number of bicycles in the supply is odd, and the total number of wheels on all the bicycles and tricycles is 31. Which of the following could be the total number of bicycles and tricycles in the supply?

Indicate all such numbers.

- ☐ 11
- ☐ 12
- ☐ 13
- ☐ 14
- ☐ 15

A wall in a museum is covered by 60 flat rectangular panels. If the dimensions of each panel are 4 feet by 7.5 feet, what is the total area, in square yards, of the panels? (Note: 1 yard = 3 feet.)

- ☐ 200
- ☐ 600
- ☐ 1,800
- ☐ 5,400
- ☐ 16,200

Select one answer choice.

Select one entry for the blank. Fill the blank in the way that best completes the text.

In early twentieth-century India, the claim that films from the West screened by “first-class theaters” were exclusively “high-class features” was _____, since a film’s being screened by such theaters was interpreted as a confirmation of quality.

controversial

paradoxical

anachronistic

tautological

prescient

promote
discredit
reform

Select one entry from each column.

Questions 5 and 6 are based on this passage.

Little consensus exists about the consequences of divided partisan control of United States national institutions. Many scholars argue that in this situation, in which opposing political parties control the presidency and Congress, the incentive for executive-legislative cooperation on policy issues is reduced. In the same vein, some posit that unified control of the presidency and Congress is vital for presidential policy leadership. However, studies of the impact of divided government have produced mixed results because of scholars' different approaches. For example, in gauging the amount of innovative legislation adopted during a certain period, Mayhew finds that the number of significant laws adopted remains relatively constant regardless of the partisan configuration of institutions, while Edwards et al., in analyzing significant legislation that did not pass, conclude that divided government leads to more legislative failures.

The passage identifies which of the following as a factor contributing to the lack of consensus referred to in the first sentence?

- ☐ A lack of cooperation between executive and legislative institutions
- ☐ Partisan divisions among scholars of United States legislative history
- ☐ The historically partisan configuration of United States government
- ☐ Contrasting scholarly approaches to the study of legislative history
- ☐ A lack of agreement among scholars regarding what constitutes significant legislation

Select one answer choice.

Questions 5 and 6 are based on this passage.

Little consensus exists about the consequences of divided partisan control of United States national institutions. Many scholars argue that in this situation, in which opposing political parties control the presidency and Congress, the incentive for executive-legislative cooperation on policy issues is reduced. In the same vein, some posit that unified control of the presidency and Congress is vital for presidential policy leadership. However, studies of the impact of divided government have produced mixed results because of scholars' different approaches. For example, in gauging the amount of innovative legislation adopted during a certain period, Mayhew finds that the number of significant laws adopted remains relatively constant regardless of the partisan configuration of institutions, while Edwards et al., in analyzing significant legislation that did not pass, conclude that divided government leads to more legislative failures.

Consider each of the choices separately and select all that apply.

It can be inferred from the passage that the conclusion reached by Edwards et al. is consistent with which of the following scholarly positions?

- ☐ That divided partisan control reduces the incentive for executive-legislative cooperation
- ☐ That unified control of the presidency and Congress is vital for presidential policy leadership
- ☐ That the partisan configuration of national institutions has little effect on significant legislative activity

Select one or more answer choices.

Questions 7 to 9 are based on this passage.

While the shift from single-family to multifamily winter dwellings and the corresponding organizational changes in domestic groups were among the more conspicuous features of Labrador Inuit society in the seventeenth and eighteenth centuries, scholars disagree about what caused this shift. One proposed **explanation** looks at the shift as an adjustment to the negative effects of long-term environmental cooling on migratory whale and seal species, suggesting that communal housing allowed families to manage these scarce subsistence resources more efficiently. Here, the Labrador case is seen as consistent with traditional adaptive strategies used during periods of productive uncertainty, strategies that typically depend on intensification of communalism in some form.

Critics dismiss this explanation, citing insufficient evidence of resource scarcity and noting that Labrador's southerly location (relative to other Inuit locales) would have mitigated the effects of environmental cooling on sea mammal distributions. In fact, whales and seals retreating from former feeding ranges in Arctic waters were likely to have found haven off Labrador at this time. Still, geographically variable distributions probably occurred owing to short-term climatic perturbations such as heavier-than-usual ice formations. However, it remains unclear whether such episodes were significant enough to contribute to a shift in living arrangements.

It can be inferred from the passage that the disagreement between proponents and critics of the "explanation" focuses primarily on which of the following points?

- ☐ Whether long-term environmental cooling had any effect on Labrador
- ☐ Whether multifamily winter dwellings were more efficient than were single-family dwellings for the management of scarce resources
- ☐ Whether intensification of communalism represents a traditional adaptive strategy used during periods of productive uncertainty
- ☐ The extent to which the availability of subsistence resources in Labrador was adversely affected by climate change
- ☐ The extent to which communal strategies were effective in responding to whale and seal scarcity in Labrador

Select one answer choice.

Questions 7 to 9 are based on this passage.

While the shift from single-family to multifamily winter dwellings and the corresponding organizational changes in domestic groups were among the more conspicuous features of Labrador Inuit society in the seventeenth and eighteenth centuries, scholars disagree about what caused this shift. One proposed **explanation** looks at the shift as an adjustment to the negative effects of long-term environmental cooling on migratory whale and seal species, suggesting that communal housing allowed families to manage these scarce subsistence resources more efficiently. Here, the Labrador case is seen as consistent with traditional adaptive strategies used during periods of productive uncertainty, strategies that typically depend on intensification of communalism in some form.

Critics dismiss this explanation, citing insufficient evidence of resource scarcity and noting that Labrador's southerly location (relative to other Inuit locales) would have mitigated the effects of environmental cooling on sea mammal distributions. In fact, whales and seals retreating from former feeding ranges in Arctic waters were likely to have found haven off Labrador at this time. Still, geographically variable distributions probably occurred owing to short-term climatic perturbations such as heavier-than-usual ice formations. However, it remains unclear whether such episodes were significant enough to contribute to a shift in living arrangements.

According to the passage, a proponent of the "explanation" would agree with which of the following statements about multifamily winter dwellings in Labrador Inuit society?

- ☐ The changes in social structure implied by the shift to such dwellings were in keeping with traditional strategies designed to address resource scarcity.
- ☐ The use of such dwellings resulted in a decline in the consumption of certain scarce subsistence resources such as whales and seals.
- ☐ The shift to such dwellings enabled the Inuit to make use of resources other than whales and seals.
- ☐ Such dwellings exemplified an approach to the management of scarce resources that originated among the Inuit in the seventeenth and eighteenth centuries.
- ☐ Such dwellings remained popular among the Inuit even during periods when subsistence resources were not scarce.

Select one answer choice.

Questions 7 to 9 are based on this passage.

While the shift from single-family to multifamily winter dwellings and the corresponding organizational changes in domestic groups were among the more conspicuous features of Labrador Inuit society in the seventeenth and eighteenth centuries, scholars disagree about what caused this shift. One proposed **explanation** looks at the shift as an adjustment to the negative effects of long-term environmental cooling on migratory whale and seal species, suggesting that communal housing allowed families to manage these scarce subsistence resources more efficiently. Here, the Labrador case is seen as consistent with traditional adaptive strategies used during periods of productive uncertainty, strategies that typically depend on intensification of communalism in some form.

Critics dismiss this explanation, citing insufficient evidence of resource scarcity and noting that Labrador's southerly location (relative to other Inuit locales) would have mitigated the effects of environmental cooling on sea mammal distributions. In fact, whales and seals retreating from former feeding ranges in Arctic waters were likely to have found haven off Labrador at this time. Still, geographically variable distributions probably occurred owing to short-term climatic perturbations such as heavier-than-usual ice formations. However, it remains unclear whether such episodes were significant enough to contribute to a shift in living arrangements.

According to the passage, criticism of the "explanation" focuses on which of the following points?

- ☐ The tendency of the Inuit to rely on traditional adaptive strategies during periods of productive uncertainty
- ☐ The negative effect that short-term climatic perturbations may have had on subsistence resources
- ☐ The fact that climate change would have been less severe in Labrador than in other Inuit locales
- ☐ The absence of any evidence indicative of long-term environmental cooling
- ☐ Evidence that there was no resource scarcity coincident with the transition to multifamily dwellings

Throughout human history, intelligence and consciousness have been _____ concepts: those possessing much of the former are assumed, in some ill-defined way, to be more conscious than those less astute.

- ☐ disputed
- ☐ allied
- ☐ conflated
- ☐ loaded
- ☐ contested
- ☐ misjudged

Select two answer choices.

Question 13 is based on this passage.

Mayor: Vehicle exhaust produces dangerously high ozone levels in our city in hot, humid weather. As an incentive for people to commute by bus rather than by car, special free commuter buses will be scheduled on hot, humid days. Since a bus can carry about 40 people but produces only about 20 times as much exhaust as a car, ozone levels will be lower as long as the buses are more than half full.

Which of the following, if true, most seriously weakens the argument?

- ☐ Most of the people who would take the special free buses are currently members of carpools.
- ☐ The city does not currently have enough buses to transport all of the commuters who normally commute by car.
- ☐ The special buses that would be operating on hot, humid days would rarely, if ever, be filled to capacity.
- ☐ The amount of vehicle exhaust produced in the city is not significantly higher on hot, humid days.
- ☐ Not all commuter routes are used by enough people to warrant providing bus service for them.

Select one answer choice.

Questions 14 and 15 are based on this passage.

That nineteenth-century European women sculptors seldom saw their work displayed in the most prestigious locations can be linked to the genres (portraits, mythological figures) and the formats (reliefs and life-size or smaller-scale sculptures) in which they worked. But what was cause and what was effect of these women's limited access to public space? Women sculptors rarely received commissions for the highest genre in the hierarchy of public sculpture: the huge historical equestrian monument in a public square. Women made some life-size statues, but these were seldom placed on high pedestals in open public spaces. Public sculptures by women usually do not seem to have been designed for the monumentality of public space; they are often, essentially, interior sculptures that may or may not have been placed outside.

According to the passage, which of the following statements about the sculptures produced by nineteenth-century women sculptors is true?

- ☐ They tended to command somewhat lower prices than similar works produced by male sculptors.
- ☐ They were more likely to be commercially successful when the gender of the sculptor was unknown.
- ☐ They often appeared to have been designed for relatively intimate spaces.
- ☐ They seldom included figures on horseback.
- ☐ They were often produced in materials that were not well-suited to endure in outdoor conditions.

Select one answer choice.

Questions 14 and 15 are based on this passage.

That nineteenth-century European women sculptors seldom saw their work displayed in the most prestigious locations can be linked to the genres (portraits, mythological figures) and the formats (reliefs and life-size or smaller-scale sculptures) in which they worked. But what was cause and what was effect of these women's limited access to public space? Women sculptors rarely received commissions for the highest genre in the hierarchy of public sculpture: the huge historical equestrian monument in a public square. Women made some life-size statues, but these were seldom placed on high pedestals in open public spaces. Public sculptures by women usually do not seem to have been designed for the monumentality of public space; they are often, essentially, interior sculptures that may or may not have been placed outside.

The passage suggests which of the following about the "life-size statues" ?

- ☐ They were often considered too large for interior spaces but not sufficiently prestigious to appear in public squares.
- ☐ They were typical of the work of women sculptors because women sculptors frequently received commissions for such works.
- ☐ Some of them depicted subjects that would conventionally have been depicted in formats smaller than life-size.
- ☐ Most of them were considered to fall outside the category of the highest genre in the hierarchy of public sculpture.
- ☐ Most of them were designed by sculptors who intended that they be displayed in open public spaces.

$$\frac{2y-5}{6} - \frac{y-7}{3} =$$

- ☐ $-\frac{19}{6}$ ☐ $\frac{1}{2}$ ☐ $\frac{3}{2}$ ☐ $\frac{y-12}{3}$ ☐ $\frac{y+2}{3}$

Select one answer choice.

A sequence of numbers $P_1, P_2, P_3, \dots, P_n, \dots$ is defined as follows: $P_1 = 1$, $P_2 = 2$, and $P_n = 4 \frac{P_{n-1}}{P_{n-2}}$ for each integer n greater than 2. What is the value of P_4 ?

- ☐ 4
- ☐ 6
- ☐ 12
- ☐ 16
- ☐ 24

At a souvenir shop on Monday, a certain type of T-shirt was sold for \$17.49, which was the list price plus a sales tax. The following Friday the list price of the same type of T-shirt was reduced by 20 percent to \$13.20, excluding the sales tax. What was the sales tax rate, in percent?

- ☐ 5.5%
- ☐ 6.0%
- ☐ 7.5%
- ☐ 9.0%
- ☐ 12.5%

An apple falls straight to the ground from a tree branch 8 meters above the ground. The apple's height above the ground, t seconds after it starts falling, is H meters, where $H = 8 - 4.9t^2$ and $t \geq 0$. How many seconds after the apple starts falling does it hit the ground?

Give your answer to the nearest 0.1 second.

 seconds

In a certain corporation, an employee council will consist of 3 employees who will be selected from 20 eligible employees. If each of the 3 positions on the council has a different role on the council, then there are 6,840 possible 3-employee selections from the 20 eligible employees. How many possible 3-employee selections are there if the 3 positions all have the same role?

- ☐ (3) (6,840)
 ☐ (6) (6,840)
 ☐ (20) (6,840)
 ☐ $\frac{6,840}{3}$
 ☐ $\frac{6,840}{6}$

Select one answer choice.

A ball is dropped from a height of 3 meters and bounces repeatedly. After each bounce, it reaches a height that is 65 percent of its previous height. If the height of the ball after the n th bounce is less than 20 centimeters, which of the following could be the value of n ?

Indicate all such values.

☐ 4

☐ 5

☐ 6

☐ 7

☐ 8

Of the 67 children residing on a certain street, 52 children enjoy biking and 21 children enjoy roller-skating. If all but 5 of the children enjoy biking or roller-skating or both, how many of the children enjoy either biking or roller-skating, but not both biking and roller-skating?

- ☐ 11
- ☐ 31
- ☐ 51
- ☐ 61
- ☐ 62

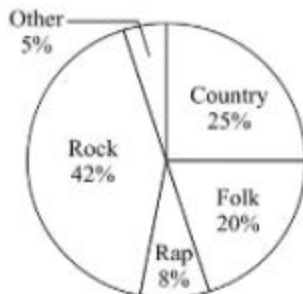

Select one answer choice.

Jill has 2 blue hats and 4 white hats in a drawer. If she is to select 2 hats at random from the drawer, without replacement, what is the probability that both hats selected will be blue?

Give your answer as a fraction.

Enter your answer as a fraction, with the numerator and denominator in their respective answer boxes. Backspace to erase.

Rodger has a collection of 600 music CDs. The graph above shows the distribution of the CDs by music genre. Which of the following statements about the CD collection are true?

Indicate all such statements.

- ☐ There are more than 250 CDs in the rock genre.
- ☐ The number of CDs in the country genre is 5 percent greater than the number of CDs in the folk genre.
- ☐ The CDs in the country and rap genres together comprise $\frac{1}{3}$ of the collection.
