Questions 4 and 5 are based on this passage.

American and British critics who wrote enthusiastic reviews of west African writer Amos Tutuola's 1952 book *The Palm-Wine Drinkard* typically dwelt less on his rhetorical skills and more on the text as an exemplar of naïve art. While these metropolitan critics were enchanted by the book, the initial literary reception in west Africa was by contrast highly critical. Concerned to avoid stereotyping, critics there objected to what they saw as very poor writing and expressed dismay at the uncritical promotion of the book. Many protested against what they saw as a metropolitan celebration of exoticism. For example, Adeagbo Akinjogbin attributed the novel's success in the West to ignorance and a desire to believe "all sorts of fantastic tales about Africa."

The passage suggests that the metropolitan critics who praised Tutuola's book would most likely agree with which of the following claims about literature?

- ☐ Works that lack apparent sophistication might nevertheless have artistic value.
- ☐ Poor writing is never acceptable in a literary work, even one presented as naïve art.
- ☐ One can only fully appreciate a work of literature that is produced within a culture that one understands thoroughly.
- ☐ Nonliterary agendas often hamper the production of great literature.
- ☐ The value of a given literary work is mostly determined by the rhetorical skills of the author.

Select one answer choice.

Questions 4 and 5 are based on this passage.

American and British critics who wrote enthusiastic reviews of west African writer Amos Tutuola's 1952 book *The Palm-Wine Drinkard* typically dwelt less on his rhetorical skills and more on the text as an exemplar of naïve art. While these metropolitan critics were enchanted by the book, the initial literary reception in west Africa was by contrast highly critical. Concerned to avoid stereotyping, critics there objected to what they saw as very poor writing and expressed dismay at the uncritical promotion of the book. Many protested against what they saw as a metropolitan celebration of exoticism. For example, Adeagbo Akinjogbin attributed the novel's success in the West to ignorance and a desire to believe "all sorts of fantastic tales about Africa."

The passage implies that west African literary critics objected to the failure of

- ☐ many American and British critics to recognize the subtlety of Tutuola's rhetorical skills
- ☐ many American and British critics to praise any west African novels other than *The Palm-Wine Drinkard*
- ☐ many American and British critics to evaluate the style of *The Palm-Wine Drinkard*
- ☐ certain American and British critics to find *The Palm-Wine Drinkard* enchanting
- ☐ west African writers to produce works that were similar in content to *The Palm-Wine Drinkard* but better written

The Chippewa regarded their treaties with the federal government as solemn covenants and therefore, throughout the twentieth century, met efforts by governmental officials to _____ those treaties with both open and hidden resistance.

- ☐ replicate
- ☒ abrogate
- ☐ respect
- ☐ renegotiate
- ☒ nullify
- ☐ honor

Select two answer choices.

Questions 10 to 12 are based on this passage.

The following passage comes from a study of gull bill markings.

Some species of gulls have uniformly colored bills, but many (62 percent in our sample) have beaks with differently colored tips, stripes, or spots that act as a focus for the pecking of newly hatched chicks as they beg for food. In an attempt to understand why, we determined whether adult gulls of those species with newly hatched chicks that are small in relation to the size of the adult are more likely to have such patterned beaks. This work is based on Hailman's (1967) suggestion that gulls with greater bill depths (large species) tend to have only a restricted area of red on the bill (i.e., a red tip or spot), whereas smaller-billed species have uniform bills. We suggest that the most plausible reason for any size-related difference is that concentrating a small chick's pecking on a particular part of the bill is more effective than is unfocused pecking in stimulating the adult to regurgitate food. As well as encouraging the chick to peck, the tip of the bill, or the gonys (where stripes and spots are located), might be more sensitive than are other parts of the beak to the feeble pecking of a small chick, or a small chick might more effectively occupy the parent's visual field when pecking there.

The passage implies which of the following about food regurgitation in adult gulls as a chick-feeding behavior?

- ☐ It occurs most frequently when chicks are newly hatched.
- ☒ It is at least partly prompted by tactile signals.
- ☐ It is one of several means of feeding newly hatched chicks.
- ☐ Its effectiveness is related to chick size.
- ☐ Its occurrence is related to species' bill depth.

Select one answer choice.

Questions 10 to 12 are based on this passage.

The following passage comes from a study of gull bill markings.

Some species of gulls have uniformly colored bills, but many (62 percent in our sample) have beaks with differently colored tips, stripes, or spots that act as a focus for the pecking of newly hatched chicks as they beg for food. In an attempt to understand why, we determined whether adult gulls of those species with newly hatched chicks that are small in relation to the size of the adult are more likely to have such patterned beaks. This work is based on Hailman's (1967) suggestion that gulls with greater bill depths (large species) tend to have only a restricted area of red on the bill (i.e., a red tip or spot), whereas smaller-billed species have uniform bills. We suggest that the most plausible reason for any size-related difference is that concentrating a small chick's pecking on a particular part of the bill is more effective than is unfocused pecking in stimulating the adult to regurgitate food. As well as encouraging the chick to peck, the tip of the bill, or the gonys (where stripes and spots are located), might be more sensitive than are other parts of the beak to the feeble pecking of a small chick, or a small chick might more effectively occupy the parent's visual field when pecking there.

In the context of the passage, the reference to "the parent's visual field" serves primarily to

- ☐ propose a reason that red is found on gull bills more commonly than are other colors
- ☐ describe the second of two mutually exclusive explanations for the coloration of gull bills
- ☐ explain why it might be advantageous for gull bills to be marked in a particular way
- ☐ explain why gull parents may give preference to certain chicks when feeding them
- ☐ explain how a chick's size may contribute to its effectiveness at begging for food

Select one answer choice.

Questions 10 to 12 are based on this passage.

The following passage comes from a study of gull bill markings.

Some species of gulls have uniformly colored bills, but many (62 percent in our sample) have beaks with differently colored tips, stripes, or spots that act as a focus for the pecking of newly hatched chicks as they beg for food. In an attempt to understand why, we determined whether adult gulls of those species with newly hatched chicks that are small in relation to the size of the adult are more likely to have such patterned beaks. This work is based on Hailman's (1967) suggestion that gulls with greater bill depths (large species) tend to have only a restricted area of red on the bill (i.e., a red tip or spot), whereas smaller-billed species have uniform bills. We suggest that the most plausible reason for any size-related difference is that concentrating a small chick's pecking on a particular part of the bill is more effective than is unfocused pecking in stimulating the adult to regurgitate food. As well as encouraging the chick to peck, the tip of the bill, or the gonys (where stripes and spots are located), might be more sensitive than are other parts of the beak to the feeble pecking of a small chick, or a small chick might more effectively occupy the parent's visual field when pecking there.

According to the passage, a gull species' bill depth is associated with which of the following characteristics of the species?

- ☐ Chick feeding frequency
- ☐ Chick survival rate
- ☐ Parent longevity
- ☐ Overall chick size
- ☐ Overall adult size

Select one answer choice.

Of the students in class M , 2 percent dropped the class. Of the students in class N , 8 percent dropped the class.

Quantity A

The number of students that dropped class M

Quantity B

The number of students that dropped class N

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

- ☐ 12
- ☐ 15
- ☐ 18

Select one answer choice.

Questions 6 to 8 are based on the following data.

Employment in Region X by Sector of the Economy**Predicted Changes in Number of People Employed According to Projection A and Projection B**

Sector of Economy	Projection A	Projection B
Agriculture	+10,000	+5,000
Construction	+20,000	+10,000
Education	-5,000	+15,000
Finance	+5,000	+20,000
Manufacturing	+15,000	-5,000

The number of people currently employed in agriculture is what percent of the total number of people currently employed in the five sectors shaded in the graph?

☐ 2%☐ 2.5%☐ 5%☐ 10%☐ 40%

Select one answer choice.

Questions 6 to 8 are based on the following data.

Employment in Region X by Sector of the Economy**Predicted Changes in Number of People Employed According to Projection A and Projection B**

Sector of Economy	Projection A	Projection B
Agriculture	+10,000	+5,000
Construction	+20,000	+10,000
Education	-5,000	+15,000
Finance	+5,000	+20,000
Manufacturing	+15,000	-5,000

If 187,500 people are currently employed in manufacturing, how many more people are currently employed in finance than in agriculture?

 people

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

Questions 6 to 8 are based on the following data.

Employment in Region X by Sector of the Economy**Percent Distribution of
People Currently Employed****Predicted Changes in Number of People Employed
According to Projection A and Projection B**

Sector of Economy	Projection A	Projection B
Agriculture	+10,000	+5,000
Construction	+20,000	+10,000
Education	-5,000	+15,000
Finance	+5,000	+20,000
Manufacturing	+15,000	-5,000

If the average (arithmetic mean) annual salary of the people currently employed in agriculture is \$35,000 and if the average annual salary of the people currently employed in construction is \$45,000, what is the average annual salary of the people currently employed in agriculture and construction combined?

☐ \$37,500☐ \$40,000☐ \$40,500☐ \$42,500☒ \$43,000

Select one answer choice.

If x and y are integers such that $(10^x)(2^y) = 25$, what is the value of y ?

- ☐ -5
- ☐ -2
- ☐ 0
- ☐ 2
- ☐ 5

Select one answer choice.

Vladimir invested \$10,000 for one year. He invested some of the amount at 4 percent simple annual interest and the rest of the amount at 6 percent simple annual interest. If the total interest earned for the year was between \$450 and \$550, which of the following statements must be true?

Indicate all such statements.

- ☐ The amount invested at 6 percent simple annual interest was greater than \$2,000.
- ☐ The amount invested at 6 percent simple annual interest was less than \$8,000.
- ☐ The amount invested at 6 percent simple annual interest was more than 3 times the amount invested at 4 percent simple annual interest.

In the figure above, the area of equilateral triangle ABC is $25\sqrt{3}$. What is the area of square $ACDE$?

Thorough cleanings or restorations that try to return much-loved old master paintings to their original condition (i)_____. Quite apart from a reasonable wariness of paint loss, sheer loyalty to the (ii)_____ look of a work, dirt and all, prejudices many. There are also academics who (iii)_____ the removal of retouches and even of overpaintings, holding that even though they may date from years after the original composition, they embody history in themselves.

Blank (i)

generally take years to complete
are increasingly science based
invariably face opposition

Blank (ii)

accustomed
refined
pristine

Blank (iii)

argue for
vacillate about
militate against

Select one entry from each column.

Questions 5 and 6 are based on this passage.

Kam-Biu Liu's examination of sediments from Western Lake, Florida, on the coast of the Gulf of Mexico, shows strikes by twelve very severe hurricanes in the past 3,400 years. Yet almost all occurred more than 1,000 years ago suggesting that hurricane activity was much higher then. What would account for this change? Liu believes long-term changes in the position and strength of the Bermuda high could be responsible. The Bermuda high, an annual area of high pressure in the North Atlantic, helps determine whether hurricanes forming in the Caribbean head west into the Gulf or veer north. Thus, there were not more hurricanes; it is just that more hit the Gulf Coast. Sediments from the Atlantic coast farther north, from Cape Cod to Virginia Beach, support this hypothesis.

Which of the following best describes the issue raised by the question in the highlighted portion of the passage?

- ☒ What caused occurrences of a phenomenon to be unevenly distributed across time?
- ☐ What caused occurrences of a phenomenon to be more severe when they happened in an earlier period and less severe in a later one?
- ☐ Why is a physical record of a phenomenon less reliable for a more recent period than it is for an earlier one?
- ☐ Why is a particular location more prone to a certain kind of occurrence than are other apparently similar locations?
- ☐ Can a particular methodology be relied on, given that it has produced an anomalous result?

Select one answer choice.

Questions 5 and 6 are based on this passage.

Kam-Biu Liu's examination of sediments from Western Lake, Florida, on the coast of the Gulf of Mexico, shows strikes by twelve very severe hurricanes in the past 3,400 years. Yet almost all occurred more than 1,000 years ago suggesting that hurricane activity was much higher then. What would account for this change? Liu believes long-term changes in the position and strength of the Bermuda high could be responsible. The Bermuda high, an annual area of high pressure in the North Atlantic, helps determine whether hurricanes forming in the Caribbean head west into the Gulf or veer north. Thus, there were not more hurricanes; it is just that more hit the Gulf Coast. **Sediments** from the Atlantic coast farther north, from Cape Cod to Virginia Beach, support this hypothesis.

Consider each of the choices separately and select all that apply.

It can be inferred that the "sediments" mentioned in the final sentence of the passage provide evidence that

- ☐ during the last 3,400 years, the point at which North Atlantic hurricanes most commonly strike the North Atlantic coast has been moving steadily northward
- ☐ the Bermuda high did not affect weather patterns in the North Atlantic and the Gulf of Mexico until about 1,000 years ago
- ☐ compared with what occurred at Western Lake, between Virginia Beach and Cape Cod hurricanes became more common in the last 1,000 years

Select one or more answer choices.

Questions 7 to 9 are based on this passage.

In the 1920s, the Legal Realists, a group of constitutional scholars, challenged “formalism,” the then-dominant style of legal reasoning in the United States. Proponents of formalism, believing that neither personal experiences nor a case’s social implications should shape a judge’s ruling, urged judges to decide difficult new cases by applying to such cases general principles deduced from the decisions of previous courts in similar instances. Legal Realists insisted that judges’ decisions were influenced by the social implications of a decision and by life experiences, the latter inevitably coloring judges’ perceptions of a case’s parties and witnesses and thus of its “facts,” and that the legal principles derivable from previous decisions in similar instances were so inconsistent that such principles were likely to result in very different rulings. Thus, Legal Realists argued that legal principles, to be meaningful and useful, could not be general and abstract, but must instead refer to specific circumstances. Principles appropriate to deciding one case involving contracts might not be for another because contracts are entered into and enforced in widely different circumstances.

The primary purpose of the passage is to

- ☒ chronicle the development in the United States of a particular approach to judicial decision-making
- ☐ point out differences between two approaches to judicial decision-making in the United States
- ☐ suggest that two approaches to judicial decision-making in the United States are not as contradictory as they may appear to be
- ☐ explain how a particular approach to judicial decision-making has reshaped the decision-making behavior of judges in the United States
- ☐ show that one approach to judicial decision-making in the United States is superior to another

Select one answer choice.

Questions 7 to 9 are based on this passage.

In the 1920s, the Legal Realists, a group of constitutional scholars, challenged “formalism,” the then-dominant style of legal reasoning in the United States. Proponents of formalism, believing that neither personal experiences nor a case’s social implications should shape a judge’s ruling, urged judges to decide difficult new cases by applying to such cases general principles deduced from the decisions of previous courts in similar instances. Legal Realists insisted that judges’ decisions were influenced by the social implications of a decision and by life experiences, the latter inevitably coloring judges’ perceptions of a case’s parties and witnesses and thus of its “facts,” and that the legal principles derivable from previous decisions in similar instances were so inconsistent that such principles were likely to result in very different rulings. Thus, Legal Realists argued that legal principles, to be meaningful and useful, could not be general and abstract, but must instead refer to specific circumstances. Principles appropriate to deciding one case involving contracts might not be for another because contracts are entered into and enforced in widely different circumstances.

According to the passage, Legal Realists determined the usefulness of legal principles on the basis of which of the following?

- ☐ Their applicability to a wide variety of circumstances
- ☐ Their relevance to the circumstances of the cases to which they were applied
- ☐ The ease with which they were derived from the decisions of previous courts in similar cases
- ☐ The extent to which they were helpful in identifying similarities among seemingly disparate cases
- ☐ The extent to which they were colored by the personal experiences of the judges deducing them

Select one answer choice.

Questions 7 to 9 are based on this passage.

In the 1920s, the Legal Realists, a group of constitutional scholars, challenged “formalism,” the then-dominant style of legal reasoning in the United States. Proponents of formalism, believing that neither personal experiences nor a case’s social implications should shape a judge’s ruling, urged judges to decide difficult new cases by applying to such cases general principles deduced from the decisions of previous courts in similar instances. Question 13 is based on this passage.

Stress is a contributing factor in many illnesses, and for many people much of the stress in their lives is job-related. Purposeful leisure-time activities, as distinct from leisure time spent idly, are a good way of taking one's mind off one's job. Clearly, therefore, people who are under much job-related stress can get some measure of protection from stress-induced illness if they engage in purposeful leisure-time activities.

Which of the following, if true, most strengthens the argument?

- ☐ For people who experience job-related stress, purposeful leisure-time activities are not generally a source of stress.
- ☐ Generally, the people who experience the greatest job-related stress are those who have the least amount of leisure time.
- ☐ Many people who are under great stress on the job have no particular desire to engage in purposeful leisure-time activities.
- ☐ Medical treatments for people who have fallen ill do not usually include efforts to remove the stress that might have contributed to the illness.
- ☐ Some inherently stressful jobs are so structured that the people holding those jobs are guaranteed adequate leisure time at reasonable intervals.

Select one answer choice.

Questions 14 and 15 are based on this passage.

In 1755 British writer Samuel Johnson published an acerbic letter to Lord Chesterfield rebuking his patron for neglect and declining further support. Johnson's rejection of his patron's belated assistance has often been identified as a key moment in the history of publishing, marking the end of the culture of patronage. However, patronage had been in decline for 50 years, yet would survive, in attenuated form, for another 50. Indeed, Johnson was in 1762 awarded a pension by the Crown—a subtle form of sponsorship, tantamount to state patronage. The importance of Johnson's letter is not so much historical as emotional; it would become a touchstone for all who repudiated patrons and for all who embraced the laws of the marketplace.

Consider each of the choices separately and select all that apply.

The author of the passage mentions Johnson's 1762 pension award in order to

- ☐ provide a specific example of patronage's surviving into the second half of the eighteenth century
- ☐ emphasize that patronage still helped support Johnson's writing after his letter to Chesterfield
- ☐ provide evidence for a general trend in the later half of the eighteenth century of private patronage's being replaced by state sponsorship

Select one or more answer choices.

Questions 14 and 15 are based on this passage.

In 1755 British writer Samuel Johnson published an acerbic letter to Lord Chesterfield rebuking his patron for neglect and declining further support. Johnson's rejection of his patron's belated assistance has often been identified as a key moment in the history of publishing, marking the end of the culture of patronage.

However, patronage had been in decline for 50 years, yet would survive, in attenuated form, for another 50. Indeed, Johnson was in 1762 awarded a pension by the Crown—a subtle form of sponsorship, tantamount to state patronage. The importance of Johnson's letter is not so much historical as emotional; it would become a touchstone for all who repudiated patrons and for all who embraced the laws of the marketplace.

Which of the following best describes the function of the highlighted phrase in the context of the passage as a whole?

- ☐ It points out the most obvious implications of Johnson's letter to his patron.
- ☐ It suggests a motivation for Johnson's rejection of Chesterfield's patronage.
- ☐ It provides information that qualifies the assertion that Johnson's letter sharply defined the end of a publishing era.
- ☐ It provides a possible defense for Chesterfield's alleged neglect of Johnson.
- ☐ It refutes the notion that patrons are found primarily among the nobility.

- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

A piece of string one meter long was cut in half; then one half was discarded and the remaining half was cut in half. This pattern of cutting and discarding was continued until a piece of string of less than 0.04 meter was obtained. What is the number of cuts that were made?

☐ Three

☐ Four

☒ Five

☐ Six

☐ Seven

Select one answer choice.

In the rectangular coordinate system, the points $(5, p)$ and $(k, 4)$ are on the graph of $y = 3x^2 + 1$. If $k > 0$, then $k + p =$

- ☐ 49
- ☐ 75
- ☐ 76
- ☒ 77
- ☐ 125

Select one answer choice.

If r and s are integers such that $2 \leq r < s \leq 7$, what is the greatest possible value of $\frac{r+s}{rs}$?

☐ $\frac{14}{49}$

☐ $\frac{13}{42}$

☐ $\frac{9}{14}$

☒ $\frac{5}{6}$

☐ 1

Select one answer choice.

Three different television models— K , N , and P —are for sale at a local store. The cost of model K is 20 percent greater than the cost of model N , and the cost of model N is 25 percent greater than the cost of model P . The cost of model K is what percent greater than the cost of model P ?

 %

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

A bag contains 32 identically wrapped pieces of candy, of which 7 are mints, 11 are caramels, and the rest are chocolates. If Jill selects pieces of candy at random, what is the least number she must remove from the bag to be sure that she gets a caramel?

☐ 11

☐ 12

☐ 19

☐ 21

☐ 22

The probability that event A will occur is 0.40 and the probability that event B will occur is 0.30. If the two events are independent, what is the probability that at least one of the events will occur?

- ☐ 0.42
- ☐ 0.46
- ☐ 0.58
- ☐ 0.70
- ☐ 0.88

Select one answer choice.

Which of the following is an odd integer?

☐ $\sqrt{\frac{1}{(3^{-4})(5^{-2})}}$

☐ $\sqrt{\frac{1}{(2^{-2})(3^{-3})}}$

☐ $\sqrt{\frac{1}{(3^4)(5^{-2})}}$

☐ $\frac{1}{(2^{-5})(3^{-3})}$

☐ $\frac{1}{3^{-1} + 5^{-2}}$

Select one answer choice.

A scientist conducted an experiment and collected three measurements. Each measurement was an integer. The range of the three measurements was 2 and the least value was 1. Which of the following values could be the average (arithmetic mean) of the measurements collected for the experiment?

Indicate all such values.

☐ $\frac{4}{3}$

☐ $\frac{5}{3}$

☐ 2

☐ $\frac{7}{3}$

☐ 3

Select one or more answer choices.

A large pump and a small pump are available to fill a public fountain with 7,500 gallons of water. The pumps can be used alone or simultaneously. Working alone at their respective constant rates, the small pump would take 1.6 times as long as the large pump to fill the fountain. Working simultaneously at their respective constant rates, the two pumps would take 3 hours to fill the fountain. How long would the small pump take to fill the fountain, working alone at its constant rate?

- ☐ 1 hour 36 minutes
- ☐ 4 hours 25 minutes
- ☐ 4 hours 53 minutes
- ☐ 5 hours 36 minutes
- ☐ 7 hours 48 minutes

Select one answer choice.

$$\left(\frac{100}{x} + \frac{100}{y} \right) T = 100$$

Which of the following statements individually provide(s) sufficient additional information to determine the value of T ?

Indicate all such statements.

☐ $x + y = 10$

☐ $\frac{x}{y} = \frac{3}{2}$

☐ $\frac{xy}{x+y} = \frac{12}{5}$

Select one or more answer choices.
