We have been so persuaded that (i) _____ and disgraceful conduct go together that we find it difficult to believe that an affable man such as Sir Arthur Conan Doyle can be (ii) _____ of both goodness and superior ability. Indeed, appalling conduct is sometimes itself (iii) _____ the greatest talent.

Blank (i)

notoriety
genius
luck

Blank (ii)

envious
regretful
possessed

Blank (iii)

taken as evidence of
seen as a violation of
viewed as unrelated to

Select one entry from each column.

Questions 4 and 5 are based on this passage.

Change in the level of urbanization (the proportion of the population inhabiting towns) following the mid-fourteenth-century plague epidemic in England is a contentious issue. Some scholars argue that high urban mortality levels combined with reduced rural-to-urban migration may have meant a decline in England's urbanization. Alternatively it can be maintained that the cloth industry's expansion and a general rise in living standards in the late fourteenth century may have increased per capita demand for urban goods and services. Given the direct correlation between rising incomes and a growth in urbanization, which has been seen as typical of preindustrial economies, it is thus possible that, even if England's urban population underwent an absolute decline in this period, the urban sector still grew in relative terms.

The passage suggests which of the following about the number of people living in towns in England during the fourteenth century?

- ☐ It may have declined even as urbanization increased.
- ☐ It depended largely on the expansion of particular industries.
- ☐ It is widely agreed to have grown faster than the number of people living in rural areas.
- ☐ It remained about the same throughout the plague epidemic.
- ☐ It may have declined even as urban mortality levels decreased.

Select one answer choice.

Questions 4 and 5 are based on this passage.

Change in the level of urbanization (the proportion of the population inhabiting towns) following the mid-fourteenth-century plague epidemic in England is a contentious issue. Some scholars argue that high urban mortality levels combined with reduced rural-to-urban migration may have meant a decline in England's urbanization. Alternatively it can be maintained that the cloth industry's expansion and a general rise in living standards in the late fourteenth century may have increased per capita demand for urban goods and services. Given the direct correlation between rising incomes and a growth in urbanization, which has been seen as typical of preindustrial economies, it is thus possible that, even if England's urban population underwent an absolute decline in this period, the urban sector still grew in relative terms.

The passage identifies which of the following as a common tendency in preindustrial societies?

- ☐ Both rural and urban populations generally grow as incomes increase.
- ☐ Rural-to-urban migration tends to decrease as urbanization increases.
- ☐ Improved living standards in towns lead to improved living standards in rural areas.
- ☐ The economic sectors that expand most rapidly are those that benefit primarily urban residents.
- ☐ A rise in incomes is linked to a decline in the proportion of the population inhabiting rural areas.

She objected to the language in the report, arguing that it portrayed the central problem as stable and capable of being defined, when it was in fact _____.

- ☐ outlandish
- ☐ nebulous
- ☐ unattainable
- ☐ amorphous
- ☐ impracticable
- ☐ complicated

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Although evolutionary psychologists do not seem quite as imperialist in their intellectual ambitions as their sociobiologist forebears of the 1970s, they tend, in some critics' view, to be no less _____ in their claims.

- ☐ abashed
- ☐ arrogant
- ☐ impetuous
- ☐ hubristic
- ☐ narcissistic
- ☐ diffident

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

A key characteristic in the author' s presentation of his character' s dreary life is _____: paragraphs are short, sentences are laconic, patterns of repetition and circularity are evoked by means of symbolic shorthand.

- ☐ redundancy
- ☐ economy
- ☐ hyperbole
- ☐ concision
- ☐ exaggeration
- ☐ restraint

Select two answer choices.

Questions 10 to 12 are based on this passage.

While Gayl Jones' s fiction has received significant critical attention, her comparably quiet, yet formidable, corpus of poetry has been virtually ignored by scholars. Significantly, Jones' s first publication appeared in verse, and her literary production from 1969 through the early 1980s includes nearly as many poems as short stories, betraying a formative and consistent involvement with poetry. Jones' s lack of critical recognition as a poet is at least partially traceable to her documented ambivalence regarding genre boundaries and artistic identity: "I' ve never really considered myself a poet. I' ve written what I call poetry but I' ve always thought of myself as primarily a fiction writer and so I write poetry from the viewpoint and interest of a storyteller." Consistent with this self-conceptualization, Jones' s critical observations regarding the work of other poets often focus on techniques traditionally associated with fiction writing: narrative and its rendering usually appear to outweigh the various poetic conventions of prosody and form. While reviewing the work of Sterling Brown, Jones provides a checklist of what chiefly attracts her in poetry: characterization and narrative voice are foregrounded, accompanied by such structural concerns of fiction as dramatic forms and scenes, all of which combine to reveal a sensibility interested primarily in formulating a poetics of effective storytelling.

According to the passage, the "checklist" provides a record of which of the following?

- ☐ The features of Sterling Brown' s poetry that Jones finds unique
- ☐ The techniques that Jones believes distinguish poetry from fiction
- ☐ Jones' s effort to distinguish herself from other poets
- ☐ Ways in which Jones influenced Sterling Brown
- ☐ The qualities in poetry that most interest Jones

Select one answer choice.

Questions 10 to 12 are based on this passage.

While Gayl Jones' s fiction has received significant critical attention, her comparably quiet, yet formidable, corpus of poetry has been virtually ignored by scholars. Significantly, Jones' s first publication appeared in verse, and her literary production from 1969 through the early 1980s includes nearly as many poems as short stories, betraying a formative and consistent involvement with poetry. Jones' s lack of critical recognition as a poet is at least partially traceable to her documented ambivalence regarding genre boundaries and artistic identity: "I' ve never really considered myself a poet. I' ve written what I call poetry but I' ve always thought of myself as primarily a fiction writer and so I write poetry from the viewpoint and interest of a storyteller." Consistent with this self-conceptualization, Jones' s critical observations regarding the work of other poets often focus on techniques traditionally associated with fiction writing: narrative and its rendering usually appear to outweigh the various poetic conventions of prosody and form. While reviewing the work of Sterling Brown, Jones provides a checklist of what chiefly attracts her in poetry: characterization and narrative voice are foregrounded, accompanied by such structural concerns of fiction as dramatic forms and scenes, all of which combine to reveal a sensibility interested primarily in formulating a poetics of effective storytelling.

Which of the following can be inferred from the passage regarding the nature of Jones' s poetry?

- ☐ It reflects her self-identification as a teller of stories.
- ☐ It is more assertive than her poetry criticism.
- ☐ It is acclaimed more as storytelling than as actual poetry.
- ☐ It uses dramatic forms and scenes in unprecedented ways.
- ☐ Its concern with narrative voice is greater than that of most fiction of the period.

Select one answer choice.

Questions 10 to 12 are based on this passage.

While Gayl Jones' s fiction has received significant critical attention, her comparably quiet, yet formidable, corpus of poetry has been virtually ignored by scholars. Significantly, Jones' s first publication appeared in verse, and her literary production from 1969 through the early 1980s includes nearly as many poems as short stories, betraying a formative and consistent involvement with poetry. Jones' s lack of critical recognition as a poet is at least partially traceable to her documented ambivalence regarding genre boundaries and artistic identity: "I' ve never really considered myself a poet. I' ve written what I call poetry but I' ve always thought of myself as primarily a fiction writer and so I write poetry from the viewpoint and interest of a storyteller." Consistent with this self-conceptualization, Jones' s critical observations regarding the work of other poets often focus on techniques traditionally associated with fiction writing: narrative and its rendering usually appear to outweigh the various poetic conventions of prosody and form. While reviewing the work of Sterling Brown, Jones provides a checklist of what chiefly attracts her in poetry: characterization and narrative voice are foregrounded, accompanied by such structural concerns of fiction as dramatic forms and scenes, all of which combine to reveal a sensibility interested primarily in formulating a poetics of effective storytelling.

The passage suggests which of the following regarding critics of Jones' s work?

- ☐ Their lack of interest in Jones' s poetry has been prompted by their unawareness of the extent of her poetic production.
- ☐ They have tended to judge Jones' s work in different genres according to the definitions of those genres accepted by Jones' s contemporaries.
- ☐ The nature of their focus on Jones has been influenced by Jones' s own characterizations of her work.
- ☐ They have discounted Jones' s observations regarding the work of other poets as narrow-minded.
- ☐ They have foregrounded Jones' s explorations of prosody and form at the expense of her interest in narrative.

contradict
corroborate
degrade

Blank (ii)

unreliable
intransigent
obsequious

Blank (iii)

transparency
taint
obscurity

Select one entry from each column.

Questions 5 and 6 are based on this passage.

Although vastly popular during its time, much nineteenth-century women's fiction in the United States went unread by the twentieth-century educated elite, who were taught to ignore it as didactic. However, American literature has a tradition of didacticism going back to its Puritan roots, shifting over time from sermons and poetic transcripts into novels, which proved to be perfect vehicles for conveying social values. In the nineteenth century, critics reviled Poe for neglecting to conclude his stories with pithy moral tags, while Longfellow was canonized for his didactic verse. Although rhetorical changes favoring the antididactic can be detected as nineteenth-century America transformed itself into a secular society, it was twentieth-century criticism, which placed aesthetic value above everything else, that had no place in its doctrine for the didacticism of others.

Which of the following best describes the function of the highlighted sentence?

- ☐ It explains why the fiction mentioned in the first sentence was not popular in the twentieth century.
- ☐ It assists in drawing a contrast between nineteenth- and twentieth-century critics.
- ☐ It provides an example of how twentieth-century readers were taught to ignore certain literature.
- ☐ It questions the usefulness of a particular distinction between Poe and Longfellow made by the critics.
- ☐ It explains why Poe's stories were more popular than Longfellow's verse during the nineteenth century.

Select one answer choice.

Questions 5 and 6 are based on this passage.

Although vastly popular during its time, much nineteenth-century women's fiction in the United States went unread by the twentieth-century educated elite, who were taught to ignore it as didactic. However, American literature has a tradition of didacticism going back to its Puritan roots, shifting over time from sermons and poetic transcripts into novels, which proved to be perfect vehicles for **conveying** social values. In the nineteenth century, critics reviled Poe for neglecting to conclude his stories with pithy moral tags, while Longfellow was canonized for his didactic verse. Although rhetorical changes favoring the antididactic can be detected as nineteenth-century America transformed itself into a secular society, it was twentieth-century criticism, which placed aesthetic value above everything else, that had no place in its doctrine for the didacticism of others.

In the context in which it appears, "conveying" most nearly means

- ☐ carrying
- ☒ transferring
- ☐ granting
- ☐ imparting
- ☐ projecting

Select one answer choice.

Questions 7 to 9 are based on this passage.

Ingestion of food containing spores of the pathogen *Ascosphaera apis* causes a fatal fungal disease known as chalk brood in honeybee larvae. However, larvae must be chilled to about 30°C (normal brood-comb temperature is 33-36°C) for the disease to develop. Accordingly, chalk brood is most common in spring and in small colonies. A recent study revealed that honeybees responsible for hive-temperature maintenance purposely raised the hives' temperature when colonies were inoculated with *A. apis*. This "fever," or up-regulation of temperature, occurred before any larvae died, suggesting that the response is preventative and that either honeybee workers detect the infection before symptoms are visible or larvae communicate the ingestion of the pathogen. Temperature returned to normal by the end of the study, suggesting that increased temperature is not optimal when broods are not infected, as well as that the fever does not result merely from normal colony growth (i.e., an increase in the number of workers available for temperature maintenance).

According to the passage, researchers concluded that fever in honeybee colonies is preventative because their study showed that such fever

- ☐ does not occur when hive temperatures are within normal range
- ☐ protects adult bees from contracting chalk brood infection
- ☐ occurs prior to the death of any larvae
- ☐ is more likely to occur in spring than in summer
- ☐ does not have an effect on uninfected broods

Select one answer choice.

Questions 7 to 9 are based on this passage.

Ingestion of food containing spores of the pathogen *Ascosphaera apis* causes a fatal fungal disease known as chalk brood in honeybee larvae. However, larvae must be chilled to about 30°C (normal brood-comb temperature is 33-36°C) for the disease to develop. Accordingly, chalk brood is most common in spring and in small colonies. A recent study revealed that honeybees responsible for hive-temperature maintenance purposely raised the hives' temperature when colonies were inoculated with *A. apis*. This "fever," or up-regulation of temperature, occurred before any larvae died, suggesting that the response is preventative and that either honeybee workers detect the infection before symptoms are visible or larvae communicate the ingestion of the pathogen. Temperature returned to normal by the end of the study, suggesting that increased temperature is not optimal when broods are not infected, as well as that the fever does not result merely from normal colony growth (i.e., an increase in the number of workers available for temperature maintenance).

The passage implies that if hive temperature had not returned to normal by the end of the study in question, a probable conclusion of the researchers would have been that

- ☐ up-regulation of temperature is a preventative measure against chalk brood
- ☐ honeybees are incapable of purposely raising hive temperatures
- ☐ *A. apis* cannot be completely eradicated through up-regulation of temperature alone
- ☐ honeybee larvae have a mechanism to alert adult honeybees to the presence of *A. apis*
- ☐ honeybee larvae may benefit from increased hive temperature even when there is no *A. apis* present

Select one answer choice.

Questions 7 to 9 are based on this passage.

Ingestion of food containing spores of the pathogen *Ascosphaera apis* causes a fatal fungal disease known as chalk brood in honeybee larvae. However, larvae must be chilled to about 30°C (normal brood-comb temperature is 33-36°C) for the disease to develop. Accordingly, chalk brood is most common in spring and in small colonies. A recent study revealed that honeybees responsible for hive-temperature maintenance purposely raised the hives' temperature when colonies were inoculated with *A. apis*. This "fever," or up-regulation of temperature, occurred before any larvae died, suggesting that the response is preventative and that either honeybee workers detect the infection before symptoms are visible or larvae communicate the ingestion of the pathogen. Temperature returned to normal by the end of the study, suggesting that increased temperature is not optimal when broods are not infected, as well as that the fever does not result merely from normal colony growth (i.e., an increase in the number of workers available for temperature maintenance).

According to the passage, which of the following is true of chalk brood infection among honeybee larvae?

- ☐ Larvae in small colonies are more likely to pass the infection to adult honeybees than are larvae in large ones.
- ☐ Infection with chalk brood induces larvae to raise their hive's temperature.
- ☐ The infection is more likely to affect larvae in winter than in spring.
- ☐ Larvae fail to develop symptoms of the disease when their brood-comb temperature remains within the normal range.
- ☐ Infected larvae exhibit visible symptoms of disease for a significant time before death.

At first, most of the famous fairy tales seem so implausible and so irrelevant to contemporary life that their _____ is hard to understand.

- ☐ universality
- ☐ persistence
- ☐ appeal
- ☐ ephemerality
- ☐ survival
- ☐ transience

Select two answer choices.

Question 13 is based on this passage.

In most coastal regions, the level of the sea is rising in relation to the land by one to two millimeters a year, and this trend would be explained by the hypothesis that at the North and South Poles, the amount of ice that melts during the summer now exceeds the amount that forms during the winter. The hypothesis is not undermined by observations that sea levels are falling relative to the Scandinavian coast by four millimeters a year. Much land in northern latitudes, including Scandinavia, is still rising in response to being freed of the enormous weight of the ice that used to cover it during the last ice age, and in Scandinavia the land is now rising faster than the sea.

In the passage, the two highlighted portions play which of the following roles?

- ☐ The first is a hypothesis that is considered and rejected in the passage; the second states observations on which that rejection is based.
- ☐ The first is a hypothesis that has been used to explain a certain observed trend; the second presents particular exceptions to this trend that, according to evidence presented in the passage, require that hypothesis to be revised.
- ☒ The first presents a phenomenon the explanation of which is at issue; the second provides evidence in support of the explanation that the passage adopts.
- ☐ The first is a hypothesis that the passage reconciles with seemingly incompatible observations; the second states those observations.
- ☐ The first is a hypothesis that is defended in the passage; the second states observations whose accuracy is challenged in the course of that defense.

Select one answer choice.

Questions 14 and 15 are based on this passage.

A longstanding scholarly neglect of the subject of cooking is partly attributable to the antiquated “separate spheres” schema that differentiated a private female sphere, which included food preparation and consumption, from a public male sphere, which included food production. While this concept never reflected most women’s daily realities—women are major food producers worldwide—the ideological polarization certainly influenced the development of academia: it effectively segregated women into working in low-status “domestic” disciplines such as dietetics and home economics, while the male-dominated realms of industrial agriculture, food technology, mass retailing, and corporate management enjoyed public respect and academic prestige. This institutionalized bias delayed serious attention to cooking even after feminists in the 1960s obliterated the notion of separate spheres and more women entered all areas of academia.

The primary purpose of the passage is to

- ☐ examine the origins of an influential theory
- ☐ account for the dearth of research on a particular subject
- ☐ contrast two scholarly approaches to the study of a phenomenon
- ☐ explain how a certain distinction came to dominate an academic discipline
- ☐ question the aptness of a particular schema for understanding a development

Select one answer choice.

Questions 14 and 15 are based on this passage.

A longstanding scholarly neglect of the subject of cooking is partly attributable to the antiquated “separate spheres” schema that differentiated a private female sphere, which included food preparation and consumption, from a public male sphere, which included food production. While this concept never reflected most women’s daily realities—women are major food producers worldwide—the ideological polarization certainly influenced the development of academia: it effectively segregated women into working in low-status “domestic” disciplines such as dietetics and home economics, while the male-dominated realms of industrial agriculture, food technology, mass retailing, and corporate management enjoyed public respect and academic prestige. This institutionalized bias delayed serious attention to cooking even after **feminists** in the 1960s obliterated the notion of separate spheres and more women entered all areas of academia.

The author mentions “feminists” primarily in order to

- ☐ elaborate on a particular rift in scholarly circles
- ☐ answer a particular challenge to the “separate spheres” schema
- ☐ cite a cultural development that influenced the study of food
- ☐ help account for an ideological shift within academia
- ☐ underscore the tenacity of an attitude that constrained scholarly inquiry

A survey was given to a sample of residents in a certain town to determine the level of interest in creating a new park. Of those residents in the sample, 50 percent responded they were in favor of the park and 30 percent responded they were not in favor of the park. The remaining 20 percent of the sample did not respond to the survey.

Which of the following statements individually provide(s) sufficient additional information to determine the number of residents in the sample?

Indicate all such statements.

- ☒ The number of residents in the sample who did not respond was 100.
- ☐ The number of residents in the sample in favor of the park was 2.5 times greater than the number who did not respond.
- ☐ The number of residents in the sample in favor of the park was 100 greater than the number not in favor of the park.

A certain list consists of r numbers whose average (arithmetic mean) is 20. A separate list consists of $r + 4$ numbers whose average is 30. If the average of all the numbers on the two lists combined is 26, what is the value of r ?

☐ 4

☐ 5

☐ 6

☐ 7

☐ 8

A sales representative's monthly earnings consist of a base salary of \$3,500 plus a commission equal to 5 percent of monthly sales in excess of \$50,000. If monthly sales total s dollars and $s > 50,000$, what are the sales representative's monthly earnings in terms of s , in dollars?

☐ $0.05s + 1,000$

☐ $0.05s + 3,500$

☐ $0.05(s - 3,500)$

☒ $0.05(s - 50,000)$

☐ $0.05(s - 53,500)$

Select one answer choice.

A deposit of \$3,000 was made into an account that earned interest at the annual rate of r percent, compounded annually, where r is a constant. The interest was paid into the account, and there were no other deposits to or withdrawals from the account. At the end of the first year, the amount in the account, including interest, was \$3,090. The amount of interest earned for the second year was what fraction of the total amount of interest earned for the 2 years combined?

Enter your answer as a fraction, with the numerator and denominator in their respective answer boxes. Backspace to erase.
