

Select one entry for the blank. Fill the blank in the way that best completes the text.

The politician was famously restrained, with a tendency to focus his fury inward: while he would defend himself publicly against detractors' attacks, he would never stoop to _____.

refutation
adjuration
fulmination
asseveration
ingratiation

Select one answer choice.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

Standard thermal evolution models of giant planets employ initial conditions that are, to some extent, arbitrarily chosen, selected more for computational expediency than for physical accuracy. Since eventually the initial conditions (i)_____ the evolving planet, this approach is more (ii)_____ for mature planets than it is for young planets.

Blank (i)

become irrelevant to
are recreated by
enforce constraints on

Blank (ii)

involved
unpredictable
valid

Select one entry from each column.

For each blank select one entry from the corresponding column of choices. Fill all blanks in the way that best completes the text.

The main (i)_____ for pianists playing the keyboard works of Couperin lies in the effusion of embellishments, which are much easier to toss off without overemphasis, let alone (ii)_____, on the harpsichord than on the piano. Yet pianist Angela Hewitt' s handling of all those fleeting lfts and curlicues is a model of (iii)_____. As a result, little nothings like "Le Petit-Rien" are sheer rippling delights.

Blank (i)

difficulty
attraction
unknown

Blank (ii)

ungainliness
elegance
mastery

Blank (iii)

fierce intensity
economy and languor
lightness and elegance

Select one entry from each column.

Questions 4 and 5 are based on this passage.

Researchers studying colonial North America found that fields tended by Native American women produced higher crop yields than those of their Anglo-American contemporaries. Anglo-Americans, who grew wheat, plowed their fields, facilitating planting but degrading soil quality. Native American women, who did not plow, grew maize. Because the maize seed is much larger than cereal grains such as wheat, it need not be planted in a finely prepared seed bed and thrives in no-plow conditions. Furthermore, no-plow agriculture enabled Native American women to cultivate maize along with beans and squash, crops that return nitrogen to the soil, thus allowing continuous cultivation, whereas plowed fields must be periodically left fallow. When maize fields later began to be plowed, maize yields from the same land soon declined.

The author mentions “nitrogen” primarily to

- ☐ account for a particular historical change
- ☐ acknowledge one advantage of certain soil types
- ☐ note an effect of a particular farming practice
- ☐ cite a consequence of plowing fields before planting
- ☐ contrast the nutrients in different types of crops

Select one answer choice.

Questions 4 and 5 are based on this passage.

Researchers studying colonial North America found that fields tended by Native American women produced higher crop yields than those of their Anglo-American contemporaries. Anglo-Americans, who grew wheat, plowed their fields, facilitating planting but degrading soil quality. Native American women, who did not plow, grew maize. Because the maize seed is much larger than cereal grains such as wheat, it need not be planted in a finely prepared seed bed and thrives in no-plow conditions. Furthermore, no-plow agriculture enabled Native American women to cultivate maize along with beans and squash, crops that return nitrogen to the soil, thus allowing continuous cultivation, whereas plowed fields must be periodically left fallow. When maize fields later began to be plowed, maize yields from the same land soon declined.

The highlighted sentence serves to

- ☐ note the limitations of a particular distinction
- ☐ concede the plausibility of a particular hypothesis
- ☐ qualify a claim introduced in the preceding sentence
- ☐ acknowledge a factor that could undermine a causal explanation
- ☐ support a particular explanation of a finding

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In Schaller' s contradictory introduction to the book, she alternately applauds and _____ humankind' s role in animal conservation.

- ☐ authorizes
- ☐ endorses
- ☐ denounces
- ☐ discloses
- ☐ relates
- ☐ lambastes

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In the nineteenth century, the circus, for all its glitz and even its glamour, was entertainment with an old soul, _____ the fast-forward pace of change in modern life.

- ☐ a forerunner of
- ☐ an antidote to
- ☐ a respite from
- ☐ a break from
- ☐ a precursor to
- ☐ a rebuke to

Select two answer choices.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

Enlightened thinkers in late-eighteenth-century Europe broadly endorsed the concept of progress, yet theories of progress were usually _____ a strong streak of pessimism, a sense of the challenges inherent in the human condition.

- ☐ rooted in
- ☐ requisite for
- ☐ essential for
- ☐ contradicted by
- ☐ tempered by
- ☐ moderated by

Select two answer choices.

Questions 10 to 12 are based on this passage.

A significant proportion of meteorites contain *chondrules*, small, glassy silicate spheres. The importance of chondrules is that they show that at some time the temperature was so high that the chondrule material was vaporized. The vapor then cooled quickly and the liquid silicates, condensing out of the vapor, formed small silicate spheres under the influence of surface tension. When these spheres solidified, they were incorporated into silicate fragments, and the material was eventually compressed into rock by gravitational forces. The fact that the chondrules cooled very quickly is revealed by the composition of the minerals within them. In the vapor phase, whole minerals would not have existed, but there would have been components that, combined in various ways, can form different minerals. Combinations of these components produced an initial collection of minerals within chondrules when they formed and, while the silicate was hot, the components changed partners to form more stable minerals—meaning ones of lower energy. Given enough time, the minerals in chondrules would have had the lowest possible energy consistent with using all available components; the mixture of minerals would then be *equilibrated*. However, the mixtures of minerals in chondrules are *nonequilibrated*—corresponding to a total energy far greater than the minimum possible. This shows that the chondrules became solid and cooled so quickly that the nonequilibrated state became frozen in, since individual components did not have enough

Which of the following best describes the overall organization of the passage?

- ☐ A theory is presented, then evidence for and against that theory is discussed.
- ☐ A phenomenon is described, then details of that phenomenon are elaborated.
- ☐ An explanation of an empirical finding is questioned, then an alternative is offered.
- ☐ A possible event is described, then the probability of that event is estimated.
- ☐ An unusual occurrence is mentioned, then some possible causes are suggested.

Select one answer choice.

Questions 10 to 12 are based on this passage.

Importance of chondrules is that they show that at some time the temperature was so high that the chondrule material was vaporized. The vapor then cooled quickly and the liquid silicates, condensing out of the vapor, formed small silicate spheres under the influence of surface tension. When these spheres solidified, they were incorporated into silicate fragments, and the material was eventually compressed into rock by gravitational forces. The fact that the chondrules cooled very quickly is revealed by the composition of the minerals within them. In the vapor phase, whole minerals would not have existed, but there would have been components that, combined in various ways, can form different minerals. Combinations of these components produced an initial collection of minerals within chondrules when they formed and, while the silicate was hot, the components changed partners to form more stable minerals—meaning ones of lower energy. Given enough time, the minerals in chondrules would have had the lowest possible energy consistent with using all available components; the mixture of minerals would then be *equilibrated*. However, the mixtures of minerals in chondrules are *nonequilibrated*—corresponding to a total energy far greater than the minimum possible. This shows that the chondrules became solid and cooled so quickly that the nonequilibrated state became frozen in, since individual components did not have enough energy to jostle their way through the material to form more stable minerals.

Which of the following best describes the overall organization of the passage?

- ☐ A theory is presented, then evidence for and against that theory is discussed.
- ☐ A phenomenon is described, then details of that phenomenon are elaborated.
- ☐ An explanation of an empirical finding is questioned, then an alternative is offered.
- ☐ A possible event is described, then the probability of that event is estimated.
- ☐ An unusual occurrence is mentioned, then some possible causes are suggested.

Select one answer choice.

Questions 10 to 12 are based on this passage.

importance of chondrules is that they show that at some time the temperature was so high that the chondrule material was vaporized. The vapor then cooled quickly and the liquid silicates, condensing out of the vapor, formed small silicate spheres under the influence of surface tension. When these spheres solidified, they were incorporated into silicate fragments, and the material was eventually compressed into rock by gravitational forces. The fact that the chondrules cooled very quickly is revealed by the composition of the minerals within them. In the vapor phase, whole minerals would not have existed, but there would have been components that, combined in various ways, can form different minerals. Combinations of these components produced an initial collection of minerals within chondrules when they formed and, while the silicate was hot, the components changed partners to form more stable minerals—meaning ones of lower energy. Given enough time, the minerals in chondrules would have had the lowest possible energy consistent with using all available components; the mixture of minerals would then be *equilibrated*. However, the mixtures of minerals in chondrules are *nonequilibrated*—corresponding to a total energy far greater than the minimum possible. This shows that the chondrules became solid and cooled so quickly that the nonequilibrated state became frozen in, since individual components did not have enough energy to jostle their way through the material to form more stable minerals.

Which of the following best describes the function of the highlighted sentence in the context of the passage as a whole?

- ☒ It describes a condition that is required for a critical process discussed in the passage.
- ☐ It discusses an empirical possibility that is ruled out later in the passage.
- ☐ It presents evidence that confirms a suggestion made earlier in the passage.
- ☐ It helps reconcile two seemingly contradictory findings described in the passage.
- ☐ It outlines a feature common to several physical processes mentioned in the passage.

Select one answer choice.

Questions 10 to 12 are based on this passage.

A significant proportion of meteorites contain *chondrules*, small, glassy silicate spheres. The importance of chondrules is that they show that at some time the temperature was so high that the chondrule material was vaporized. The vapor then cooled quickly and the liquid silicates, condensing out of the vapor, formed small silicate spheres under the influence of surface tension. When these spheres solidified, they were incorporated into silicate fragments, and the material was eventually compressed into rock by gravitational forces. The fact that the chondrules cooled very quickly is revealed by the composition of the minerals within them. In the vapor phase, whole minerals would not have existed, but there would have been components that, combined in various ways, can form different minerals. Combinations of these components produced an initial collection of minerals within chondrules when they formed and, while the silicate was hot, the components changed partners to form more stable minerals—meaning ones of lower energy. Given enough time, the minerals in chondrules would have had the lowest possible energy consistent with using all available components; the mixture of minerals would then be *equilibrated*. However, the mixtures of minerals in chondrules are *nonequilibrated*—corresponding to a total energy far greater than the minimum possible. This shows that the chondrules became solid and cooled so quickly that the nonequilibrated state became frozen in, since individual components did not have enough

The passage suggests that the process of equilibration is facilitated by

- ☐ gravitational force
- ☐ gradual cooling
- ☐ surface tension
- ☐ stable minerals
- ☐ low energy

Select one answer choice.

At a certain high school, 60 percent of the seniors have a grade-point average of at least 3.0. Of the seniors with a grade-point average of at least 3.0, 95 percent have applied to college.

Quantity A

The percent of all seniors at the high school who have applied to college

Quantity B

55%

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$|2y - 5| < 1$$

Quantity A

y

Quantity B

1

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The median of the five measurements in set X is 65 and the median of the five measurements in set Y is 75. All ten measurements in sets X and Y are between 60 and 80.

Quantity A

The median of the ten measurements in sets X and Y combined

Quantity B

70

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

In plane P , point Q is on line l .

Quantity A

The number of points in plane P
whose distance from line l is 2 and
whose distance from point Q is 3

Quantity B

4

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

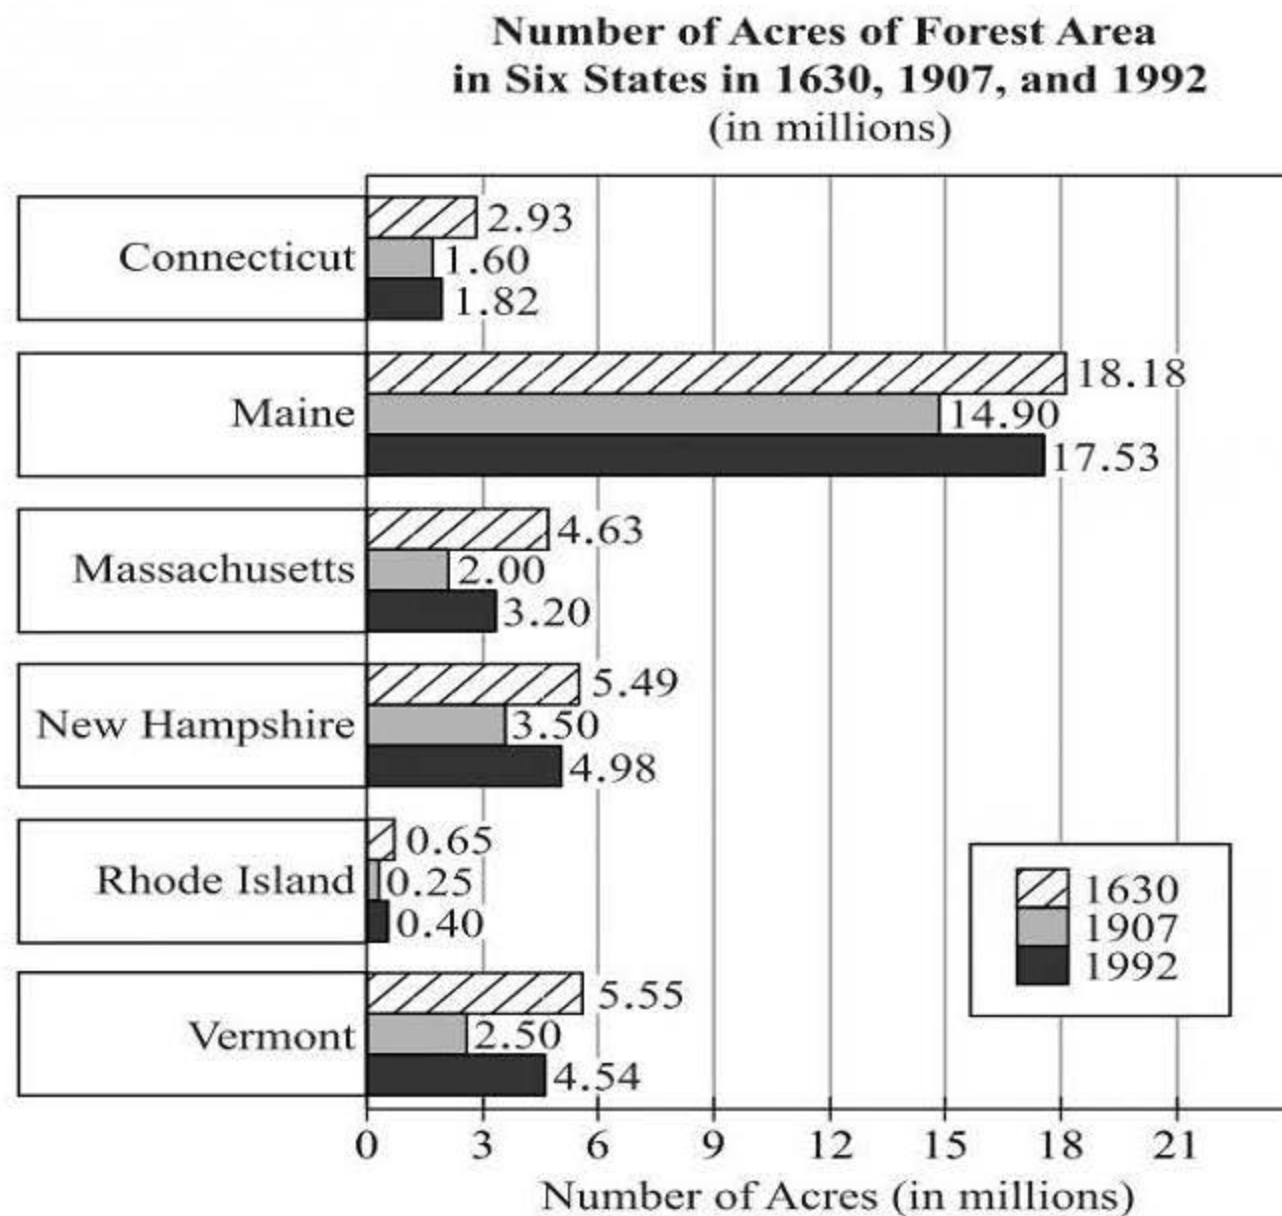

Select one answer choice.

If x and y are positive integers and $x < y$, what is the number of ordered pairs of the form (x, y) that satisfy $x + y = 16$?

- ☒ 7
- ☐ 8
- ☐ 14
- ☐ 15
- ☐ 16

Select one answer choice.

Questions 6– 8 are based on the following data.

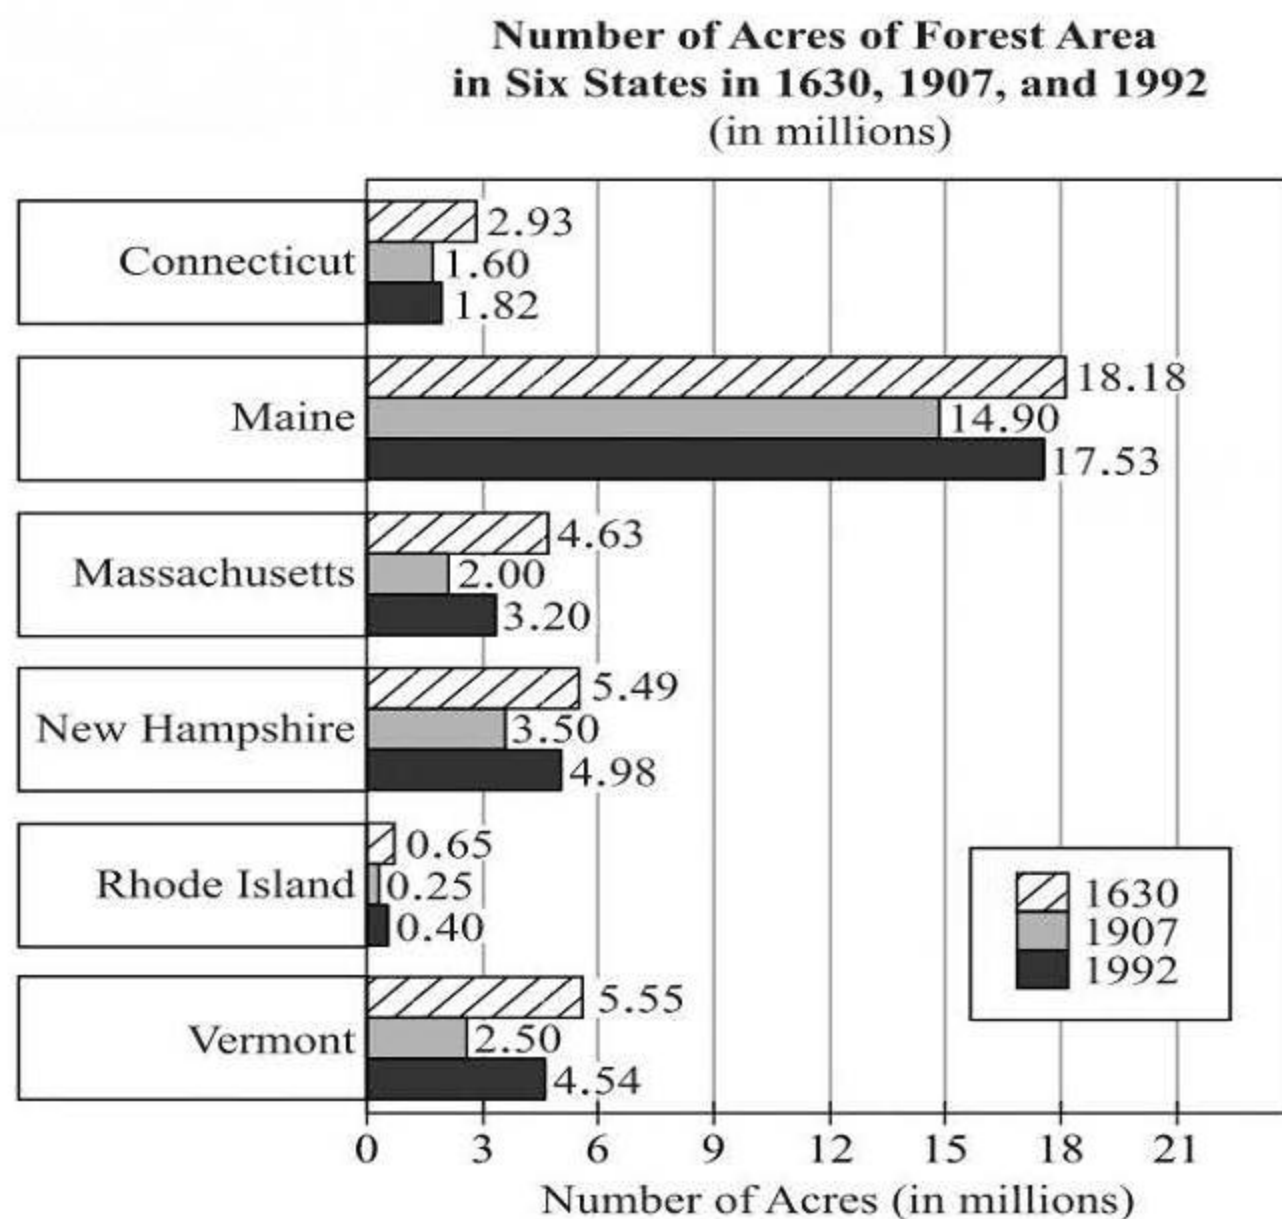

In Vermont the number of acres of forest area in 1992 was 76.5 percent of the total number of acres of land area. Which of the following is closest to the number of millions of acres of land area in Vermont?

- ☐ 1.69
- ☐ 3.47
- ☐ 4.65
- ☐ 5.93
- ☐ 6.49

Select one answer choice.

Questions 6– 8 are based on the following data.

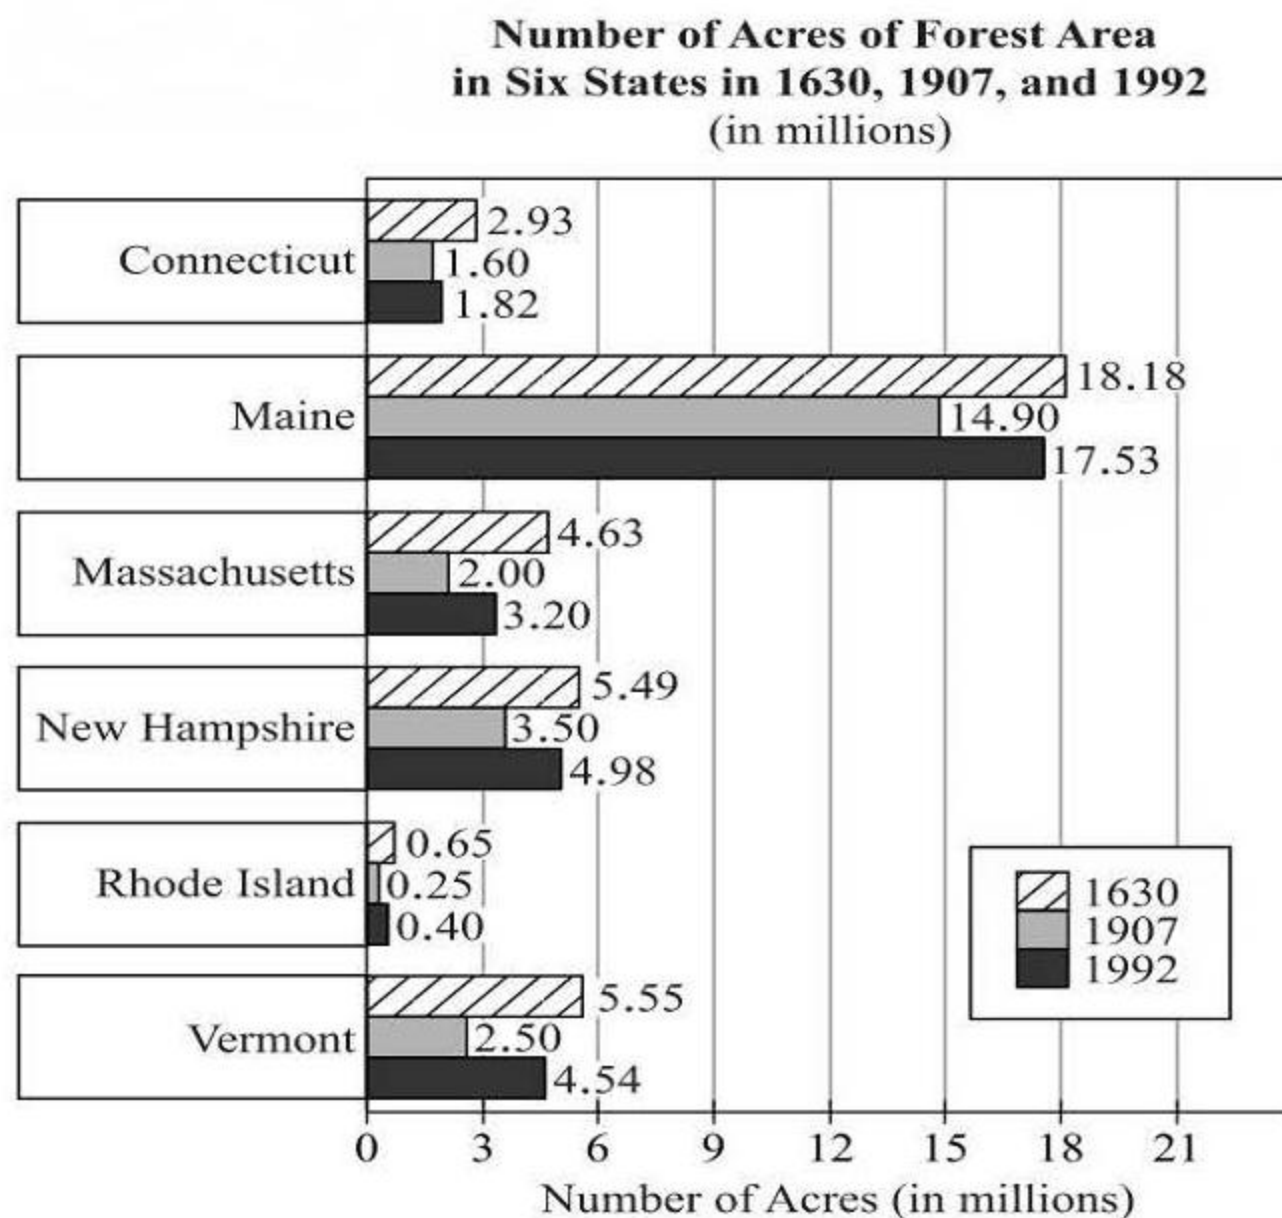

For Maine, which of the following is closest to the average annual increase in the number of acres of forest area from 1907 to 1992?

- ☐ 28,000
- ☐ 31,000
- ☐ 34,000
- ☐ 37,000
- ☐ 40,000

Select one answer choice.

Questions 6– 8 are based on the following data.

The number of acres of forest area in Rhode Island in 1992 was what percent greater than it was in 1907 ?

- ☐ 15%
- ☐ 25%
- ☐ 38%
- ☐ 42%
- ☐ 60%

Select one answer choice.

If x , y , and z are negative integers, which of the following must also be a negative integer?

☐ $(x + 1)(y - 1)(z - 1)$

☐ $(x + 1)(y + 1)(z)$

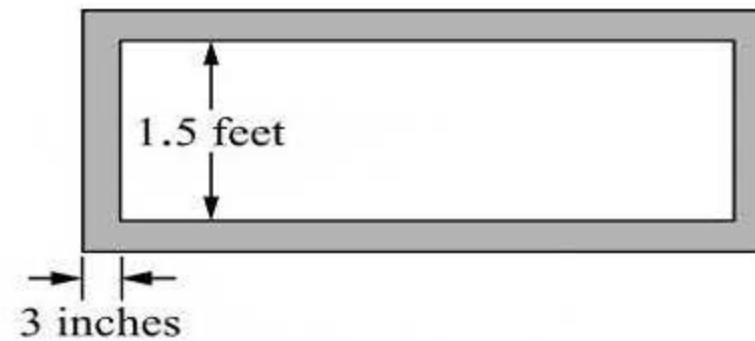

☐ $(x + 1)(y + 1)(z + 1)$

☐ $(x - 1)(y)(z + 1)$

☐ $(x)(y - 1)(z)$

Select one answer choice.

A certain rectangular painting is 1.5 feet high and 3 times as wide as it is high. The painting is to be framed by a wood frame that is 3 inches wide, as shown in the following figure.

Which of the following is closest to the minimum number of feet of 3-inch-wide wood framing that will be needed to frame the painting? (1 foot = 12 inches)

- ☐ 9
- ☐ 10
- ☐ 12
- ☐ 13
- ☐ 16

Select one answer choice.

Which of the following equations have a graph in the xy -plane that intersects the positive part of the x -axis?

Indicate all such equations.

☐ $y = x - 3$

☐ $y = 3x + 6$

☐ $y = (x - 1)^2$

☐ $y = x^2 + 2$

Select one or more answer choices.

A box contains yellow tennis balls and white tennis balls. The number of yellow tennis balls in the box is 10 more than the number of white tennis balls. If 2 of the yellow balls are replaced by 2 white balls, the ratio of the number of yellow balls to the number of white balls will be 4 to 3. What is the total number of tennis balls in the box?

Total number:

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

According to one view, works of literary fiction should faithfully reflect social reality, and adherents to this view tend to assume that social reality has only one face: a damaged and dysfunctional one. This view has had less impact on the musical arts, however. Composers are free to write music that is (i)_____ without being condemned for their (ii)_____. Yet writers, by contrast, are expected to (iii)_____ if they wish to be taken seriously.

Blank (i)

joyful
austere
esoteric

Blank (ii)

frivolousness
inaccessibility
pretentiousness

Blank (iii)

affirm idealism
eschew optimism
embrace realism

Select one entry from each column.

Questions 5 and 6 are based on this passage.

Agricultural historians theorize that farming originated when the pressures of growing populations or shrinking resources imposed the need to find new species to adapt for food. This hypothesis is supported by impressive work by anthropologists who have observed transitions to agriculture that happened in recent times. But, as an explanation for why agriculture arose in the first place, it seems ill matched to the facts of chronology. Extinctions—or even significant diminutions—in hunters' prey species cannot be shown to have happened in any of the right places at any of the right times. Populations certainly grew in the most dedicated farming cultures—but, in most places, more probably as a consequence than as a cause.

Consider each of the choices separately and select all that apply.

The author would likely include which of the following evidence in the “facts of chronology” ?

- ☐ The number of centuries separating the earliest transitions to agriculture from those observed by anthropologists
- ☐ The earliest dates for which evidence of farming practices has been established
- ☐ The known dates, if any, of extinctions of prey species that formed an important part of the diet of ancient human societies

Select one or more answer choices.

Questions 5 and 6 are based on this passage.

Agricultural historians theorize that farming originated when the pressures of growing populations or shrinking resources imposed the need to find new species to adapt for food. This hypothesis is supported by impressive work by anthropologists who have observed transitions to agriculture that happened in recent times. But, as an explanation for why agriculture arose in the first place, it seems ill matched to the facts of chronology. Extinctions—or even significant diminutions—in hunters’ prey species cannot be shown to have happened in any of the right places at any of the right times. Populations certainly grew in the most dedicated farming cultures—but, in most places, more probably as a consequence than as a cause.

The author of the passage would be most likely to disagree with the “agricultural historians” over whether

- ☐ preagricultural societies frequently adapted new species for food
- ☐ preagricultural societies were vulnerable to fluctuations in the populations of species they hunted
- ☐ the earliest transitions to agriculture resulted in population growth
- ☐ recent transitions to agriculture and the earliest such transitions were triggered by similar conditions
- ☐ the first adoption of agriculture immediately created dramatic changes in social structure

Select one answer choice.

Questions 7 to 9 are based on this passage.

To assess the impact of severe drought and drought-related fire on rain-forest vegetation, Leighton and Wirawan studied eastern Borneo following the 1982–1983 drought (when rainfall was nearly 70 percent below normal) by comparing postdrought data from various rain-forest plots with 1977–1979 data from the same plots. Some of the plots had been burned; others were only affected by drought. The large, normally evergreen canopy trees had begun shedding their leaves in February 1983 and were leafless when fires began in April 1983. The study revealed that canopy trees suffered more from drought than from fire: there was no difference in mortality between burned and unburned plots. Drought impact was greatest (37 to 71 percent of canopy trees killed) on steep slopes and ridges due to the limited water reserves of the shallow soil in such sites, while drought damage was least (11 percent of canopy trees killed) in a valley-bottom plot, which had deeper soil. Small trees and vines were largely unaffected by drought but were more easily killed by fire than were canopy trees. Thus, areas affected by drought alone witnessed a decline in larger trees' importance, whereas areas affected by drought and fire saw an increase in their relative importance because of their greater survival rate.

The primary purpose of the passage is to

- ☐ discuss the causes of the severe drought that struck eastern Borneo in 1982–1983
- ☐ assess the validity of data concerning the 1982–1983 drought in eastern Borneo by comparing it with data from 1977–1979
- ☐ examine the causal relationship between drought and fire in rain-forest environments
- ☐ evaluate the relative effects of drought and fire on plant life in rain-forest environments
- ☐ compare the relative importance of soil depth and water reserves to the survival of plant life in rain-forest environments

Select one answer choice.

Questions 7 to 9 are based on this passage.

To assess the impact of severe drought and drought-related fire on rain-forest vegetation, Leighton and Wirawan studied eastern Borneo following the 1982–1983 drought (when rainfall was nearly 70 percent below normal) by comparing postdrought data from various rain-forest plots with 1977–1979 data from the same plots. Some of the plots had been burned; others were only affected by drought. The large, normally evergreen canopy trees had begun shedding their leaves in February 1983 and were leafless when fires began in April 1983. The study revealed that canopy trees suffered more from drought than from fire: there was no difference in mortality between burned and unburned plots. Drought impact was greatest (37 to 71 percent of canopy trees killed) on steep slopes and ridges due to the limited water reserves of the shallow soil in such sites, while drought damage was least (11 percent of canopy trees killed) in a valley-bottom plot, which had deeper soil. Small trees and vines were largely unaffected by drought but were more easily killed by fire than were canopy trees. Thus, areas affected by drought alone witnessed a decline in larger trees' importance, whereas areas affected by drought and fire saw an increase in their relative importance because of their greater survival rate.

The passage's description of Leighton and Wirawan's research suggests that which of the following was required for a rain-forest plot to be selected for study?

- ☐ A wide variety of plant species and sizes
- ☐ A wide range of soil depths and water reserves
- ☐ Evidence of impact by both drought and fire
- ☐ Ease of access for gathering postdrought data
- ☐ Availability of data on predrought conditions

Select one answer choice.

Questions 7 to 9 are based on this passage.

To assess the impact of severe drought and drought-related fire on rain-forest vegetation, Leighton and Wirawan studied eastern Borneo following the 1982–1983 drought (when rainfall was nearly 70 percent below normal) by comparing postdrought data from various rain-forest plots with 1977–1979 data from the same plots. Some of the plots had been burned; others were only affected by drought. The large, normally evergreen canopy trees had begun shedding their leaves in February 1983 and were leafless when fires began in April 1983. The study revealed that canopy trees suffered more from drought than from fire: there was no difference in mortality between burned and unburned plots. Drought impact was greatest (37 to 71 percent of canopy trees killed) on steep slopes and ridges due to the limited water reserves of the shallow soil in such sites, while drought damage was least (11 percent of canopy trees killed) in a valley-bottom plot, which had deeper soil. Small trees and vines were largely unaffected by drought but were more easily killed by fire than were canopy trees. Thus, areas affected by drought alone witnessed a decline in larger trees' importance, whereas areas affected by drought and fire saw an increase in their relative importance because of their greater survival rate.

According to the passage, the conclusion that “canopy trees suffered more from drought than from fire” is based on data indicating that

- ☐ small trees and vines were largely unaffected by drought but were more easily killed by fire than were canopy trees
- ☐ canopy trees had already begun to shed their leaves when fires began in April 1983
- ☐ canopy trees that were affected by both drought and fire were no more likely to die than were those that were only affected by drought
- ☐ canopy trees that grew on steep slopes and ridges were more likely to die than were those that grew at the bottom of a valley
- ☐ canopy trees were more likely to be found growing in shallow soil with limited water reserves than in deep soil

Select one answer choice.

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

The safety features of modern cars have actually had _____ effect on people' s driving: drivers are lulled into a false sense of security by their cars' sophistication and therefore drive less attentively.

- ☐ an unintended
- ☐ an unaccountable
- ☐ an inconsequential
- ☐ a deleterious
- ☐ a negligible
- ☐ a pernicious

Select the two answer choices that, when used to complete the sentence, fit the meaning of the sentence as a whole and produce completed sentences that are alike in meaning.

In the midst of so many trenchant articles, anything as _____ as this essay is bound to stand out as an anomaly.

- ☐ vapid
- ☐ bland
- ☐ terse
- ☐ rapturous
- ☐ ironical
- ☐ succinct

Select two answer choices.

Question 13 is based on this passage.

Most Oakville residents want a community swimming pool to be built but do not want to finance it with local tax revenues. Oakville's mayor argues that although the town has no financial reserves, building a pool will not lead to higher taxes, since an unused town-owned land parcel is available and admission fees will cover the entire cost of operating the pool as well as repayment of the \$3 million debt for construction.

Which of the following, if true, most seriously weakens the mayor's argument?

- ☐ Admission to the community pool will cost most residents who frequently use it more than they would have paid in increased taxes for a pool open to all residents free of charge.
- ☐ Because of the types of accidents that can happen in and around swimming pools, the largest part of the operating expenses for the community pool will be lifeguards' salaries and liability insurance.
- ☐ The operation of a pool would bring increased traffic to the road leading to the site of the proposed pool and would require the town to fund costly road improvements.
- ☐ The same survey that established that a majority of Oakville's residents would use a community pool also found that over one-third of the town's residents would have preferred that it be built at a different site.
- ☐ Opponents of the pool have not advanced any other proposals for the use of the currently unused town-owned land parcel.

Select one answer choice.

Questions 14 and 15 are based on this passage.

That nineteenth-century European women sculptors seldom saw their work displayed in the most prestigious locations can be linked to the genres (portraits, mythological figures) and the formats (reliefs and life-size or smaller-scale sculptures) in which they worked. But what was cause and what was effect of these women's limited access to public space? Women sculptors rarely received commissions for the highest genre in the hierarchy of public sculpture: the huge historical equestrian monument in a public square. Women made some life-size statues, but these were seldom placed on high pedestals in open public spaces. Public sculptures by women usually do not seem to have been designed for the monumentality of public space; they are often, essentially, interior sculptures that may or may not have been placed outside.

According to the passage, which of the following statements about the sculptures produced by nineteenth-century women sculptors is true?

- ☐ They tended to command somewhat lower prices than similar works produced by male sculptors.
- ☐ They were more likely to be commercially successful when the gender of the sculptor was unknown.
- ☐ They often appeared to have been designed for relatively intimate spaces.
- ☐ They seldom included figures on horseback.
- ☐ They were often produced in materials that were not well-suited to endure in outdoor conditions.

Select one answer choice.

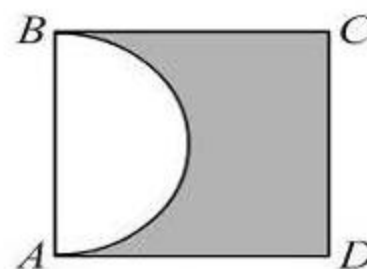

Questions 14 and 15 are based on this passage.

That nineteenth-century European women sculptors seldom saw their work displayed in the most prestigious locations can be linked to the genres (portraits, mythological figures) and the formats (reliefs and life-size or smaller-scale sculptures) in which they worked. But what was cause and what was effect of these women's limited access to public space? Women sculptors rarely received commissions for the highest genre in the hierarchy of public sculpture: the huge historical equestrian monument in a public square. Women made some life-size statues, but these were seldom placed on high pedestals in open public spaces. Public sculptures by women usually do not seem to have been designed for the monumentality of public space; they are often, essentially, interior sculptures that may or may not have been placed outside.

The passage suggests which of the following about the "life-size statues" ?

- ☐ They were often considered too large for interior spaces but not sufficiently prestigious to appear in public squares.
- ☐ They were typical of the work of women sculptors because women sculptors frequently received commissions for such works.
- ☐ Some of them depicted subjects that would conventionally have been depicted in formats smaller than life-size.
- ☐ Most of them were considered to fall outside the category of the highest genre in the hierarchy of public sculpture.
- ☐ Most of them were designed by sculptors who intended that they be displayed in open public spaces.

Select one answer choice.

Each side of square $ABCD$ has length 12, and AB is the diameter of the semicircle.

Quantity A

The area of the shaded region

Quantity B

$$144 - 18\pi$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

$$\begin{array}{c} k < 0 \\ 0.8 < x < 1.2 \end{array}$$

Quantity A

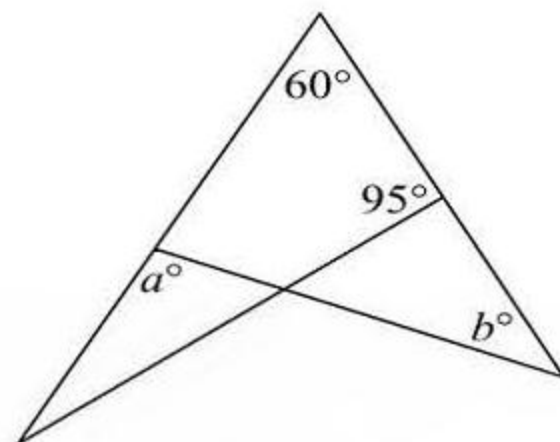

$$kx^2$$

Quantity B

$$kx^3$$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

Quantity A

a

Quantity B

$b + 55$

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

The function f is defined by $f(n) = 3n^2 + 2n + 5$ for all integers n .

Quantity A

Quantity B

The least value of $f(n)$ for all integers n

5

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

In a distribution of the heights of 50,000 people, the 40th percentile is 63 inches and the 64th percentile is 69 inches.

Quantity A

The 52nd percentile in the distribution

Quantity B

66 inches

- ☐ Quantity A is greater.
- ☐ Quantity B is greater.
- ☐ The two quantities are equal.
- ☐ The relationship cannot be determined from the information given.

Select one answer choice.

In the xy -plane, line ℓ has an x -intercept of 6 and a y -intercept of b , where $b > 0$. If the area of the triangle formed by the x -axis, the y -axis, and line ℓ is 15, what is the slope of line ℓ ?

- ☐ $-\frac{5}{6}$
- ☐ $-\frac{3}{5}$
- ☐ $-\frac{1}{2}$
- ☐ $-\frac{1}{3}$
- ☐ $-\frac{1}{6}$

Select one answer choice.

If the average (arithmetic mean) of the 20 numbers in a certain list is 12 and the average of the 10 numbers in another list is 6, what is the average of the 30 numbers in the two lists combined?

- ☐ 9
- ☐ 10
- ☐ 11
- ☐ 12
- ☐ 18

Select one answer choice.

The width and the length of a rectangular piece of plywood are 4 feet and 8 feet, respectively. Along one edge of the plywood, a strip x inches wide and 8 feet long is removed. Then, along an edge perpendicular to the 8-foot edge, a strip x inches wide is removed. For what value of x will the remaining rectangular piece have width and length in the ratio of 2 to 5 ? (1 foot = 12 inches)

- ☐ 4
- ☐ 8
- ☐ 12
- ☐ 16
- ☐ 20

Select one answer choice.

How many multiples of 5 are there from 55 to 505, inclusive?

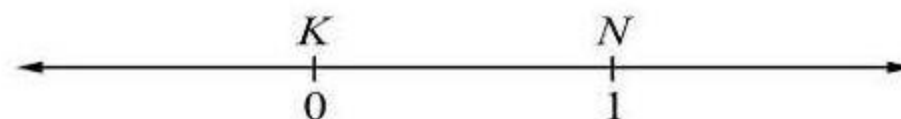

- ☐ 89
- ☐ 90
- ☐ 91
- ☐ 92
- ☐ 93

Select one answer choice.

A certain factory has 8 identical machines that process a certain chemical product at the same constant rate. If it takes 40 hours for 5 of the machines, working simultaneously at their constant rate, to process a total of one ton of the product, how many hours does it take the 8 machines, working simultaneously at their constant rate, to process a total of one ton of the product?

 hours

Enter your answer as an integer or a decimal in the answer box. Backspace to erase.

On the number line, point M (not shown) is between points K and N , and the coordinate of M is x . If the distance from K to M is the average (arithmetic mean) of the distance from K to N and the distance from M to N , what is the value of x ?

☐ $\frac{2}{7}$

☐ $\frac{1}{3}$

☐ $\frac{2}{5}$

☐ $\frac{1}{2}$

☐ $\frac{2}{3}$

Select one answer choice.

A survey was given to a sample of residents in a certain town to determine the level of interest in creating a new park. Of those residents in the sample, 50 percent responded they were in favor of the park and 30 percent responded they were not in favor of the park. The remaining 20 percent of the sample did not respond to the survey.

Which of the following statements individually provide(s) sufficient additional information to determine the number of residents in the sample?

Indicate all such statements.

- ☐ The number of residents in the sample who did not respond was 100.
- ☐ The number of residents in the sample in favor of the park was 2.5 times greater than the number who did not respond.
- ☐ The number of residents in the sample in favor of the park was 100 greater than the number not in favor of the park.

Select one or more answer choices.

If an investment of \$2,000 at a simple annual interest rate of r percent yields \$150 in interest in one year, what is the value of r ?

- ☐ 0.075
- ☐ 0.15
- ☐ 0.75
- ☐ 1.5
- ☐ 7.5

Select one answer choice.

A box contains 100 purple balls, 100 red balls, and 100 white balls. What is the minimum number of balls that must be chosen to ensure that at least 4 of the balls chosen have the same color?

- ☐ 5
- ☐ 9
- ☐ 10
- ☐ 12
- ☐ 13

Select one answer choice.

In the xy -plane, line n has x -intercept h and y -intercept t , where h and t are positive numbers. Which of the following points must lie on line n ?

Indicate all such points.

☐ $(h, 0)$

☐ $(0, h)$

☐ $(t, 0)$

☐ $(0, t)$

☐ (h, t)

☐ $\left(\frac{h}{2}, \frac{t}{2}\right)$

Select one or more answer choices.
